

MEMORANDUM.

THE birth and death-returns from the principal Municipalities in Bengal furnish the following results for the week ending 11th June 1887.

1. That births and deaths were registered at the rates, respectively, of 17·1 and 21·7 per 1,000 of population, as opposed to 15·9 and 19·8 per 1,000, respectively, during the preceding week ending 4th June, indicating a sensible improvement in the registration of both the events.

2. That these events were returned at the highest rates by the following Municipalities:—

<i>Births.</i>		<i>Deaths.</i>	
	Ratio per mille.		Ratio per mille.
Arrah	78·9	Puri	52·5
Comillah	46·2	Bhagulpore	44·4
Purneah	31·1	Gya	41·7
		Beaulah	31·5
		Arrah	29·9

3. That in comparison with the results of the preceding week, there was a noticeable enhancement of mortality from cholera; and only small differences in the casualty-rates from the rest of the death-causes, *vide* figures given below:—

					Ratio per mille during the weeks ending—	
					11th June 1887.	4th June 1887.
Cholera	3·3	2·3
Small-pox	·2	·1
Fever	8·4	8·5
Bowel-complaints	2·9	2·1
Injuries	·3	·2
Other causes	6·6	6·3

4. That of the diseases abovenamed, cholera, fever and the maladies coming under the head of "Other causes" proved conspicuously fatal in the following Municipalities, and small-pox only in the Puri town, where the death-rate from it stood at 6·3 per 1,000 of population:—

<i>Cholera.</i>		<i>Fever.</i>		<i>Other causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	14·7	Beaulah	23·6	Gya	21·9
Bhagulpore	11·8	Bhagulpore	19·9	Serampore	15·7
Arrah	8·4			Puri	14·7
Monghyr	6·3			Bhagulpore	11·8
Suburbs of Calcutta	4·8				
Gya	4·8				
Mozufferpore	3·6				
Patna	2·9				

5. That the mortality in relation to *Sex*, *Class* and *Age*, stood as noted below—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	23·2	Christians	4·3	Under 1 year	17·9

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives as before, as it was not necessary to recalculate them. The time has consequently been calculated on the revised population under all heads in the above table except "4.46c," the ratio under which have been omitted. Inasmuch as the census of the Europeans was not taken for the same period as the census of the natives, the ratio of the Europeans to the natives is not shown.

[illegible]

MEMORANDUM.

DURING the week ending 18th June 1887, births were registered in the principal Municipalities in Bengal at the rate of 17·3 per 1,000 of population, as opposed to very nearly the same proportion, viz. 17·1 per 1,000 in the preceding week ending 11th June, and deaths at 18·0 per 1,000 against 21·7 per 1,000, indicating a considerable falling off in the registration of the latter events.

2. The following Municipalities returned the highest proportions of births and deaths:—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Arrah	74·2	Puri	44·1
Chittagong	37·6	Gya	36·2
				Bhagulpore	29·0

3. The following table indicates that, as compared with the outcome of the preceding week, there was a diminution of mortality, to a more or less extent, from every death-cause, excepting fever, which exhibited a sensible enhancement, and small-pox and injury, the death-rates from which remained stationary:—

				Ratio per mille during the weeks ending—	
				18th June 1887.	11th June 1887.
Cholera	2·4	3·3
Small-pox	·2
Fever	7·0	8·4
Bowel-complaints	2·9	2·9
Injury	·3	·3
Other causes	5·9	6·6

4. Of the diseases above indicated, cholera, bowel-complaints and the maladies returned under the head of "Other causes" proved conspicuously fatal in the following Municipalities:—

<i>Cholera.</i>			<i>Bowel-complaints.</i>		<i>Other causes.</i>	
		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	...	16·8	Puri	10·5	Gya	17·1

ANNUAL REPORT ON THE ADMINISTRATION OF CIVIL JUSTICE IN THE SONTAL PERGUNNAHS FOR 1886.

RESOLUTION.

JUDICIAL.

Calcutta, the 11th July 1887.

READ—

The Annual Report on the Administration of Civil Justice in the Sontal Pergunnahs for the year 1886.

Read also—

The Reports for the years 1884 and 1885, and the orders of Government recorded thereon.

The following statement shows the progress of civil litigation during the past three years :—

	INSTITUTED			DISPOSED OF			PENDING		
	1884.	1885.	1886.	1884.	1885.	1886.	1884.	1885.	1886.
Civil suits	6,605	5,258	5,841	6,408	5,517	5,550	894	635	926
Rent	3,583	3,280	2,258	3,611	3,446	2,167	406	239	330
Title	2,873	2,993	2,705	2,432	2,718	2,988	763	1,039	756
Civil execution	3,470	3,130	3,301	3,401	3,416	2,858	823	537	980
Rent	2,431	2,857	1,922	2,185	2,345	1,855	703	715	782
Title	791	665	874	738	727	714	159	97	257
Total	19,813	17,683	16,901	18,835	18,169	16,132	3,748	3,262	4,031

The increase in the number of civil suits, and the large decrease in the number of rent-suits, are both attributed to the same cause, namely, the sale question. The explanation is intelligible in the former case, as a large number of title-suits were instituted to set aside sales of land, public feeling being much disturbed on this subject, and the legality of such sales being widely questioned. But it is not so easy to understand how the sale question had the effect of reducing the number of rent-suits. Perhaps the explanation is to be found in the fact, alluded to in paragraph 10 of the Commissioner's report, that many vendors of land remained on as bhaolidar tenants of the purchasers, and that the latter did not care to file rent-suits while their titles as purchasers were being assailed in the courts. The Deputy Commissioner also states that the number of rent-suits diminished owing probably to the good harvests. As regards the sale question, it is only necessary to remark here that an enquiry has been made, and that the special reports submitted by the Deputy Commissioner and the Commissioner are under the consideration of this Government in the Revenue Department.

2. *Practice and Procedure.*—Both in the report for 1885, and in his present report, the Commissioner has expressed apprehensions lest the simplicity of the special rules in force in the Pergunnahs should be supplanted by the elaborate and tedious procedure of the Civil Courts in Regulation districts; and the Deputy Commissioner also thinks that possibly the case-work is being done in too elaborate a manner, and states that he has endeavoured, as far as possible, to encourage simplicity in the method of its disposal. Sir Stuart Bayley is inclined to think that, if executive administration is being sacrificed to a press of judicial work, the fault must lie not so much in the laws as in the officers who administer them. The principle embodied in the civil rules is quite inconsistent with any sacrifice of substance to form, their object being, as was laid down by their first originator, the late Sir George Yule, "to cause speedy and just decisions with not more of form than is necessary to secure justice." The Commissioner justly remarks that, if these rules are adhered to, there need be no cause for complaint. At the same time the Lieutenant-Governor is not disposed to agree with the Commissioner in thinking that short written statements of claim should be received only in exceptional cases. The rules permit a plaintiff to make his claim *visà voce* or by means of a brief written statement, and it is doubtless often convenient and desirable that a claim should be presented in writing. Petition-writers are required to take out licenses, and so long as the courts have the power of fixing their number, there is no reason why such competition should spring up among them as to make them degenerate into toutts and case-mongers. The increased demand for processes is a feature which should be discouraged as far as the rules permit; but no doubt some such increase must be naturally expected from year to year. The rules permit a suitor to serve processes himself, or through the heads of villages in which witnesses reside, and it is stated that many suitors would avail themselves of this privilege, but that the vernacular establishments are overworked, and the suitors would, therefore, have to wait some time. As the petition-writers are licensed and thoroughly under the control of the courts to which they are attached, there appears to be no reason why they should not be allowed to write out the processes on forms supplied to them. This would save the time of the amla and expedite the course of justice; and the Commissioner is requested to report if such a plan cannot be introduced at all events experimentally. Sir Stuart Bayley notes with satisfaction that the Deputy Commissioner has made a stand against the unnecessary elaboration of judicial work. Appearance by agent should not be permitted except for special reasons: postponements, which are as expensive to Government through its officers as to the parties themselves, should only be allowed when justice requires them: arbitration should be encouraged in complicated cases: the staff of process-servers should be closely supervised: and, as the proportion of cases appealed is very small, it should be the object of deciding officers not to write lengthy judgments to fortify the record, so to speak, against a possible appeal, but to make it as brief and succinct as is compatible with the supply of supplementary information, in case an appeal should actually be instituted. The record should be enough to show any reasonable man that the facts of the case have been fairly enquired into, the grounds of decision, and no more.

There are cogent reasons of policy and expedience for the performance of the executive and judicial work of the Sontal Pergunnahs by the same officers; and if, as the Commissioner justly remarks, an officer sits trying civil suits all day long inside four walls, he is not likely to be conversant with what is going on in the interior of his sub-division. The Lieutenant-Governor fully agrees with the Deputy Commissioner that the more good executive work an officer does, the more is he likely to reduce his judicial work by nipping quarrels in the bud; while, as to those cases that do come before him, a thorough knowledge of his sub-division and of the people in it conduces to their more speedy and satisfactory disposal. The Judicial is of no less importance than the Executive work, and must be properly and carefully disposed of; but Sir Stuart Bayley looks to the Commissioner to see that the one is not altogether sacrificed to the other. It was alleged in the report for 1885—and the point is again pressed on the attention of Government in the report under review—that the large employment of barristers and pleaders in what may be called the plains portion of the Sontal Pergunnahs tends to the introduction of lengthy and more elaborate procedure, and that laws which are necessary in more advanced districts are not adapted for a simple race. As regards the last allegation, Sir Stuart Bayley can only repeat and endorse the answer given by this Government to a similar complaint made by the Commissioner as long ago as 1873, that where particular laws have been introduced, this has been done deliberately, and that they will not be withdrawn unless it is shown that real and serious evils result in practice from their operation, which cannot be got over by good and discreet officers. It will not suffice to show that indiscreet officers thirsting for technicalities may abuse the Acts; in that case the officers will be changed, and not the laws. As to the larger employment of legal practitioners, it is only in suits exceeding the value of one thousand rupees that they can appear as a right (proviso to section 2, Act XXXVII of 1855), and the total number of such suits must be very few, while the number in which Sontals are parties must be even fewer. This, then, is a matter over which the courts have full control.

3: *Civil Suits*.—The increase in the number of civil suits, that is suits for money and moveable property, was common to all sub-divisions except Dooghur and Rajmehul. The Deputy Commissioner has referred to the operation of the usury clauses in section 6 of Regulation III of 1872, and the Commissioner remarks that there is nothing new to be said on the matter, that the clauses are still in force, not being affected, *quoad* cases not exceeding Rs. 1,000 in value, by the High Court ruling in the case of Ram Narain Naik. In this the Commissioner is correct: but the Lieutenant-Governor does not understand the Deputy Commissioner to question the applicability of those clauses, but merely to entertain doubts as to their correct interpretation. This is a matter on which orders cannot well be passed in a Resolution; if the Commissioner thinks it necessary, a special report can be submitted.

4: *Rent-suits*.—The number of rent-suits decreased from 3,250 to 2,258. There has been a steady decrease in these suits since 1880, when the number was as high as 10,994. As was remarked in paragraph 15 of the Commissioner's report for 1881, many of these were suits in which questions of title were involved, and the large diminution has been due to the action of the settlement in determining such questions. Again, it was stated in paragraph 3 of the Resolution on the report for 1882:—"The Commissioner observes that the majority of the suits appearing hitherto under the head of rent-suits were really *jote*-suits, that is, suits in which the tenants, for the time virtually proprietors, contended among themselves for possession of disputed plots." Moreover, the rule that a tenant who sub-lets can recover no more than the settlement rent recorded in respect of the land must tend to prevent the institution of rent-suits. The very large decrease during the year under review is no doubt partly due to a good harvest; and partly to the transfer of the Rohini estate to the Court of Wards, which now collects rents under the certificate procedure. The fact that *bhaoli* tenures are so much in vogue shows that ryots will sometimes freely give to the mahajan more than the latter can gain in the courts. These tenures are said to be extremely common in those villages where sales have been numerous, the vendors holding on as *bhaolidars* under the mahajan purchasers. As the courts will only decree the recorded settlement money

rents, the prevalence of such holdings indicates the existence of good feeling and a considerable amount of confidence between creditor and debtor. As remarked in paragraph 3 of the Resolution on the report for 1885, the Lieutenant-Governor would like to have some more detailed information as to the extent of such phaoi holdings, and the causes for their increase.

5. *Title suits.*—The number of title-suits was 2,705 in 1886 as compared with 2,993 in the preceding year. Under this head the Deputy Commissioner remarks that many suits of an unusual character have been contributed by the sale question. As has been stated above, the sale question is under the Lieutenant-Governor's consideration and will be separately dealt with. Owing to the uncertainty which had for some time hung over the question, the large number of 257 execution proceedings remained pending in title cases against only 97 in the previous year. "The Courts," it is said, "are opposed to sales of land while it is still uncertain how far these will be legal, and proceedings hang fire."

6. *Appeals.*—There is no appeal as of right, but under rule 42 of the Rules of Civil Procedure, the Sub-divisional Officers, the Deputy Commissioner and the Commissioner have power to revise the proceedings of their subordinates. These powers of revision should not, however, be converted into regular appeals. Out of over 10,000 cases disposed of, appeals were instituted in 893, 539 appeals being from subordinates in sub-divisions to the Sub-divisional Officers, and 354 being to the Deputy Commissioner. This latter number would not have been so large but for the uncertainty of the law on the sale question, 242 out of the 354 appeals being in title-suits. Of the appeals to Sub-divisional Officers, Deoghur accounts for nearly half. The orders of the lower courts were upheld in about 50 per cent. of the appeals, and there were reversals in only 47 cases; many cases had to be remanded owing to the difficulties attending the sale question. Of the appeals to the Deputy Commissioner, 307 were actually heard—30 decrees being reversed and 150 confirmed, while there were 127 remands. The largest number of appeals came from Deoghur, where litigants are said to be very obstinate, and where, besides the disputes among the Pundas, there are other burning questions, such as the right to fell timber and the sale of mustagiri rights. 67 applications for revision were made to the Commissioner, which, with 28 pending cases, gave a total of 95 cases for disposal. Out of 73 cases disposed of decrees were reversed in 10 only, and 26 cases were remanded. It is not stated whether there were any appeals to the High Court.

7. *Receipts of Courts.*—The receipts of the courts during the year amounted to Rs. 72,025-8 as compared with Rs. 73,905-13 in the previous year, a decrease which does not call for any special explanation. The Deputy Commissioner has not yet found time to submit the report called for in paragraph 6, of last year's Resolution on the subject of the valuation of suits. The Lieutenant-Governor hopes to receive it at an early date. It is of great importance that there should be complete uniformity in the administration of the Courts Act.

8. The present Deputy Commissioner only joined the district in June 1886, and this furnishes some excuse for the fact that his report is defective in important particulars. The report for the present year should contain fuller information regarding execution proceedings, and other matters of interest should be noticed, such as the relation of landlords and tenants, the position of headmen, the nature of suits instituted, and the action of the courts on the well-being of the Sontal people.

9. In conclusion, the Lieutenant-Governor is of opinion that the administration of the Sontal Pergunnahs is being carried on not only cheaply but efficiently. The work requires a special training, and many of the officers employed have spent much of their service within the district. The Civil and Criminal judicial work, and the whole of the executive work of the district, are carried on by the same officers. Of the nine officers vested with civil powers corresponding to a Munsif, four draw less, and two not more, than probationer Munsifs. One draws the pay of the lowest grade of Munsifs, and two others that of the second grade. Of the seven officers exercising the powers of a Subordinate Judge, one receives the pay of a

third grade Munsif, two that of a first grade Munsif, and another less than that of the lowest grade of Subordinate Judges. The remaining three receive less than the pay of a second grade Subordinate Judge. The facts mentioned by the Deputy Commissioner in paragraph 20 of his Report show that some increase of establishments is required, and the Lieutenant-Governor will await the receipt of a definite proposition statement. The Lieutenant-Governor notices with satisfaction the good work done by the Sub-divisional Officers of Godda and Pakour. The remarks concerning the merits of other officers will be noted in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Chief Secretary to the Government of Bengal.

LIBERALITY OF BABOO HARO CHANDRA CHAUDHURI IN AID OF EDUCATION.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 12th July 1887.

RESOLUTION.

READ—

An endorsement from the Director of Public Instruction, No. 4227, dated the 27th June 1887, forwarding a letter from the Inspector of Schools, Eastern Circle, Dacca.

BABOO HARO CHANDRA CHAUDHURI, a zemindar of Sherepur, in the Mymensingh district, has promised a contribution of Rs. 100 a month towards the maintenance of the Sherepur Victoria Academy, which, in commemoration of the Jubilee year of the reign of Her Majesty the Queen-Empress of India, has been raised from the status of a middle English school to that of a high school. He has also made a donation of Rs. 900 to improve the accommodation of the school.

2. The Lieutenant-Governor tenders his thanks to Baboo Haro Chandra Chaudhuri for his liberality.

ORDER.—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Director of Public Instruction for information, and for communication to the donor.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

The following is published for general information.

P. NOLAN,

Secretary to the Government of Bengal.

**ADMINISTRATION REPORT OF THE METEOROLOGICAL REPORTER
TO THE GOVERNMENT OF BENGAL, FOR THE YEAR 1886-87.**

THE Department was under my control during the first half of the official year, when Mr. John Eliot, the permanent Meteorological Reporter to the Government of Bengal, returned from furlough and took over charge of the duties from the 24th September 1886, from which time up to the end of the year he remained in charge. Mr. Eliot has since been appointed to officiate for Mr. Blanford as Meteorological Reporter to the Government of India, with effect from the 6th May, and it has therefore fallen upon me as Officiating Meteorological Reporter to the Government of Bengal to submit this annual report.

There has hardly been any change of importance in the administration of the Department during the year under review. The system of working adopted in previous years has been steadily maintained, and fairly complete registers of observations have been received from almost all the meteorological stations under my control in Bengal and Assam. This standard of work is kept up by frequent inspection of the observatories either by the Reporter or the head clerk, and by a careful and critical inspection of the observations sent in to the head office. During the year under review it has been found advisable, in order to enforce attention to certain cases of neglect and carelessness in taking the readings of the instruments, to institute a system of small fines on the observers for reporting incorrect observations. It has been found that this system is far more effective than the former plan of simply writing reprimanding letters. Incorrect readings of the instruments are now comparatively rare. The Superintendents of the observatories, whose duties are in most cases honorary, have also afforded much help to the Department in supervising the work of the observers; and have contributed in no small degree to the accuracy of the returns.

The number of observatories in Bengal and Assam from which returns were received in this office during 1886-87 were—

- 1 First class.
- 2 Second „
- 21 Third „
- 26 Provincial third class.

Inspection of Observatories.—The following stations were inspected during the year :—

By Mr. Eliot—

Patna.	Furrêdpore.	Rungpore.
Gya.	Pogra.	Julpigoree.
Chupra.	Dacca.	Mymensingh.
Motibari.	Darjeeling.	
Durbhunga.	Dinagpore.	

By Mr. Dallas, Assistant Meteorological Reporter to the Government of India—

Dacca.	Dhubri.	Purneah.
Mymensingh.	Sibsagar.	Tezpoore.
Cachar.		

By myself—

Raneegunge.

Burdwan.

Bankoora.

By my head clerk—

Rampore Beaulah.

Chupra.

Berhampore.

Bogra.

Motihari.

Arrah.

Dinagepore.

Bhagulpore.

Krishnagar.

Julpiguri.

Bankipore.

Serajgange.

Delree.

It will thus be seen that a large number of the stations have been inspected this year. Some of them had to be visited twice, either because of unsatisfactory readings, or that the condition of the observatory required a second visit. These were Dacca, Mymensingh, Chupra, Patna, Motihari, Julpigoree, Bogra, and Dinagepore.

First Class Observatory.—Alipore.—As this observatory is under the direct superintendence of the Meteorological Reporter to the Government of India no report can be given on its working during the past year. It can, however, be said that the Daily Weather Reports and the monthly meteorological registers were received with much punctuality and correctness throughout the year.

Second Class Observatories.—The following are the second class observatories that report to this office:—

Second Class Observatories.

STATIONS.	Superintendents.	Superintendents' allowances.	Observers.	Observers' allowances.	Assistant observers.	Assistant observers' allowances.
		Rs.		Rs.		Rs.
Dhubri	Surgeon Edwin Dobson, M.B.	30	Munshi Kadim-uddeen Ah. m.e.l.(a) Bahoo Baidya Nath Banerjee.(b)	30	Munshi Kafayat-ulla.	10
Sanger Island	Nil.	Nil.	Mr. R. H. Peters (c) Mr. C. Williams (d)	45	Nil.	Nil.

(a) Dismissed on 23rd August 1886.

(b) Appointed since 24th August 1886.

(c) From 1st April 1886 to 7th January 1887. On three months' leave.

(d) „ 8th January 1887 to 31st March 1887.

Of these two, only Dhubri observatory was visited on the 9th, 10th, and 11th August 1886 by Mr. Dallas, Assistant Meteorological Reporter to the Government of India. In accordance with the decision come to last year as the result of my inspection of this observatory, Munshi Kadimuddin Ahmed, who was found to be unfit for the duties of the head observer, was dismissed on the 23rd August 1886. His place was filled from August 24th by Babu Baidya Nath Banerjee, who received a course of practical training at the Alipore Observatory in the use of the several instruments, and in the Meteorological Office in the work of preparation of the various registers. During the visit of Mr. Dallas the old Observer continued to hold office. The condition of the observatory was not satisfactory. Mr. Dallas reported—“There was a bad leakage in the roof of the Casella tower. On the morning of the 10th the water was pouring on the clock work of the anemometer, and will, if not stopped, eventually ruin it.” The leakage was at once stopped by the District Engineer, but the Superintendent has reported that with the setting in of the rains in the year 1886-87 the leakage has again appeared. Unless the anemograph house can be effectually repaired, it will be impossible to keep the self-recording Casella's anemograph in working order. Owing to this cause there have been several breaks in the traces of the anemograph during the year, and the instrument has not been working very satisfactorily. It is hoped that

this observatory will materially improve under the care of the new observer and of the paid Superintendent. The returns during the year have been received punctually, and have been found generally correct.

Saugor Island was not visited during the year. The observatory was found to work very satisfactorily. Fortin's barometer, No. 1315, which was in use since 15th March 1885, was reported to leak badly on the 31st May 1886. Newman's marine barometer belonging to the light-house was used from that date till the 19th June 1886, when Fortin's barometer, No. 626, was brought into use. A set of comparative readings was taken with the marine barometer, and the Fortin's standard supplied, in order that the readings reported from the former might be reduced to the Indian standard. A carefully compared aneroid barometer, No. 1773, has also been supplied to the observatory to serve as a spare instrument in cases of sudden breakage or injury to the instrument in use. The anemograph at Saugor Island, which is one of Beckley's pattern, has worked satisfactorily throughout the year, and there have been no breaks. Mr Peters the observer has worked very well and has done good service during stormy weather in reporting the additional observations required. In consideration of his services he has been granted a good service allowance of Rs. 5 a month, with effect from 1st April 1887.

Imperial Third Class Observatories.—These are 21 in number—14 are situated in Bengal, 1 (Akyab in Burmah, 4 (Sibsagar, Silchar, Tezporé and Tura) in Assam, and 2 (Gopālpore and Coconada) in Madras. The two last are maintained in connection with the Bay of Bengal Storm Signal Service.

The following table gives the names of the Superintendents and observers at the observatories during the year 1886-87:—

Imperial Third Class Observatories.

STATIONS.	Superintendents.	Observers.	Observers' allowances.
Akyab ...	Nil	Mr. F. B. Atkinson (a) M. McSweeney (b) A. H. Prime (c) McDonough (d)	15
Berhampore	Civil Surgeon	Baboo Mahendra Nath Roy	15*
Burdwan ...	Ditto	Mokhoda Prasad Chowdhry	15*
Chittagong ...	Nil	Mr. J. E. Gabriel (e) J. J. Brown (f)	25
Coconada ...	Port Officer	C. J. M. Gactane	15
Cuttack ...	Nil	H. W. Alley (g) Frederick Stone (h)	25
Dacca ...	Nil	T. W. De Souza (i) T. R. H. Wayne (j)	15
Darjeeling ...	Rector, St. Paul's School	F. N. Rushton	25
Demagiri ...	Medical Officer	Baboo Girish Chandra Bhar (k) " Srish Chandra Sarkar (l)	Voluntary.
Durmānga ...	Civil Surgeon	Jogin Chandra Banerjee	Do. †
False Point ...	Nil	Mr. J. Loudon	20
Gopālpore ...	Port Officer	" J. Sumasirow Naidoo	15

Sibsagar ...	Civil Surgeon	" Dandadhar Dutta Barua	30*
Silchar ...	Ditto	Ramesh Chandra Bhadra	15†
Tezporé ...	Ditto	Mir Sabdar Ali	15
Tura ...	Civil Medical Officer	Abdul Majeem	Voluntary.

(a) 1st April to 12th June 1886. Transferred to Bengal.

(b) 13th June to 20th July and 1st September to 31st October 1886.

(c) 21st July to 31st August.

(d) 1st November 1886 to 31st March 1887.

(e) 1st April to 2nd June 1886 and 21st August 1886 to 31st March 1887.

(f) 3rd June to 20th August 1886.

(g) 1st April to 18th May 1886.

(h) 19th May 1886 to 31st March 1887.

(i) 1st April to 28th November 1886 and 8th December 1886 to 31st March 1887.

(j) 29th November 1886 to 7th December 1886.

(k) 1st April to 5th October 1886 and 8th January to 31st March 1887.

(l) 6th October 1886 to 7th January 1887.

(m) 1st April 1886 to 30th April 1886.

(n) 1st May 1886 to 31st March 1887.

* Has special allowance of Rs. 10 a month for meritorious service

† Has special allowance of Rs. 5 a month for good service.

At Hazaribagh; Cuttack, Darjeeling and Chittagong the self-recording anemographs have been kept up as hitherto. In the first two stations, Casella's pattern instruments are used, and in the third and fourth, Beckley's instrument. The records were most complete in the case of Hazaribagh and Chittagong. In the former there was a short break of 17 hours only during the year, for cleaning.

The Chittagong observer, writing under date the 26th February 1887, reported that "during the severe nor'wester at 4 A. M. this morning, which was accompanied with thunderstorm and hail, a large piece of heavy bamboo matting from an adjoining roof was thrown against the anemograph structure on the office roof, bringing down the whole of the exposed machinery. The cups, rods and the wind vanes have been bent and broken." These were repaired locally, and the instrument again began to work from the 1st March 1887 from 2 P. M. There was therefore a break from 26th February to 1st March.

At Cuttack there have been several breaks in the anemograph traces. These are apparently due to want of attention on the part of the Telegraph Master, Mr. Stone.

Darjeeling.—The traces have not been so continuous as could be desired, but this has been due to a great extent to the fact that the anemograph is not a very satisfactory one. Mr. Carter, the Superintendent, and the observer have worked hard to try to obtain more distinct traces, but they have unfortunately not been very successful.

Of the 21 Imperial third class observatories, 11 were inspected during the year, viz., Berhampore, Burdwan, Dacca, Darjeeling, Durbhanga, Gya, Patna, Purneah, Sibsagar, Silchar, and Tezporo.

Berhampore was visited by my head clerk on 11th August. He reported that the observatory was in an excellent condition. Baboo Mohendra Nath Roy continues to be the observer. His readings are always accurate, and the special allowance of Rs. 10 which he holds is well deserved. A solar radiation thermometer was stolen from the observatory grounds, while under exposure, on the 2nd January 1887, but the thief could not be discovered. A new instrument was brought into use from 3rd January 1887.

Burdwan was visited by myself on the 7th April 1886. The condition of the observatory was satisfactory. The personal allowance of Rs. 10 was therefore continued to the observer, Baboo Mokhada Prosad Chowdry.

Dacca was twice inspected, first by Mr. Dallas on the 26th of July 1886, and then by Mr. Eliot on the 15th March 1887. Mr. Dallas condemned the big dial wind-vane which was on the centre of the roof, and ordered the removal of the rain-gauge to a different site, as it was liable to be inundated by the overflowing of the Boreegunga river; and this was actually the case on the 28th August 1886. A Roorkee pattern small-sized vane was supplied. Mr. Eliot selected the position of the new instrument. Mr. Eliot found everything in good order, except the grass thermometer, in which a small portion of the column (about 1°) was detached. It was put right.

Darjeeling.—Mr. Eliot visited the station on the 10th and 11th March 1887. He reported—"The instruments and shed were all in good order. The anemograph is working fairly; the instrument is, however, by no means a satisfactory one, and requires constant care to keep it in working order. The bed plate of the upper part of the instrument appears to be very considerably warped, and hence it is necessary to insert wedges in order that the cog wheels may work into each other. The traces were very good and distinct. The tracing spiral of one of the cylinders had become slightly bent, and the sharp end which was thus turned over was tearing the paper. This defect will be rectified as speedily as possible by the observer. The observer is a very sharp and intelligent young man, and takes the observations exactly, and shows much interest in the anemograph." After Mr. Mooro, the former observer, had left the station, the observer's allowance was reduced to Rs. 15, with effect from May 1886, to equalize the pay with that of all third class observers. In consideration of the fact that the observer has to look after the anemograph, which is situated at a distance from the observatory, and which requires constant care and attention to keep it in order, the allowance has again been raised to Rs. 25 a month, with effect from the 1st January 1887.

Durbhanga was visited by Mr. Eliot on the 25th December 1886. The instruments and shed were generally in good order. The anemometer was condemned and a new instrument supplied.

Gya was visited by Mr. Eliot on 22nd December 1886. The officiating observer, Mukund Lal, was examined and found to be competent. He was trained at the Patna observatory before being appointed. The observatory was in fair order. Prior to this visit, in November 1886 the officiating observer was fined the full value of a wet minimum thermometer which had been broken by gross neglect and carelessness. The dry minimum thermometer had a deposit of about ten degrees of spirit in the upper part, which explained the cause of the very low readings of the instrument from 1st August to October 1886, when the instrument was recalled and put into order and then again brought into use from 26th December 1886. Thus there was a long break due to the rejection of erroneous readings recorded by the observer.

Patna was visited by my head clerk on the 3rd August 1886, and subsequently by Mr. Eliot on the 21st of December 1886. Surjun Sing was officiating as observer in place of Munshi Mohabhtlal, who was under suspension from August 1886. The observatory was not in good order when examined by the head clerk, nor was the observer found to be very competent. Mr. Eliot found that the observer, and the condition of the observatory had improved materially in December 1886. The instruments were quite clean and all in proper order. The shed was newly repaired, and the observer read the instruments correctly.

The Patna observatory is now working well. At present the work of reduction and tabulation of the observations from Patna is being carried on in the Calcutta office, and the allowance for the observer has been reduced to Rs. 20. The observer has to take the synoptic observations in addition to the regular work of the observatory.

Purneah was visited by Mr. Dallas on the 25th and 26th August 1886. Generally speaking, the observatory was in good condition, so far as the observer and the instruments were concerned. Mr. Dallas reported that the anemometer was very much sheltered to the east and north by high trees, and proposed that both anemometer and wind vane should be removed to the south-west corner of the jail building. This change of position of the instruments has been made from the 20th January 1887. The wind registration previous to this must therefore be of doubtful value.

Sibsagar was visited by Mr. Dallas on the 17th August 1886. He found the observatory in good working order. He compared the barometer with a standard taken from Calcutta, and found the previously determined correction had remained unaltered. He condemned the position of the meteorological shed. He writes—"The thermometer shed is situated in a hollow 3 or 4 feet below the level of the ground on which the station is built. In consequence there is far from a free circulation of air, and as the slope is from south to north, the shed has an undue northern exposure, and the temperature is distinctly lower than over the open ground around the tank. The shed is surrounded by high jungle, and the readings of the thermometers can hardly be taken as representative of the temperature of the surrounding country." The seismometer was reported to be not working at all, as it had failed to give indications of earthquakes, although the shocks were sufficient to crack buildings so as to render them unsafe.

Baboo Dandadhar Dutt Barua continues to be the observer. He receives a ten-rupee special allowance.

Silchar was visited by Mr. Dallas on the 2nd August 1886. The condition of the observatory was reported to be good. The observer was also found to be a competent man. The instruments were all found to be in working order. A sharp shock of earthquake occurred at 11-25 A.M. on May 19th, 1886, occasioning considerable damage to several lungalows in the station, but the seismograph failed to give any indication. The observer was trained in the methods of reading and recording the indications of the instrument.

Tezporé was visited on the 14th August 1886. This is the first visit of inspection since the observatory was started (April 1885). Mr. Dallas reports—"The thermometer shed is situated on the summit of a hill 200 or 300 feet

above the level of the river, and is the highest point around. The position is exceedingly good. The river runs on the southern side, and a level wooded plain surrounds the west, north, and east sides of the hill. The anemometer was clean and moving freely. The wind-vane was apparently true, and also running easily, but there was no means of getting up to it." Some arrangement must be made to enable the observer to oil the instrument from time to time.

The barometer is placed in a room in the jail. The sun thermometer and grass thermometer were stolen in June 1886, while under exposure. Dr. Campbell, the Superintendent of observatory, suggested that a chowkidar should be appointed to watch the instruments, but Mr. Blanford, the Meteorological Reporter to the Government of India, decided that radiation thermometers should not in future be used at this observatory.

Many readings from this observatory have had to be rejected as erroneous, and the observer was careless and did not understand his work. These errors have been repeatedly pointed out, and the present observations are now fairly good.

The rest of the observatories could not be visited, viz., Akyab, Chittagong, Coconada, Cuttack, Demagiri, False Point, Gopalpore, Hazaribagh, Jessore, and Tura. Their condition can only be judged from the registers furnished, which appear to show that the observers have generally maintained their character for accuracy of observations.

At Akyab the shed has been thoroughly repaired during the year.

The observer at Chittagong deserves mention, not only for the care and attention he has bestowed on the anemograph, but also for the correctness of his observations.

From Coconada the reports were regular and generally satisfactory.

The Cuttack observatory, under the Telegraph Master, Mr. Stone, was in a very inefficient state, and either through his carelessness or want of knowledge, many instrument readings have had to be rejected during the course of the year. The anemograph was also allowed to get out of order from want of attention. Mr. Stone has now been transferred from Cuttack.

Demagiri.—This is a voluntary station, having only the ordinary thermometers and a wind-vane as instruments under observation. It cannot be considered a satisfactory station.

False Point.—This observatory has worked well during the year under Mr. London.

Gopalpore has sent in registers and telegrams regularly throughout the year, and the observations have been very satisfactory. The Port Officer appears to take a very lively interest in the work of the observatory.

Hazaribagh.—This is one of the best kept observatories in Bengal. Observer Nathoo Lal has submitted very satisfactory readings throughout the year. The anemograph was kept in working order throughout. The special allowance of Rs 5 drawn by the observer is therefore well deserved.

Jessore.—The condition of the observatory has improved materially, and the observations have been correct. The observer's personal allowance, which was withheld for six months last year for neglect of duty, was restored from 1st October 1886.

Tura.—This is a voluntary station recording thermometric and wind observations only. It has improved very materially in the character of its observations and in the reports submitted.

Provincial Third Class Stations.—The following table gives the names of the third class Provincial observatories which have been working during the past year, together with the names of the Superintendents and observers:—

Provincial Third Class Observatories.

STATIONS.	Superintendents.	Observers.	Observers' allowances.
Arrah ...	Superintending Engineer, { Sone Circle.	Babu Satis Chandra Banerjee } (a) ...	10
Balasure ...	Executive Engineer ...	" Haradhan Chatterjee ...	10

The observatories generally have worked very well during the year, and the work has gone on very smoothly. There were very few changes in the observers, and the readings were generally fairly trustworthy. The observatories inspected were—

Arrah,	Dinagepore,	Rampore Beaulah,
Bankoora,	Furreedpore,	Ranigunge,
Bhagulpore,	Julpiguri,	Rungpore,
Chupra,	Krishnagar,	Serajgunge,
Bogra,	Motihari,	
Dehree,	Mymensingh,	

or 16 out of the 26 stations have been under inspection during the year.

Arrah was visited on the 3rd July 1886. The returns from this observatory were highly satisfactory, and the condition of the observatory reflects much credit on the Superintendent and the observer.

Bankoora was visited by myself on 4th April. This is a voluntary observatory. This was the first visit of inspection since its establishment. The observatory is situated on one of the highest points of the station, which is in itself one of the highest parts of the surrounding country. The whole of this district is of undulating nature with light friable soil, and the natural drainage should be very good. On the north side of the station, at about a distance of $1\frac{3}{4}$ miles from the observatory, a river called Gandeshari flows, and another small river, the Darkeshar, about half a mile to the south and south-east of the observatory. The plain in which the observatory is placed is fairly open, and it is close to and on the north side of the jail. The observatory should therefore yield very valuable observations. There were a few defects in the exposure of the instruments, and the observer showed a want of knowledge of how to keep them in order; but since the inspection, the character of the work appears to have materially improved.

Bhagulpore was visited on the 9th August 1886. The object of the visit was to settle the question of certain continued low readings of the barometer, but, so far as can be ascertained, these comparatively low readings are correct, and represent a peculiar abnormal feature. The observatory was in good order.

Chupra was visited on the 4th and 5th August 1886 by my head clerk, and by Mr. Eliot on 23rd December 1886. Mr. Eliot found the instruments in good order.

Bogra was visited on the 10th May 1886 by my head clerk, and on 14th March 1887 by Mr. Eliot. In the former visit the anemometer was condemned. Mr. Eliot found the observatory in good order, and the instruments all very neat and clean. The observer, Babu Gangadhar Barik, was trained at Alipore, and is a good observer.

Dehree was visited on the 1st August 1886. The instruments were in good order.

Dinagapore was inspected on the 13th May 1886 and 7th March 1887 by my head clerk and Mr. Eliot, respectively. The shed and the instruments were found in good order. Mr. Eliot found that the observer read the barometer a little low.

Furzedpore was inspected by Mr. Eliot in February 1887. The instruments were all in good order, and the observer read them accurately and readily.

Julpaiguri was inspected on the 10th March 1887. The observatory was in a very satisfactory condition.

Krishnagar was inspected on the 2nd February 1887 by my head clerk. He found the instruments clean and in good order. The defects noticed in the last Administration Report were rectified.

Motihari was visited on the 24th December 1886. The instruments were found to be in good order.

Mymensing was visited by Mr. Dallas on the 27th July 1886 and by Mr. Eliot on the 16th March 1887. Both of them found the instruments of the observatory in fairly good order.

Rampore Beaulah was visited on the 7th May 1887. The shed was removed from its former position in the grounds of the Executive Engineer's office to the compound of the post-office. The barometer has been placed in the post-office in good light, protected by a wire cage. The wind instruments are on the roof of the office. This change was necessary, as the Executive Engineer's office was removed near the post-office. The rain-gauge was far away from the shed. These instruments have since been localised. The shed in its present position is 13 yards from the embankment of the river Pandma.

Kanecgunge was inspected by myself on the 6th April 1886. It was in satisfactory condition.

Rungpore was visited by Mr. Eliot on the 8th March 1887. The observatory was not so clean as it ought to have been. The officiating observer read the instruments correctly.

Serajgunge was visited by my head clerk on the 4th February 1887. The observatory was not in so satisfactory condition as it ought to have been. Amongst other things, the wind-vane was unserviceable.

The remaining stations could not be visited. But the returns from the majority of these stations were satisfactory.

Rain-record stations.—The number of stations reporting rainfall during the year 1886-87 has been 249, which shows an increase of four stations over those of the preceding year. The stations which have been added are Akhirigunge (Moorshedabad), Debigunge (Julpigoree), Bickram and Halsa (Patna district). The returns were received very punctually and regularly in the majority of cases, except from some of the stations, such as Gop, Pipli and Salipore in the Orissa Division, and the stations Kaliagunge, Gondwara and Balorampore in Purneah district, and Jhalda in Manbhoom.

Instruments.—The following table shows the number of instruments that have been broken or lost or rendered unserviceable, and the number of instruments replaced during the year 1886-87 at the Imperial and Provincial observatories:—

Return of instruments broken or withdrawn and issued to the observatories for 1886-87.

(a) Supplied.

(b) Broken.

(c) Withdrawn for defect.

The list shows that the instruments have, on the whole, been very carefully looked after, and there have been very few breakages due to wilful neglect of duty on the part of the observers either of the Imperial or Provincial observatories.

Office establishment.—There was only one change in the office establishment during the year, due to the death of Baboo Nibarun Chandra Chatterjee, 3rd clerk. I regret much to have to notice his death, as in him the office has lost a most trustworthy and useful assistant. Baboo Jati Lal De has taken his

place as 3rd clerk, and the office staff consisted of the following clerks on the 31st March 1887:—

• Baboo Chandi Charan Chatterjee, Head clerk and inspector of observatories; Purna Chandra Mookerjee, 2nd clerk; Jati Lal De, 3rd clerk; Tabulators Baboos Kaminy Mohun Bose, Debendra Nath Banerjee, Joggeshur Roy, Bireshur Mookerjee, Rakhal Das Chuckerbutty, Ashutosh Roy Chowdhury, Hari Das Mozumdar, Hem Chandra Goswamy, Charu Chandra Mookerjee; draughtsman Baboo Nagendra Lal Pal.

The whole of the office staff has worked extremely well throughout the year under the very efficient superintendence of the Head clerk, Baboo Chandi Charan Chatterjee.

The regular reports and maps, &c, issued by the Department during the year have been precisely the same as those issued in the year 1885-86, and which are described on page 16 of the Administration Report of that year.

During the year 1886, 2,158 letters were received and 3,131 letters were issued, or about the same number as in the previous year. The reduction and tabulation of the 10 A.M. and 4 P.M. observations taken at the 23 Imperial stations, and of the 10 A.M. observations taken at 26 Provincial 3rd class stations, and also of the daily synoptic readings taken at the observatories of Patna, Chittagong, Sibsagar, Dhubri, Hazaribagh, and Cuttack, have all been steadily maintained. The Patna and Hazaribagh registers are now being worked out in the Calcutta office.

A small establishment of three temporary clerks at a monthly pay of Rs. 20 each was sanctioned during the year for a period of four and a half months to prepare books for working out the daily mean pressure and maximum and minimum temperature of the 22 Provincial observatories which have furnished more than three years' data since their establishment, and also of the Assam stations, Sibsagar, Dhubri, and Silchar, since their commencement. This work has now been accomplished, and in the daily meteorological returns and reports these normal values are being utilized.

The entry of the rainfall observations taken at the 79 new revenue stations has not yet been made in the usual form of record books for deducing averages, and this will have to be undertaken in 1888 in a similar manner to the preceding.

It will thus be seen, the work of the office continues very heavy. The same difficulty was felt as in the previous year in keeping the work of the office precisely up to date, and if it had not been for the employment of the temporary assistance referred to, there would probably have been an accumulation of arrears.

Storm-signals.—It was only necessary to hoist the signals once during the year, namely, on June 15th and 16th. They were hoisted to indicate the existence of a cyclonic storm which was formed at the head of the Bay of Bengal on the 13th June, and after intensifying considerably, moved in a north-westerly direction, the centre passing near Saugor Island, and then through South-West Bengal, Chutia Nagpur and South Behar. Night signal No. 10 was hoisted at 2.30 A.M. of the 15th at the signal stations in the river Hughli, and it was followed by day signal No. 6, denoting that a small cyclonic storm was advancing up the Bay and will cross the coast north of a line joining False Point and Chittagong. Notices were also given to the Port Commissioners, Calcutta, and the Port Officers at Calcutta, Balasore, Chandbali, and False Point. Notice of the hoisting of the signals was also given in the *Telegraph Shipping Gazette*. At 5.25 P.M. orders were given to hoist day signal No. 9 to be followed by night signal No. 11, danger signal, indicating the approach towards Saugor Roads of a cyclonic vortex of small extent of the kind which forms during the rainy season. The Executive Engineers at Balasore and Midnapore were also informed. At 7 o'clock of the morning of the 16th the centre of the storm reached the coast very close to Saugor Island and slightly to the east of it, and as it was still advancing in a northerly direction, the only available warning signal No. 12 for the Port of Calcutta was hoisted, signifying the existence of a cyclone the centre of which was near Saugor, and that the storm was probably advancing towards Calcutta. This signal was the only one that I could possibly use to apprise the Calcutta Port of the storm in question. This signal is, however, intended for use only in the approach of storms of great magnitude and intensity, and though I was aware that the storm was not one of the very intense and fierce cyclones which

are generated perhaps once in ten years, yet I was certain that the storm was of sufficient intensity to make it very dangerous for shipping to move in the river and in the port, and hence this signal was hoisted. At midday of the 16th, the centre of cyclonic storm was between Saugor and Calcutta, and was advancing in a north-westerly direction. Information was received at 2-55 P.M. that the flagstaff at Mud Point was broken by the wind force and the storm signals could not be again hoisted at this station. On the 17th the storm centre proceeded inland through Midnapore and the adjacent districts, and the storm signals which were hoisted at the port and at the river stations were therefore ordered to be lowered at 4 A.M. of this day, and the Port Officers at Balasore and Chandbali were informed accordingly.

A considerable number of smaller and more feeble cyclonic storms and barometric depressions occurred during the prevalence of the south-west monsoon over the Bay. A rather severe, but small cyclone was also formed during the first advance of monsoon winds up the Bay which broke on the Madras coast, and also a curious series of three fierce cyclonic storms was formed in the Bay in November and December, all of which crossed the Madras coast, following approximately similar courses. The principal depressions formed in this year are as follows:—

1. *Storm of May 23rd and 24th.*—This was formed off the south Madras coast, and at some little distance to the east or south-east of Madras on May 22nd and 23rd. By 10 A.M. of the 24th the storm was advancing over the coast line between Negapatam and Madras, and the centre of the storm, which probably passed not very far from Pondicherry, was almost on the coast at this time. It was a storm of considerable diameter, and was very fierce near the centre. The S.S. *Tibre* was involved in the storm. At 2 P.M. of the 23rd the Meteorological Reporter, Madras, and the Port Officers at Negapatam, Masulipatam, Coconada, and Vizagapatam were telegraphed to the following effect:—“Cyclonic storm south-east of Madras and apparently approaching coast.” At 1-10 P.M. on the 24th, it being found that the cyclone was crossing the Peninsula, the following telegram was despatched to the Meteorological Reporter, Bombay:—“Cyclonic storm of considerable intensity crossing Peninsula south of Madras.” By the morning of the 25th the storm had entirely passed inland, and it afterwards apparently passed into the Indian Ocean. It gave heavy rainfall on its onward march to Negapatam and adjacent places.

2. *Feeble depression of 1st June.*—At the close of May there formed off the Pegu coast a storm which reached the South Bengal coast on June 1st, the centre passing between Saugor Island and Chittagong. The centre on the 2nd was not very far from Burrisal, and it then advanced inland and filled up, giving very heavy rain to South-East Bengal.

3. *Depression of 6th and 7th June.*—This depression was also very feeble. It formed off the Pegu coast about the 6th of June, and on the 7th advanced inland near Akyab and between this station and Chittagong. It also brought up heavy rain to South-East Bengal.

4. *Depression of 9th to 20th July 1886.*—During the whole of the eleven days of the existence of this depression, which was formed at the head of the Bay, winds were more or less cyclonic in direction, though light in force. The storm possessed little strength till about the 16th, when it had slightly intensified. On this day the centre, as far as could be judged, was to the east of False Point and almost to the south of Saugor Island. On the 17th the small storm had again distinctly intensified, and was a little to the north of False Point. It then passed inland, bringing heavy rain in its advance. On the 18th the centre was considerably to the north of Cuttack, and moving in a north-westerly direction. It filled up and disappeared on the 20th.

5. *The depression of 16th to 20th August.*—This was formed off the Ganjam coast on the 16th. It was a feeble storm as judged by the barometric depression, but which gave a heavy sea and very bad weather over that part of the Bay. It passed inland to the north of Gopalpore on the 19th.

6. *The feeble depression of 13th to 17th September.*—It was formed in the north-west angle of the Bay on the 13th, and crossed the Orissa coast on the evening of the 15th, and passed into Chutia Nagpur on the 16th, when it broke up.

7. *The feeble depression of 18th to 24th September.*—This was formed in the north-west angle of the Bay. The centre passed inland between False Point

and Balasore on the evening of the 21st. It gave heavy rain to Orissa and South-West Bengal and South and Central Behar.

8. *Depression of 24th to 30th September.*—This was formed off the Arakan and Pegu coasts on the 24th, but did not begin to influence the Bengal coast until the 27th, when it was approaching the Ganjam coast. It gave heavy rain to Orissa and South-West Bengal, and moderate rain to Behar and Chutia Nagpur.

9. *Depression of 18th and 19th October.*—This was formed in the centre of the Bay and moved towards the Ganjam coast, which it crossed early in the morning of the 20th and drifted westwards into the interior. The Port Officers at Gopalpore and Vizagapatam were apprized of the existence of the storm on the 18th. It gave heavy rain to the west coast of the Bay.

10. *Storm of 6th to 13th or 14th November.*—A definite cyclonic vortex showed itself on the 5th or 6th in the centre and south of the Bay. It marched to the west-north-west, and struck the Madras coast, the centre crossing the coast a little to the north of Madras shortly before noon on the 9th. It advanced across the Peninsula unbroken, and then passed into the Arabian Sea, marching to the north-west. The Peninsular and Oriental Company's steamer *Peshawar* was involved in it on the 13th. At 3-15 p.m. on the 7th the Master Attendant, Madras, and the Port Officers, Gopalpore and Coconada, were apprized of the formation of the cyclonic storm, and at 2-45 p.m. of the 8th, telegrams announcing the storm were sent to the Master Attendant, Madras, the Port Officers at Gopalpore and Coconada, to Weather Bombay, and to A. V. Nursing Rao, Esq., Vizagapatam, to the following effect:—"The cyclonic storm I warned you about yesterday appears to be of large extent and of considerable intensity. The centre is advancing westward, and will probably strike the coast north of Madras and between Madras and Masulipatam within the next 24 hours."

11. *Storm of 18th to 24th November.*—This was formed in the Martaban Gulf, and it passed into the Bay of Bengal to the north of Andamans. The centre of the disturbance was in about 16° north latitude, and 89° east longitude at noon of the 22nd, and $16\frac{1}{2}^{\circ}$ north latitude and $84\frac{1}{4}^{\circ}$ east longitude at noon of the 23rd. It struck the coast between Vizagapatam and Coconada late on the evening of that day, and broke up a few hours afterwards. At 2-50 p.m. of the 22nd, the following telegram was despatched to the Port Officers at Gopalpore, Vizagapatam, Coconada, Masulipatam, and Master Attendant, Madras, and also to Mr. A. V. Nursing Rao:—"A cyclonic storm, accompanied by very strong winds, has formed near the Andamans, and is moving apparently towards the mid-west coast of Bay. It is probably not of large extent; advisable to watch weather." On the 23rd, at 2-35 p.m., the following telegram was addressed to the same officers:—"Present cyclonic storm is approaching the coast of the Circars between Gopalpore and Coconada, and the centre will probably cross the coast near Vizagapatam within the next 24 hours. Storm is apparently of small extent and diffused in character, but accompanied with strong winds." On the 24th, at 2-30 p.m., the following message was sent to the Meteorological Reporter, Bombay:—"Cyclone travelling westward; crossed the coast of the Circars late yesterday evening. The storm appears to be small and diffused in character."

12. *Storm of 7th to 9th December.*—A small storm or cyclone was formed in the south of the Bay on the 7th. It advanced a little to the north of west and struck the Madras coast on the afternoon of the 9th, and shortly after disappeared. It gave very strong winds and very high sea. The Port Officers, Coconada, Masulipatam, Negapatam, and Madras, and Meteorological Reporter, Bombay, were apprized of the existence of the storm.

Daily Weather Report.—The Bay of Bengal reports of the Storm Signal Service were published every day without any break during the year. The Lithographic Branch of the Survey Department supplied the printed skeleton report forms. There has been no change in the number (20) of the reporting stations over the Bay area. The telegrams were received very regularly from almost all the stations, except that occasional delays have happened in the case of Diamond Island telegrams, particularly during stormy weather.

Mr. A. V. Nursing Rao has continued to favour the Department with the daily observations taken at Vizagapatam, the telegrams from which station are received very punctually. The thanks of the Department are therefore

due to him for his continued valuable assistance in connection with the Storm Signal Service.

This report was supplied to 39 Government officers and 22 subscribers paying at the rate of Rs. 2 a month. The receipts from subscribers during the year have covered the cost of printing the reports in this office and of distributing them. There was a balance of Rs. 96-1-3 at the end of the year 1886-87. This amount was kept in hand to meet urgent demands for repairs to the lithographic presses, &c.

The Bengal Daily Weather Reports were published in the year 1886 during the period 27th April to 4th November; 38 stations sent in daily observations by means of telegrams for this report. The report was distributed to 98 Government officials and 19 subscribers.

In accordance with the sanction of the Government of Bengal, the stations of Sibsagar, Dhubri, and Silchar will be added to the number of reporting stations for the Bengal Daily Weather Report for 1887.

Special work.—During the year a full report on the False Point cyclone of 22nd September 1885 was completed by me, and published as volume IV, Part II, of the Indian Meteorological Memoirs.

Expenditure.—The following statement gives the expenditure on account of the Bengal Meteorological Department during the year 1886-87, and the total grants sanctioned by Government under each of the various heads:—

Financial statement for 1886-87.

HEAD OF EXPENDITURE.					Actual expenses incurred during 1886-87.	Budget grant for 1886-87.
					Rs. A. P.	Rs. A. P.
Meteorological Reporter's allowance	5,400 0 0	5,400 0 0
Office establishment	5,963 7 11	7,092 0 0
Office rent (included in the India Office budget)
Observers	{	Telegraph masters	2,050 0 0	9,120 0 0

METEOROLOGICAL OFFICE, BENGAL, }

The 16th June 1887.

ALEXANDER PEDLER,

Offg. Meteorological Reporter to the
Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 9th July 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Burdwan, July 9, '87	2.21	General rain. Prospects, which were not good, are much improved by the general rain now falling. Common rice sells at about 23 seers per rupee. Public health fair.
	Culra	0.60	
	Cutwa	2.90	
	Rancegunge	1.09	
	2 Bankura, " 9, '87	2.21	
Bishenpore	0.77	Weather—seasonable. Transplanting of paddy has begun on low lands. More rain wanted. Prices stationary. Public health good.	
3 Beerbhoom, " 9, "	5.01		
Rampore Hant	2.18		
4 Midnapore, " 9, '87	1.37		
5 Hooghly, " 9, "	0.73		
Serampur	2.38	Weather—unusually dry during the week. Heavy rain falling at the time of report has come in time to prevent damage to seedlings and to enable rice cultivation to go on. Public health good.	
Jehanabad	3.00		
Howrah, " 9, "	3.55		
Oolscheriah	1.35		
There has been some steady rain during the week. Prospects favourable and operations of the season in progress.			
Central Districts.			
PRESIDENCY DIV.	6 24-Parghs., July 12, '87	5.67	Weather—hot and cloudy with occasional heavy showers. Prospects of crops satisfactory. Transplantation going on. Public health generally good.
	7 Nudda, " 9, "	0.78	
	Kushitea	1.86	
	Meherpore	2.70	
	Chandanga	4.50	
	8 Khoolia, " 9, '87	0.65	Weather—cloudy with scanty rain. Rice crop in Satkhira is said to want rain, but elsewhere rainfall is sufficient and prospects are favourable. Public health good.
	9 Jessore, " 9, "	1.2	
	Jhenidah	2.09	
	Magurah	1.34	
	Nurail	0.17	
	10 Moorshedabad, " 9, '87	3.27	Weather—hot and close. Prospects of crops good, but more rain is wanted. Public health good.
	Lalbagh	2.37	
	Kandi	3.27	
	Jungipur	3.34	
	11 Dinapore, " 9, '87	5.33	
	Thakurgaon	2.92	Weather—very hot. Rain at intervals. Sowing of <i>amun</i> almost over. Jute and sugarcane thriving well. Public health good.
	12 Rajshahye, " 9, '87	2.92	
Natore	3.06		
Nowgong	2.02		
13 Raupore, " 9, "	3.03		
Gulbanda	0.96	Weather—hot, cloudy and showery. Prospects of crops, where not injured by floods, are favourable. Harvesting of <i>til</i> continues. Public health generally good, though slight fever is prevalent.	
Kurigram	2.48		
Nilphamari	Nil		
14 Bogra, " 9, '87	3.04		
Nowkhilla	5.38		
15 Pubna, " 9, '87	3.64	Weather—comparatively cool with occasional showers. Sowing of <i>amun</i> still continues. Public health fair. A few cases of cow-pox reported from thana Sherpore.	
Serajgunge	1.23		
16 Darjeeling, " 9, '87	4.27		
17 Julpigore, " 9, "	1.71		
	6.18		
	6.58	Weather—rainy. Prospect of crops good. Public health good. Rivers rising.	
Weather—seasonable. State and prospects of crops fair.			
Weather—hot and close. A partial break in the rains during the week. Showers interspersed with sunshine. <i>Bhadol</i> has been injured by excessive rain, and the break comes too late to repair damage. Jute is also a poor crop. All cultivation has been retarded by excessive rain, but the present break is doing good. Cholera still lingers in places. Cattle-disease also prevalent.			
Weather—hot and mostly cloudy. Harvesting of jute has begun. Sowing of <i>aus</i> and <i>roachia</i> paddy is being pushed on rapidly. Paddy crops and <i>til</i> have suffered damage in parts of the district owing to sudden rise of water; otherwise prospects on the whole continue good. Public health good.			
Weather—seasonable. Prospects of crops good. Public health fair.			
Eastern Districts.			
Dacca Division.	18 Dacca, July 9, '87	0.71	Weather—hot and mostly cloudy. Harvesting of jute has begun. Sowing of <i>aus</i> and <i>roachia</i> paddy is being pushed on rapidly. Paddy crops and <i>til</i> have suffered damage in parts of the district owing to sudden rise of water; otherwise prospects on the whole continue good. Public health good.
	Manickgunge	0.44	
	Munshingunge	0.65	
	Naraingunge	1.27	
	Furzedore, " 9, '87	1.31	
	20 Goalundo	0.19	Weather—seasonable. Prospects of crops good. Public health fair.
	Madaripore	0.40	
	Backergunge, " 8, '87	1.36	
	21 Mymensingh, " 8, '87	3.03	
	Jamalpur	0.60	
Kishor-gunge	2.71	Rain general. River rising. Prospects of crops favourable.	
Attra	1.78		
Netrokona	2.76		

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
Eastern Districts—contd.			
CHITTAGONG DIV.	22 Chittagong, July 12, '87	4.91	Weather—seasonable. Transplanting of <i>aus</i> completed. Cultivation of <i>aman</i> going on. Prices unchanged. Sporadic cases of cholera reported.
	23 Noakhali „ 8, „	3.07	Weather—generally cloudy, but not yet sufficient rain. Prospects of crops fair.
	Fenny „ „	1.36	More rain wanted.
	24 Tipperah July 7, '87	2.55	Weather—somewhat dry for time of year. Crops are in excellent condition up to the present time, but rivers are rising in the north, and in the south more rain is wanted to prevent injury to the <i>aus</i> crop.
	Bulmuanbariah „ „	1.19	
	Chandpur „ „	0.20	
CHITTAGONG DIV.	25 Chittagong Hill Tracts, „ 5, '87	8.10	Weather—rain with occasional sunshine during the greater part of the week. <i>Joom</i> paddy and cotton doing well. Ploughing for late rice continues; seed-beds being sown. Fever prevalent.
	Hill Tipperah „ 7, „	3.30	Weather—rainy. <i>Amun</i> paddy being transplanted. Oilseeds and <i>satya</i> paddy being gathered. Sugarcane and <i>joom</i> crops promising. Public health good.
BEHAR.			
PATNA DIV.	26 Patna, July 9, '87	1.59	Weather—cloudy and close, with occasional showers. <i>Bhadai</i> and paddy seedlings growing well. Sugarcane promising. Public health generally good.
	27 Gaya „ 9 „	1.70	Weather—moist and cloudy. <i>Bhadai</i> and paddy being sown. Cholera, fever and small-pox still reported.
	28 Shahabad „ 9 „	1.32	Weather—seasonable. Prospects of <i>bhadai</i> crop favourable where irrigation is practicable. More rain is required. Cholera reported from the Buxar and Sassaram sub-divisions, and one suburb of Arrah town; otherwise public health good. Prices stationary.
	Sassaram „ „	Nil	
	Bhabunah „ „	0.72	
	29 Darbhanga „ 9 „	4.10	Weather—occasionally cloudy. Prospects of early rice favourable. <i>Bhadai</i> sowings in progress. Indigo manufacture going on. Prices remain stationary. Cholera abating.
	30 Mozuffernore „ 9, '87	1.52	Weather—cloudy and rainy. <i>Bire</i> , <i>marua</i> , <i>sema</i> and <i>kannai</i> being transplanted, and maize being weeded. A good deal of cholera and fever and some small-pox reported.
	Hajipur „ „	1.19	
	Sitamarhi „ „	2.05	
	31 Saran „ 9 „	3.74	Weather—cloudy with occasional sunshine. Prospects of crops continue good. Cholera reported from the interior.
PATNA DIV.	Sewan „ „	2.21	
	Gopalzunge „ „	5.01	
PATNA DIV.	32 Champaran „ 9 „	1.78	Weather—hot; often cloudy and rainy. Transplanting of paddy has begun on low lands. <i>Bhadai</i> crops coming up well. <i>Mahai</i> of indigo in progress. Choicest much diminished. Prices stationary.
BAGULPORE DIV.	33 Monghyr, July 9, '87	3.83	Weather—hot and close with occasional showers. <i>Bhadai</i> crops and paddy seedlings are thriving well, and prospects continue favourable. Cholera still lingers in places; otherwise general health good.
	Deoghar „ „	4.81	
	Janm „ „	3.86	
	34 Bagulpore „ 9 „	1.96	Weather—more seasonable. Brighter weather has benefited <i>bhadai</i> , but weeding still backward. Young rice damaged on low lands within reach of Kosi floods; otherwise <i>marua</i> and rice prospects good. Transplanting in progress.
	35 Purneah „ 9 „	2.24	Weather—fair with occasional heavy showers. Jute crop damaged and low land rice injured by excessive rain.
	Kishengunge „ „	5.01	
	Arrareah „ „	3.77	
	36 Muldah „ 9 „	3.98	Weather—changeable, sometimes with high winds. Floods have done considerable injury to <i>bhadai</i> and <i>aman</i> crops over greater part of thana Kharba. Winter paddy is being transplanted. Common rice 20 to 21 seers per rupee. Public health good.
	Chanchul „ „	3.12	
	Shibgunge „ „	1.76	
BAGULPORE DIV.	37 Southal Pergna „ 9 „	2.11	Weather—cloudy with occasional showers. Sowing of Indian-corn proceeding everywhere; in Deoghar the early sowings have suffered from insects. Lands are now being prepared for transplanting paddy. Indigo in Rajmehal is not doing well.
	Deoghar „ „	4.57	
	Pakour „ „	5.97	
	Rajmehal „ „	2.99	
	Golda „ „	7.56	
ORISSA.			
ORISSA DIV.	38 Cuttack „ „	Report not received.
	39 Pooree „ „	Report not received.
	40 Balasore July 8, „	1.98	Weather—hot and cloudy with occasional showers. All crops and agricultural operations are going on well. Cholera among pilgrims returning from Pooree; public health otherwise fair.

District and date of return.			Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPORE.				
<i>South-West Frontier Agency.</i>				
41	Hazaribagh,	July 8, '87	1.13	Weather—generally fair. More rain wanted in parts of the district. Sugar-cane doing well. Paddy is being transplanted. Cholera in places; otherwise public health good.
42	Lohardugga	„ 9 „	3.56	Weather—seasonable. Alternate sunshine and rain. Heavy rain wanted in Palamow. Prospects of crops appear to be good. Prices easy. Cholera still prevails; public health otherwise fair.
	Palamow	...	0.69	
43	Singbnoom	„ 8 „	1.56	Weather—cool. Light showers frequent. Prospects of crops good. Cholera reported from Seraikella and from Baharagorah outpost. Cattle-disease abating. Public health fair.
44	Nachnoom	„ 9 „	0.57	Weather—close and hot. More rain much wanted for the seedlings. Prospects of crops otherwise good. Public health good.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, DURING THE MONTH OF JUNE 1887.**

The month of June is, from a meteorological point of view, almost the most important month of the whole year in Bengal, for it is in this month that the south-west monsoon usually establishes itself over the province, and generally over the greater part of Northern India. It is also remarkable that the distribution of the rainfall in Bengal during June frequently foreshadows in a rough and general way the chief features of the distribution of the rains which may be expected during the south-west monsoon period. The cause of the setting in of the rains at the end of May or the beginning of June has been discussed in the monthly reports of previous years, and it is therefore not necessary to repeat this description. It has also been pointed out that the rainfall in the south-west monsoon is not due to a perfectly steady and continuous action, but that it occurs rather as a series of waves or pulsations, a strong wave of rainfall being followed by a period of comparative calm and absence of rainfall, and it is during the latter that frequently small barometric depressions or cyclonic storms are formed, generally over the sea area, and which, after developing for a few days, advance over the land, bringing heavy rainfall to the districts through which they pass. With reference to these storms, it may also be said that the longer the period during which they are forming the more intense they will be. So far also as has been ascertained up to the present time, it would appear that, during a comparatively weak monsoon, the periods of comparative cessation of rainfall are more frequent and are of longer duration than during a monsoon of normal strength, and thus weak monsoons are frequently characterized by the number and comparative intensity of the cyclonic storms or barometric depressions which visit the land, while during years when the monsoon is equal to or above its normal strength, these storms occur but seldom; and they are of little intensity.

The distribution of the normal rainfall in June is to a certain extent similar to that of April and May, but of course much heavier. The lines of equal rainfall run nearly north and south through the province, the heaviest falls occurring in east and parts of north Bengal, and the smallest in the western parts of Behar. In the former districts rainfall varies from 25 to 35 inches, while at Buxar it is less than 5 inches.

The most important meteorological features of June are, therefore, the date of the commencement of the south-west monsoon, its strength, the occurrence and paths of cyclonic storms and the amount and distribution of the rainfall.

Establishment of the monsoon.—Even in ordinary years it is almost impossible to state with any great precision the exact date on which the rains may have said to have broken over the province, and this year, owing to the formation of the small and very fierce cyclone which passed over Balasore on May 26th, and which brought up in its rear an inrush of monsoon winds, but which inrush died away shortly after, it is much more difficult than usual to assign any precise date for the breaking of the rains. It is true that in some districts rainfall was general and heavy from the time of the passage of the cyclone until the 1st or 2nd of June, but subsequent to this there was a very distinct break, which lasted from about the 5th up till the 12th or 13th of June, though in some parts of South Behar and Chutia Nagpur the rainfall did not again commence till the 14th. It therefore the advance of the cyclone with its attendant strong winds, drawing the rain-laden monsoon current after it, be looked upon as an accidental circumstance, for the cyclone might have travelled in any other direction, then it may be said that the ordinary south-west monsoon current began to blow over Bengal from about the 12th of June, and that it was thus a little later than usual. Even with this second advance of monsoon winds, however, another cyclonic storm was formed in front of it, but on this occasion the storm crossed the west coast of the Bay between Gopalpore and Vizagapatam.

Strength of the monsoon.—The monsoon current may vary in two ways, and its strength will depend on the two considerations of its velocity, and the depth or thickness of the current. No means are available for measuring the depth of the current, so that, in judging of the strength of the monsoon current from year to year, only its velocity can be measured and compared. The velocity can be measured accurately, but it will be seen that this alone can give only a rough approximation to truth. In the table below are given the actual daily velocity of the winds for June compared with the average for the same period at all the stations near the coast, from Diamond Island round to Gopalpore, at which winds have been registered for a sufficient length of time to give a reliable average:—

STATIONS.			Actual average wind velocity for June 1887. Miles per day.	Normal wind velocity in June. Miles per day.
Diamond Island	191	203.8
Akyab	102	54.2
Chittagong	141	168.1
Dacca	173	175.0
Jessore	103	119.5
Calcutta	174	146.5
Saugor Island	381	338.1
Cuttack	120	97.6
False Point	286	249.2
Gopalpore	349	278.6

From this table it will be seen that at the stations from Gopalpore up to Calcutta wind velocities have been above the normal, but that at Jessore, Dacca and Chittagong winds have been below the normal in strength. These facts would naturally point to the inference that rainfall in East Bengal should be below the normal in the month under review, and this it will be subsequently seen is borne out by the actual results. On the other hand, the excess in the wind velocities at the western stations at the head of the Bay would point to the probability of increased rainfall at the western stations, but this inference is not supported by the facts, and generally speaking the rainfall at the western stations has been largely below the normal. This being the case, it would seem probable that, while the monsoon current blowing over Bengal was of greater velocity than usual over a considerable area, yet that it must have been considerably deficient in depth, thickness or volume, and that therefore the strength of the monsoon, which is the combination of velocity with volume has been in June decidedly lower than usual.

• *Meteorology of the month.*—As has been previously mentioned, the month of June opened with fairly general rainfall during the first day or two, the rainfall being due to the advance of monsoon winds which had followed after the Balasore cyclone. A period of comparative absence of rain then followed, during which another advance of monsoon winds was taking place in the Bay, in front of which, on about the 10th, a cyclonic storm commenced to form. The description of the formation of this storm will be found under the head of Barometric depression of the month. The storm having advanced inland on the morning of the 13th, the monsoon current which had been previously deflected away from Bengal by the storm, then commenced to pass over Bengal, and most districts reported rainfall from the 13th, though the rain did not reach Behar until the 14th and 15th. The winds blowing over Bengal became almost normal in direction after the storm had advanced inland, and a strong southerly and south-easterly current was reported up till the 16th. On this day, however, a strong westerly element appeared in the wind directions over the province, and at most of the western and southern stations winds were south-westerly. This setting in of westerly winds was apparently due to the extension of the influence of the Bombay branch of the monsoon current, which at this time was blowing very strongly. The westerly current still continued strongly pronounced on the 17th. These westerly winds, in driving back the easterly, south-easterly, and southerly monsoon winds which had previously been blowing from the Bay of Bengal, caused a considerable amount of interaction or interference, and therefore probably of ascensional motion, and consequently conditions became favourable for heavy rainfall, particularly in the north and east of the province, and at this time rainfall was extremely heavy at many of the stations in these districts.

The westerly current then commenced to decrease in force, and on the 19th a feeble whirl was formed close to the Sunderbuns. This also will be described under the barometric depressions of the month. This feeble storm broke up in South Behar about the 22nd, and the heavy rains which were accompanying it to a great extent ceased. At this time atmospheric pressure became largely above the normal, the monsoon winds fell off in strength, and a slight but distinct break in the rains ensued. This lasted till about the 26th or 27th, when pressure began to fall, and conditions became rather more favourable for rainfall; but quite up till the close of the month a very feeble monsoon only was blowing over the province, and rainfall became decidedly local and generally light in all districts except East and North Bengal and North Behar. As also is usually the case when a light monsoon is blowing, the rainfall during this period was particularly irregular in its distribution, and while some stations and districts received abundant rain, neighbouring stations, in which the meteorological conditions were apparently precisely similar, received little or no rain.

Barometric depressions of the month.—These were two in number, the first being large and somewhat intense, and the second merely a feeble whirl which only brought up heavy rain to the districts through which it passed.

Cyclonic storm of June 10th to the 14th.—Indications of unsettled weather first appeared off the Pegu coast on June 8th, but on the 9th they did not appear to have developed to any great extent. On the 10th a rather feeble cyclonic storm had clearly formed in the northern half of the Bay, which was accompanied by a very well marked cyclonic circulation of winds, and the centre of the storm was probably to the west of the centre of the Bay, and apparently opposite the coast between Gopalpur and Vizagapatam. On the 11th there was a decidedly rapid fall of pressure at the west coast stations of the Bay in the neighbourhood of the storm, at the same time wind velocities at Diamond Island and in the north of the Bay increased very decidedly, showing that the storm was gradually and rather considerably intensifying. Similar conditions prevailed on Sunday: pressure fell again at the coast stations and became very low, and wind velocities increased in the rear of the storm, and at Diamond Island blew very strongly, and it is probable that on this day the storm was of considerable strength, and weather over the northern part of the Bay was very squally, if not stormy. The storm was also drifting slowly in a westerly direction. It was thought desirable on this day to warn the ships proceeding down the River Hoogly of the existence of the storm, and on the afternoon signal No. 5 was hoisted, which signified the existence of a small cyclonic storm in the Bay, the centre of which would probably cross the coast to the south of False Point. On the 13th, at 10 A. M., the centre of the storm was almost over the coast about midway between Gopalpur and Vizagapatam. During the night of the 13th pressure at Gopalpur was about 29.3", showing that the storm was one of moderate intensity; but it must also be remembered that the centre of the storm was at least 80 miles from the nearest meteorological station, so that probably at its centre pressure was far lower

than that recorded. As the storm was passing inland, the storm signals were lowered on the afternoon of the 14th. Fairly strong winds were recorded in connection with the storm, but, as stated above, the meteorological stations were too far away to give any good record of the actual intensity of the storm. The storm afterwards drifted into the Central Provinces and subsequently filled up. Reports received from ships navigating the Bay at this time show that the storm gave rise to very strong winds and high sea, and generally to very bad weather in the centre of the Bay.

Feeble whirl of June 19th to the 22nd.—On the 19th, the 10 A. M. observations showed clearly that a very feeble whirl or barometric depression had formed over the Sunderbuns, the centre of the whirl being apparently only a short distance to the south-east of Saugor Island. On this day the wind direction at the stations at the head of the Bay showed a distinct cyclonic circulation in connection with the feeble whirl, but the wind velocities were in all cases light. On this day rainfall was fairly general in South-West Bengal and Orissa, and in some cases decidedly heavy in connection with the small depression, but the indraught towards it to a certain extent stopped the progress of the monsoon current over Bengal, and rainfall was to a great extent absent in East and North Bengal and in Behar. On the 20th, at 10 A. M., the very feeble storm had moved in a north-westerly direction, and its centre was between Burdwan, Ranigunge and Bancoorah, and apparently approaching Ranigunge, and round the storm wind direction showed a very complete cyclonic circulation. It had also intensified slightly on this day, and the depression was very distinctly perceptible, though the wind force in connection with it was small. The feeble storm, however, brought up a rather heavy burst of rainfall to the area affected by it, and by allowing the monsoon current to again advance over the land, rainfall extended to other parts of Bengal also, and on this day heavy rain was reported over a large part of the province. On the 21st the storm had again advanced in a north-westerly direction, and its centre was in South Behar. It was on this day probably becoming more feeble, and it was then a decidedly shallow depression, the centre of which was between Gya and Bhagulpore. On this day rainfall became lighter in South-West Bengal, Orissa, and to a certain extent in East Bengal, but the area of heavy rainfall extended to the northern districts of the province, and heavy rain fell in Behar and North Bengal. The feeble storm then commenced to break up, and its disappearance again produced heavy rain over the whole of the northern districts of the province, and on the 22nd the storm had scarcely any well-defined existence at all.

Pressure—Was at the commencement of the month slightly below the normal, but after about the 6th a slow increase of pressure commenced till about the 10th, when the pressure changes were governed by the existence of the cyclonic storm in the Bay. After the disappearance of the storm pressure rose steadily, and on about the 24th of June it became very largely above the normal over the whole of Bengal, the average excess being greater than a tenth of an inch, though the excess at the Assam stations was only about half this amount. Pressure subsequently commenced to fall, but even up to the close of the month it had not become normal, and pressure was generally in excess by small amounts averaging about 0.03 inch or 0.04 inch. For the whole month the variations from the normal have not been very large, and taking those stations in Bengal only, from which records have been obtained for a number of years, and whose averages can therefore be depended on, the variation of the mean pressure of the whole province for June has only been an excess of 0.015 inch. This excess has been very equally divided, for the largest variations are from an excess of 0.008 inch at False Point and Burdwan to one of 0.027 inch at Hazaribagh. In Assam also pressure has been very nearly normal for the month, Sibsagar showing an excess of 0.007 inch, Dhubri one of 0.006 inch, while Silchar shows an average defect of 0.004 inch.

Temperature—Was at the commencement of the month decidedly low over the province, as heavy rain had fallen in connection with the cyclone which passed over Balasore at the end of May. During the remainder of the month there have been somewhat large oscillations owing to there having been periods of heavy rain and of absence of rain, but for the whole month the variations for the normal are not very large, and for the stations in Bengal the variation is a defect of 0.9°. The variation is, however, a little unequal in different districts, Behar showing a defect of 2.5° and Chutia Nagpur one of 1.6°, while East and North Bengal show temperatures slightly in excess of the normal. In Assam the mean temperature for the month has been 1.5° in defect of the normal.

Rainfall—The rainfall statistics of Assam are only received from three stations, and the amounts recorded during June have been as follows:—Silchar the large amount of 26.41 inches, Dhubri 25.66 inches, and Sibsagar 15.47 inches.

The rainfall data for Bengal, on the other hand, are very complete and can therefore be discussed in detail. Generally speaking the rainfall in June for Bengal has been largely in excess of the normal in North Bengal and North Behar, and rather largely in defect over the remainder of the province. Compared with the normal for the period, the fall of the whole province of Bengal in June may be said to have been equal to 92 per cent. of the normal fall, but in different districts the falls are very unequal; the fall has been 39 per cent. in excess in North Bengal, 35 per cent. in excess in North Behar, 18 per cent. in defect in South-West Bengal, 21 per cent. in defect in East Bengal, 27 per cent. in defect in Chutia Nagpur, 30 per cent. in defect in South Behar, and 34 per cent. in defect in Orissa. The figures representing the rainfall of the month of June in

each meteorological division, calculated as a percentage of the normal, are included in the table below. This table really gives a condensed summary of the rainfall statistics of the present year up to the end of June for each meteorological division, the first six columns giving the actual monthly falls of the six months expressed as a percentage of the normal, while the seventh column shows the total fall for the six months expressed in the same way. In the table therefore 100 will represent a normal fall, a number above 100 as an excess fall, and so on :—

Meteorological districts	February.	March.	April.	May.	June.	Actual rainfall of first six months expressed as a percentage of the normal fall for the period.
Orissa	119.	Nil.	137	60	193	66
South-West Bengal	232	273	56	139	82	165
East Bengal	413	206	34	71	79	
North Bengal	530	274	114	168	139	149
North Behar	Nil.	127	109	177	135	147
South Behar	Nil.	263	188	423	70	160
Chittia Nagpur	Nil.	10	111	331	73	117

Taking up the rainfall more in detail, it is found that instead of the lines of equal rainfall running nearly north and south as they do in normal years in June, in the present instance they run from south-east to north-west. The centres of heaviest rainfall have been in the north-east of the province, at such stations as Cooch Behar, which has received 54.25 inches, Aitpore Duar in the Julpigoree district, which has received 47.88 inches, and Bagdogra (Rungpore district), Falacotta (Julpigoree district), and Matabhanga (Cooch Behar district) which have each received more than 40 inches. From these, as the centres of heaviest fall, the rainfall diminishes towards the west and south of the province, till many stations in these districts have received falls below 5 inches, and in some cases below 3 inches. Roughly speaking, a line drawn from Patuakhally in South-East Bengal in a north-westerly direction to near Bettiah in North Behar, divides the province by a line of 10-inch rainfall, the districts to the north having received amounts above, and those to the south below this amount. As examples of extremely small falls during the month, it may be mentioned that Pooree has only received 1.81 inches, False Point 2.19 inches, Barasat 3.71 inches, Burdwan 2.95 inches, Onda 3.10 inches, Jessore 2.65 inches, Aurangabad 2.58 inches, Rajauli (Gya district) 1.10 inches and Barhi (Hazaribagh district) 1.49 inches.

Compared with the normal fall, almost the whole of the north-eastern districts have received excess falls, the excess amounts in some instances being larger than 10 and 15 inches, while the whole of the remainder of the province has been in defect, generally by amounts ranging up to 4 inches, but which also in certain areas exceed 10 and 15 inches. The line of normal rainfall starts in the east of the province at about Brahmunberiah, passes through Dacca district, then through the Pubna and Rajshahye districts, then takes a dip to the south and skirts the Moorshedabad district, then passes to the north of the Sonthal Pergunnahs district, and from this point nearly follows along the line of the Ganges. To the north of this line the rainfall has been in excess and to the south in defect. The areas of largest defect comprise the southern and south-eastern parts of South-East Bengal, a portion of Central Behar, comprising parts of the Burdwan, Hooghly, Howrah, 24 Pergunnahs, Nuddea and Pubna districts, and also considerable parts of the Balasore, Pooree and Cuttack districts, though other parts of the Cuttack district are in considerable excess.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of June in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance for weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the

normal rainfall, and is hence the difference between the numbers in the third column and 100 :—

DIVISION.	DISTRICT.	Normal district rainfall, June 1887.	Actual district rainfall, June 1887.	Percentage of actual to normal rainfall.	Percentage excess (+) or deficit (—)
Orissa	Pooree ...	8.18	2.85	35	—65
	Cuttack ...	9.42	9.99	106	+ 6
	Balasore ...	8.75	5.11	58	—42
South-West Bengal	Midnapore ...	9.90	6.92	70	—30
	24-Pergunnahs ...	10.07	7.09	74	—26

The mean pressure of the seven days

The average pressure of the corresponding period for 24 years, S. G.'s Office

The total number of hours of bright sunshine

The maximum possible number of hours of sunshine

The mean temperature of the seven days

The average temperature of the corresponding period for 24 years, S. G.'s Office

The extreme variation of temperature

The maximum temperature

The highest velocity of the wind in one hour

The highest pressure of wind on one square foot

The mean relative humidity

The average relative humidity of the corresponding period for 24 years, S. G.'s Office

The total fall of rain from 3rd to 9th July 1887

The average fall of the corresponding period for 24 years, S. G.'s Office

The total fall from 1st January to 9th July 1887

The average fall of the corresponding period for 24 years, S. G.'s Office

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The month of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew.

A. PEDLER,

For Offg. Meteorological Reporter to the Govt. of India.

years. The variations are negative when the mean for the week is less than the corresponding normal mean, and positive when greater. denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall, the normal mean denotes the total rainfall at the station during the period.

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 8th of July 1897.

..... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are not received, the corresponding space in the total rainfall column is left blank.

1A, the 12th July 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
8th OF JULY 1887.**

DURING the previous week the monsoon current blowing over the province had been decidedly light, and in consequence the average rainfall had been much below the normal in the Bay, however, the monsoon current which had been blowing was fairly strong. The same conditions have obtained during the greater part of the present week, and the monsoon current appears to have been partially stopped by the generation of a feeble whirl in the northern half of the Bay, and which only reached the land on the 7th. The whirl was formed very slowly and never intensified to any extent, and yet it apparently affected the monsoon current blowing over Bengal and made it decidedly weaker. The principal feature in the meteorology of the week has therefore been the formation and advance of this whirl. On Saturday, the 2nd instant, pressure became comparatively low off the Arakan coast, and winds showed a slight tendency to circulation along this coast. On the following day these indications of the formation of a feeble barometric depression or whirl were confirmed, and it was probably on this day near the centre of the Bay and south of a line joining Akyab and Gopalpore. On Monday, the 4th, the whirl had developed to a sufficient extent to cause a distinct cyclonic circulation of winds over the whole of the northern half of the Bay, and on this day probably the centre of the whirl or feeble depression was to the west of the centre of the Bay, and to the east-south-east of Gopalpore. On Tuesday, the 5th, it had distinctly developed and had advanced in a north-westerly direction, the centre being to the south of Saugor Island and about east-north-east of False Point. Notwithstanding that it had distinctly developed, it was still exceedingly feeble, and the wind velocities in connection with it were very small, though the circulation was completely cyclonic. On the 6th it had again advanced, and on this day apparently the centre was close to Saugor Island, but it was clear that it was not developing to any extent, but that it was rather becoming more feeble. On Thursday, the 7th, it had passed inland, but it had weakened to such an extent that it had almost disappeared, and on the 8th it had quite filled up. For the whole period of its existence the winds accompanying it, as judged by the coast stations, were comparatively weak, but at sea it probably gave rise to strong winds and squally weather. In its advance it brought rather heavy rain, and on the 6th Balasore, Jelasore, Contai, Saugor Island, Devog, and other stations each reported about 2 inches of rain.

Though the depression was such a feeble one, yet it to a certain extent, by the indraught towards it, stopped the monsoon current from spreading over Bengal, and thus rainfall has been in defect in nearly all districts, the defects being particularly noticeable in East and North Bengal, in North Behar and in Chutia Nagpur: that is, in those districts which did not feel the effects of the rainfall which accompanied the storm. With the advance of the storm inland, and its disappearance, conditions have now become decidedly more favourable, and the strong monsoon current which has been blowing in the Bay should be able to advance uninterruptedly over Bengal and to give good rainfall.

Pressure.—The depression above described was of so feeble a nature that it had not any considerable effect on the general pressure of the province, excepting to make the average pressure of the south-western stations for the week comparatively low. Over the greater part of the province the mean pressure for the week has been slightly above the normal, the excess ranging about as high as 0.05" at Purneah. The general excess pressure at all the stations except those affected by the depression has not been larger than about 0.03", and when all the stations in the province are considered from which records have been received for several years, and which therefore give reliable averages, the mean weekly variation is only an excess of 0.019". At False Point, on the other hand, pressure has been in defect by 0.012", and at Gopalpore the defect has been 0.018". In Assam pressure has been in excess by 0.015", the seat of principal excess being Sibsagar.

Temperature.—The variations of temperature during the week have not been large, and the mean temperatures have been nearly normal. For the whole province the average variation for this period is less than a tenth of a degree, so that it may be said the general temperature has been normal. In the various districts East Bengal shows a slight excess temperature and Chutia Nagpur a slight defect. In Assam temperature has been quite normal on the average for the week.

Rainfall.—As has been previously stated, has been decidedly below the normal in almost all districts. Compared with the normal, and expressed as a percentage of the normal fall, the rainfall in each meteorological district becomes—Orissa 101 per cent., South-West Bengal 96 per cent., East Bengal 76 per cent., North Bengal 80 per cent., North Behar 69 per cent., South Behar 80 per cent. and Chutia Nagpur 64 per cent. Taking all these as having an equal value in the calculation, the rainfall in the province may be said to have equalled 81 per cent. of the normal for the period.

As is usually the case, when a light monsoon is blowing, the distribution of the rainfall has been decidedly irregular. Thus in the following districts the rainfall has been very considerably smaller than would be indicated by the above numbers:—Midnapore, Hooghly, Khoolna, Jessore, Furreedpore, Dacca, Rungpore, Mozufferpore and Bhagulpore. Centres of comparatively heavy rainfall, on the other hand, have occurred in the following districts:—Beerbhoom, Berhampore, Chumparun and Gya.

MEMORANDUM.

THE table appended to this memorandum furnishes the following particulars in connection with the mortuary statistics of the districts in Bengal for the month of December 1886:—

1. That 187,707 deaths occurred among a population of 66,163,884, representing an annual death-rate of 33.96 per 1,000, against 32.04 per 1,000 in the preceding month, and 27 per 1,000 in the corresponding month of the preceding year, indicating, as compared with both the periods, (especially with the latter), a considerable improvement in the registration of the events.

2. That the undermentioned districts furnished the highest proportions of deaths:—

Districts.			Districts.		
		Ratio per mille.			Ratio per mille.
Rungpore	...	61.56	Pubna	...	41.52
Backergunge	...	58.20	Dinajpur	...	40.14
Nuddea	...	53.52	Hughli	...	39.48
Dacca	...	53.28	Murshidabad	...	39.49
Jalpaiguri	...	49.80	Jessore	...	38.88
Shahabad	...	49.56	Bhagulpore	...	38.00
24-Pergunnahs	...	49.08	Midnapore	...	34.20
Rajshahye	...	48.00	Howrah	...	34.04
Puri	...	47.88	Purneah	...	33.60
Balasore	...	47.16	Monghyr	...	32.52
Khulna	...	46.46	Burdwan	...	32.40
Bogra	...	46.20	Maldah	...	32.40
Birbhum	...	42.36	Noakhali	...	29.76
Serampore	...	42.12	Chumparun	...	29.64

3. That the principal diseases proved fatal at the following rates:—

			Ratio per mille during—	
			December 1886.	December 1885.
Cholera	4.32	2.16
Small pox02	.03
Fever	24.12	20.04
Bowel-complaints	1.08	.96
Injury12	.12
Other causes	4.08	3.36

indicating chiefly in comparison with the mortality of the corresponding month of the preceding year, a considerable increase of mortality from cholera and fever, particularly from the latter.

4. That the following districts returned the highest death-rates per 1,000 of their populations from the abovementioned diseases, excepting small-pox, bowel-complaints and injury, which do not appear to have presented any local exacerbations:—

Cholera.			Fever.			Other causes.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Dacca	...	20.52	Rajshahye	...	45.00	Puri	...	23.52

MEMORANDUM.

DURING the week ending 25th June 1887 the returns from the principal Municipalities in Bengal furnished the following particulars :—

1. That births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 13·3 and 20·2, respectively, as opposed to 17·3 and 18 per 1,000 in the preceding week ending 18th June, indicating a sensible improvement in the registration of deaths with a large retrogression in that of births.

2. That the highest proportions of births were returned by the Comillah and Arrah Municipalities, viz., at the rates of 38·5 and 38·3 per 1,000 of their populations, respectively, and of deaths by the Puri, Bhagulpore and Gya Municipalities, viz., at 12·8, 34·4 and 32·8 per 1,000 respectively.

3. That as compared with the results of the preceding week, there was a noticeable increase of mortality from cholera, and only fractional variations in the death-rates from the rest of the diseases; *vide* figures given below :—

					Ratio per <i>mille</i> during the weeks ending—	
					25th June 1887.	18th June 1887.
Cholera	3·5	2·4
Small-pox	·1	·2
Fever	7·5	7·0
Bowel-complaints	2·3	2·2
Injury	·4	·3
Other causes	6·4	5·9

4. That the Municipalities named below appear to have suffered the most from the diseases (excepting small-pox and injury, which exhibited no local severity) indicated in the foregoing table :—

Cholera.		Fever.		Bowel-Complaints.		Other causes.	
	Ratio per <i>mille</i> .		Ratio per <i>mille</i> .		Ratio per <i>mille</i> .		Ratio per <i>mille</i> .
Puri	... 77·6	Puri	... 29·4	Puri	... 12·6	Gya	... 16·4
Patna	... 5·5	Purneah	... 20·8			Bhagulpore	11·8
Dhurbhanga	... 5·5						
Bhagulpore	... 4·5						
Gya	... 2·7						
Suburbs of Calcutta	2·3						

It will be noticed that cholera prevailed with very great severity in the Puri town, its prevalence being, no doubt, associated with the presence of pilgrims in that town for the *Rath Jatra* festival which took place this month.

5. That the death-rates in relation to *Sex*, *Class* and *Age*, stood as noted below :—

According to Sex.		According to Class.		According to Age.	
	Ratio per <i>mille</i> .		Ratio per <i>mille</i> .		Ratio per <i>mille</i> .
Males	... 20·3	Christians	... 13·0	Under 1 year	... 162·9
Females	... 20·2	Hindus	... 22·6	1 and under 5 years	... 30·4
Ratio of male deaths to every 100 female deaths	113	Mahomedans	... 15·3	5 " " 10 " "	... 52·4
				10 " " 15 " "	... 8·6
				15 " " 20 " "	... 7·8
				20 " " 30 " "	... 12·1
				30 " " 40 " "	... 13·4
				40 " " 50 " "	... 15·6
				50 " " 60 " "	... 27·9
				60 years and upwards	... 41·6

R. LIDDERDALE, M.D., *Deputy Surgeon-General*,
Sanitary Commissioner for Bengal.

The 11th July 1887.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during 5 weeks ended 28th May 1887.

INCREASES.

Coal and coke.—The increase was both in the despatches for upward and downward coal, the former was due to despatches from Karmatar for the North-West Railway, and from Sitarampur to Cawnpore, Delhi and stations on the Tirhoot State Railway, and the latter was chiefly due to despatches to the Eastern Bengal State Railway carried over the Jubilee Bridge *via* Naihati.

Cotton.—This increase was due to large stocks at despatching stations.

Wheat.—Due to good demand in Calcutta.

Rice (husked and unhusked).—The increase was principally in the despatches from Raneegunge and stations on the Loop line to stations in the Dinapore district, Allahabad, Jubbulpore, and Cawnpore, owing to low rates at the sending stations and to comparatively high prices prevailing in Behar and the North-West Provinces.

Opium.—Due to increased despatches to meet Government requirements.

Railway Material, Foreign.—The increase was in the despatches from Howrah to Chowra for the Indain-Midland Railway, and from Bombay to Manikpur for the same system.

Salt.—There was a large increase in the despatches from Howrah due to the fall in the price of imported salt.

DECREASES.

Piece-goods, European.—Due to the markets at Calcutta and in the North-West Provinces being very dull, and to fewer marriage ceremonies having taken place during the period.

Turmeric.—This decrease was principally in the despatches from Howrah, and may be ascribed in some measure to the competition of the inland steamers, and to stations in the North-West obtaining some of their supplies from Madras.

Gunny.—This decrease was principally in long distance traffic, and may be ascribed to the absence of any large demand in the Punjab and Oudh and the North-West Provinces, owing to the partial failure of the crops.

Pulses.—The decrease was general, and may be ascribed, in the case of the stations in the Dinapore district, in some measure to the cultivation of wheat having taken the place of pulses. In the North-West and Punjab the crop of pulses appears to have suffered in the same way as other crops.

Other rain and spring crops.—The same remarks apply as in regard to pulses.

Hides.—This decrease is said to be due to abundant pasture in the Dinapore district, resulting in less cattle mortality than usual during the dry season.

Seeds.—The decrease was chiefly in the despatches of linseed from stations Luckeeserai to Cawnpore. It is believed that the stock of linseed at stations in the Dinapore district is very large, and that merchants are holding back their despatches for a rise in prices in Calcutta.

Sugar, refined and unrefined.—The remarks made in the report for April 1887 may be repeated; there is still a deficiency of sugar at the exporting stations in the Dinapore district, and the Oudh and Rohilkund Railway is supplying Rajputana by way of Aligarh.

Government stores.—The decrease was principally in the despatches from Howrah.

Tobacco.—Due to poor crops and short land traffic from the Assam-Bihar State Railway *via* Shahbongunge Ghât.

N. ST L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 9th July 1887.

RESOLUTION ON THE REPORT ON INLAND EMIGRATION FOR THE YEAR 1886.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Calcutta, the 18th July 1887.

RESOLUTION.

READ—

The Report on Inland Emigration for the year 1886.

The report is submitted by Dr. Grant, who continued to hold the office of Superintendent of Inland Emigration during the year. The appointment of Medical Inspector of Emigrants was held by Dr. McConnell for the first six months, and by Dr. Chandra for the last six months of the year. Dr. Richards superintended emigration arrangements at Goalundo till the end of June 1886, when he was deputed to another station, and during the rest of the year the work of superintendence and medical inspection of emigrants at Goalundo was performed by the Sub-divisional Officer, Mr. Müller, and by Dr. Bose.

2. Arrangements were made during the year for the medical inspection of emigrants at Mugra, Jaipur Hât, Dhubri, Goalundo and Naraingunge, with a view to the removal and

Administrative measures.
treatment of those who might be found to be suffering from cholera or

similar diseases. Instructions were issued to prevent these necessary examinations being made the occasion of undue detention. A revised scale of establishment was sanctioned for the office of the Embarkation Agent at Goalundo, whereby an annual saving of Rs. 240 has been effected. It has been arranged, since the close of the year, on a proposal made by the Chief Commissioner of Assam, that Station-Masters on the Eastern Bengal State Railway and Northern Bengal State Railway shall telegraph to the Embarkation Agent at Dhubri reports of cases of cholera occurring among passengers travelling by rail to that station.

3. A daily steamer service between Naraingunge, Cachar, and Sylhet was introduced on the 1st January 1887, and it is confidently hoped that employers will avail themselves freely of the facility which has been in this way afforded to emigration, and thus put an end to the excessive mortality from cholera, so prevalent among coolies in the long and tedious boat journeys up-stream.

4. In the Resolution upon last year's report, it was noticed that there existed a tendency towards the substitution of free emigration to the labour districts for recruitment under Act, I of 1882. This conclusion has been amply confirmed by the experience of the year 1886, in which only 13,069 labourers and their dependents were registered under the Act, as against 16,404 in 1885, and 31,157 in 1884. Three contractors worked throughout the year, against five in 1885 and six in 1884: 106 recruiters were employed, as against 147 in 1885 and 211 in 1884, and the recruiters registered on an average 27 emigrants, as against an average of 30 in 1885 and 33.55 in 1884. On the other hand, it appears that the number of free emigrants to Assam increased from 9,320 to 13,134: the number of free emigrants to Cachar and Sylhet is not known.

5. In recruiting under the Act, the tendency is to substitute the agency of garden sardars for that of contractors. The contractors, who formerly had in their hands by far the greater part of the business, engaged during the year 1886 only 2,945 coolies; the garden sardars as many as 10,124. The contractors work chiefly for the gardens of Sylhet and Cachar.

6. The Lieutenant-Governor notices with pleasure that it was not found necessary to cancel the license of any recruiter during the year. Of the garden sardars one was deprived of his license for misconduct, which consisted in engaging a married woman without the consent of her husband. Some licensed female recruiters were employed during the year, but apparently without much success.

7. The statement showing the districts from which emigrants come has, like some of the other tables attached to the report, lost most of its original value, inasmuch as it relates only to coolies recruited through contractors, who now form but a small fraction of the whole body. Some information as to the numbers recruited by garden sardars is given in the body of the report, but it is very incomplete. On the whole, however, it is clear that Hazaribagh, the Sonthal Pergunnahs, Monghyr, Bankura, Gya, and Midnapore are the chief recruiting grounds.

8. Dr. Grant is able to give complete particulars only as to the transport of emigrants registered by contractors, as the others travel independently. As in the preceding year, all the emigrants registered by contractors were brought in the first place to Calcutta, none going to Goalundo direct. Of the 2,945 persons registered during the year, 2,885 arrived in the Calcutta depôts, nine were discharged and 51 deserted. After the addition of 221 persons remaining from the previous year, and of two infants born in the depôts, the number lodged in the Calcutta depôts in 1886 was 3,108. Of these 2,422 departed for Goalundo, and 16 travelled by rail to Dhubri. The remainder were disposed of as follows:—Fifteen were rejected, 204 discharged, 265 deserted, 7 died, 138 remained in the depôts at the close of the year, and 41 were not accounted for by a contractor who closed his depôt. Of these last persons, Dr. Grant writes:—"It is probable that the coolies were allowed to leave the depôt to be engaged elsewhere, in order to avoid the payment to them of compensation, which would have been awarded them had they been discharged in the usual way with the knowledge and consent of the Superintendent of

Emigration." This irregularity should be borne in mind in the event of the contractor seeking a renewal of his license.

9. The following table compares the details of the diminution in number of the emigrants during their stay at the depôts with the corresponding particulars for 1885 :—

	YEAR.			
	1885.		1886.	
Daily average strength	29.07		18.34	
Daily sick	1.17		0.66	
	Number.	Percentage.	Number.	Percentage.
Rejections, including relatives ..	58	1.30	22	0.70
Ditto, excluding relatives ...	32	0.72	15	0.48
Discharges	386	8.68	204	6.56
Desertions	274	6.16	265	8.52
Deaths from cholera	5	0.11	1	0.03
Total deaths from other causes ...	9	0.20	6	0.19

10. The figures for 1886 compare favourably with those for the preceding year under every head except "Desertions," as to which the Superintendent observes:—

"As regards desertions, since coolies who abscond carry their reasons with them, it is of course impossible, except in the few instances where deserters return to depôt after having failed in obtaining employment elsewhere, to ascertain the causes of desertion; but especially in view of the small demand for contractors' coolies during the past year, it is not unlikely that most of the desertions were due to the desire for immediate employment, and consequent disinclination to wait in depôt for the chance of being selected by employers. All coolies who had completed their month's residence in depôt, and expressed a desire to leave, as they had not been found work, were, after payment to them of compensation, returned in the usual manner, at the expense of the contractor, to the place of registration."

11. The Lieutenant-Governor agrees with the Sanitary Commissioner in considering that the improved statistics of sickness and mortality show that the sanitary arrangements of the depôts are now better, and that the supervision is more close. Every person admitted into the depôts was vaccinated. With regard to rejections, Dr. Chandra points out in his report that, although the number is small, it might be still further reduced if greater strictness were observed in the medical inspection of emigrants before they are despatched from the recruiting districts. This observation is supported by the figures given on page 10 of Dr. Grant's report, which show that four emigrants after they had been accepted in the interior as fit were rejected in Calcutta for idiocy and one for double cataract. The attention of medical officers will be drawn to this subject.

12. In tracing the history of the contractors' coolies after their departure from Calcutta, it is satisfactory to find that there were no casualties on the journey to Goalundo, and only one death, that of a newly born infant, in the depôts at that station, which are said to have been exceptionally healthy. The number accommodated in these depôts was 2,433, of whom 847 were despatched to the Assam Valley, 1,219 to Cachar and 361 to Sylhet. Among the Assam emigrants three deaths (two from cholera) occurred during the steamer voyage to the tea districts, and on the boat journeys to Cachar and Sylhet 13 emigrants deserted and 18 died (14 from cholera).

13. Particulars of the journey of sardari emigrants are incomplete, since the way-bills were not always returned to the Superintendent, as they should have been. But from the information furnished, it is evident that the mortality among coolies of this class during their journey by boat to Sylhet and Cachar was, as in previous years, very great. Out of 4,624 persons accounted for in the way-bills, as many as 216 died from cholera, and 33 from other causes, the percentage of deaths being 5.38. Some information should have been given as to the stage of

the journey in which the mortality occurred, and it is requested that this may now be furnished in a supplementary report. The excessive mortality among the coolies taken by sardars in boats to Cachar and Sylhet has long been the great drawback to the system of emigration, and it is hoped that a change will be effected now that the India General Steam Navigation Company have established a line of steamers, by the aid of which a great part of the voyage can be accomplished without delay or risk. The table given on page 16 of Dr. Grant's report also shows that 42 of these emigrants deserted, and that 22 were left behind *en route*. These particulars have been ascertained in consequence of the return of a larger number of way-bills than in former years, and the Lieutenant-Governor desires that Dr. Grant will continue his efforts to effect a further improvement in this respect.

14. Of the engagements entered into by contractors' labourers, not quite 10 per cent. were for a term of five years, and the remainder were for three years. Of labourers recruited by garden sardars and placed on contract in the recruiting districts, nearly 43 per cent. were made for five years. On this subject Dr. Grant writes:—

"It seems reasonable to conclude that coolies, under the influence of garden sardars, in whom they would be likely to have more confidence than in contractors' recruiters, would show less reluctance to engaging for five years than contractors' coolies, and the result may, I think, be in great part attributed to that cause."

It is to be observed that of 8,682 contracts made before the Embarkation Agent at Dhubri during the year, only 348 or 4 per cent. were made for three years, and all the remainder for five years. It would thus appear that coolies generally contract for the shorter period when the engagement is made in their own district, for the longer term when it is concluded at the end of the journey from Bengal.

15. The Lieutenant-Governor tenders his thanks to Dr. Grant for his efficient supervision of inland emigration during the year.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

ANNUAL REPORT ON THE POLICE ADMINISTRATION OF THE
TOWN OF CALCUTTA AND ITS SUBURBS FOR THE
YEAR 1886.

RESOLUTION.
POLICE.

Calcutta, the 16th July 1887.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1886.

Read also—

The Annual Reports of the Chief Presidency Magistrate, and the Presidency Magistrate of the Northern Division, on the Criminal Administration of their Courts for the year 1886.

The Reports for the year 1885 and the orders of Government thereon.

The following comparative table shows the total number of cognizable and non-cognizable cases reported in the Town and Suburbs of Calcutta during the year 1886 and two preceding years:—

			1884.	1885.	1886.
Cognizable	{ Penal Code	...	4,638	4,132	5,049
	{ Miscellaneous	...	16,010	13,948	19,336
Non-cognizable	{ Penal Code	...	12,248	9,692	8,538
	{ Miscellaneous	...	18,692	19,999	21,017
Total			51,588	47,771	53,940

An increase of over 6,000 cases is at first sight a very formidable increase; but an examination of the figures in the appended returns for the two years shows that there has not been any real increase of crime. For instance, in the town, cases of grievous hurt have increased from 21 to 37, and house-breakings from 130 to 170, but, as a counterpoise, there were only 1,699 cases of theft and 138 of criminal and house-trespass against 1,858 and 186 respectively in 1885. The increase is to be looked for under the head of nuisances and one or two local or special Acts, as is manifest from the following figures:—

		1885.	1886.
Offences under Stage Carriage Act	...	1,161	1,823
Cognizable public and local nuisances	...	322	1,284
Miscellaneous offences in streets under Act IV (B.C.), 1866, as amended by Act II (B.C.), 1886, sections 66, 68, 68A, 70	...	4,604	7,956
Cruelty to Animals Act I (B.C.), 1869...	...	2,829	3,389

As regards the last head, it is said that an increased agency for the detection of cases was employed by the Society for the Prevention of Cruelty to Animals; but the report does not explain the increased number of prosecutions under the Hackney Carriage Act. The increase under the head of public and local nuisances is no doubt in a great measure due to the opinion expressed by Sir Rivers Thompson in paragraph 7 of last year's Resolution, that cases of obstruction in the streets could be adequately dealt with under section 283 of the Penal Code. As regards miscellaneous offences in the streets, an amending Act was passed during the year empowering the police to arrest persons committing nuisances, found drunk, or guilty of riotous or indecent behaviour in the streets. Under Acts II and IV (B.C.) of 1866 the police had no such power. The new powers, which have always been exercised by the police in the mofussil, were much required, and appear to have been freely used. At the same time it is worthy of note that the number of non-cognizable nuisances under Chapter XIV of the Penal Code has decreased from 4,625 to 3,611. These offences comprise the adulteration of food and drugs, the sale of noxious food, the sale of any drug or medical preparation as a different drug or medical preparation, making the atmosphere noxious to health, negligence with regard to poisons, or machinery, or in pulling down buildings, and every kind of public nuisance not specially provided for. The Commissioner has made no serious attempt to give any reason for this large decrease of 1,000 cases. He merely remarks that "the decrease under the head of public nuisances occurred in consequence of the

amendment of the Police Act;" but it is obvious that the offences of drunkenness and riotous or indecent behaviour have no connection with the offences above enumerated. It is true that section 68A of the amending Act II (B. C.) of 1886, punishes the commission of ordinary nuisances in the streets, an offence which, prior to the passing of that Act, could only be dealt with under section 290 of the Penal Code; but Sir Steuart Bayley thinks it very unlikely that in 1885 the police could have applied for summonses under that section in as many as 1,000 cases. In the Government Resolution on the Report for 1884, the police were specially directed not to exceed their legal powers in this respect, and as a consequence the number of public nuisances fell from 6,469 in 1884 to 4,625 in 1885. A still further decrease of 1,000 cases requires some explanation, especially as there is reason to believe that some of the offences under the non-cognizable sections of Chapter XIV of the Penal Code, above enumerated, are of frequent commission. Complaints are not infrequently made in the vernacular newspapers of the sale of noxious articles of food, and many native gentlemen consider the adulteration of drugs and medicines to be so rife that they get all prescriptions made up by high class European chemists in spite of the comparatively high prices charged by them.

2. *Arrests and convictions in the Town and Suburbs.*—The number of persons arrested and summoned rose from 46,781 in 1885 to 54,309 in 1886. The number in 1884 was 54,888. The number of persons convicted was 46,815 against 39,600 in 1885. The percentage of convictions for cognizable offences under the Penal Code rose from 65 to 74, and under special and local laws from 93.54 to 94.22, while, as regards non-cognizable offences, there was a slight decrease in the ratio from 80.10 to 79.28. Out of 12,880 persons arrested for street offences, 12,090 were convicted, the increase being due to the amended Police Act referred to in the preceding paragraph. The increase in the number of convictions under the Hackney Carriage Act was 697, and under the Cruelty to Animals Act, 1,123. Out of a total of 11,219 Penal Code convictions in the Town and Suburbs, 6,314 persons were Hindus, 4,392 Mahomedans, 488 Christians, 15 Jains and Buddhists, and 8 Jews.

3. *False cases.*—There are said to have been only 130 false cases out of a total of 47,204 reported in the Town, and only 43 out of 6,736 reported in the Suburbs. In accordance with the orders contained in the Resolution on the Report for 1885, all complaints laid through a mistake of fact or law have been omitted from the returns. The Commissioner states that prosecutions were instituted in 82 cases; but, as was pointed out in last year's Resolution, it is incorrect and misleading to designate as prosecutions cases in which compensation is awarded to an accused person under section 552 of the Criminal Procedure Code. From the appended returns it appears that in the Town only 17 cases were instituted under the sections dealing with false evidence, false charges, and cognate offences, and process was issued in 13 only. The results were not satisfactory, 11 persons being acquitted and 2 convicted. The Commissioner has rightly omitted to insert in column 6 of Statement A, Part II, the cases which the Chief Magistrate reported to have been instituted of his own motion. From the particulars furnished by the latter, it is evident that prosecutions were not instituted under section 476, but that merely a sanction was given under section 195 of the Criminal Procedure Code. In the Suburbs there were 28 cases, 10 being instituted by the Magistrates *suo motu*; of 25 persons actually appearing before the Magistrates 13 were acquitted and 12 convicted. Again this year the Presidency Magistrates do not appear in a single instance to have availed themselves of the provisions of section 487 of the Criminal Procedure Code, which empowers them to try cases of false evidence, false charge, and other cognate offences committed before themselves. Sir Steuart Bayley requests that in future figures may be given in the body of the report distinguishing the number of actual *prosecutions* for false charges from those cases in which awards of compensation are made to accused persons. These figures have had to be ascertained, as last year, from the appended returns.

4. *Property stolen and recovered.*—The total value of the property stolen in Town and Suburbs rose from Rs. 97,504 to Rs. 1,19,249, while the percentage recovered rose from 49.65 to 51.83, almost the same percentage as in

1883, the figures for 1884 being abnormal for the reason stated in last year's Resolution.

5. *Ratio of cognizable crime to area and population.*—The ratio of cognizable crime to area and population in the Town and Suburbs was as follows:—

	Area in square miles.	Population.	Proportion of true crime to each square mile.	Proportion of crime to population.
Town	7.8	433,219	2,606.66	1 to 21.30
Suburbs	23	251,439	170.61	1 to 64.06

In this table cases under special and local laws, as well as under the Penal Code, are taken into account. Taking into computation only Penal Code offences, the ratio of criminality falls in the Town to 1 to 112.41, and in the Suburbs to 1 to 230.80. This difference would be very striking but for the fact that large portions of the Suburbs are more rural than urban. The number of cases not inquired into under section 157 of the Criminal Procedure Code was 326 against 219 in 1885. The Lieutenant-Governor does not consider this increase to call for any special remark.

6. *Cognizable crime in the Town.*—The following statement shows the number of true cognizable cases reported within the Town during the last three years:—

Crime.	1884.	1885.	1886.
Abatement of offence not committed	1
Class I. Offences against the State, public tranquillity, &c.	32	37	43
.. II. Serious offences against the person	223	167	186
.. III. Serious offences against person and property	162	139	190
.. IV. Minor offences against the person	69	40	50
.. V. Minor offences against person and property	2,309	2,156	2,085
.. VI. Other offences not specified above	2,020	1,855	3,419
Special and local laws	12,389	10,391	14,359
Total	17,204	14,786	20,332

The large increase under class VI and under special and local laws has already been sufficiently explained. The most satisfactory feature is perhaps that there were only two murders against five in 1885, and an average of six during the last five years. In one of these murders no clue could be obtained, though a reward of Rs. 500 was offered. The other was a case in which a low caste Mahomedan hacked his wife to pieces with a *dao*, because she objected to his intimacy with his son's mistress. He was executed. There were two cases of culpable homicide against four in 1885, and only one case of rape against an average of seven in the five preceding years. Other offences against the person do not call for any special remarks.

As regards offences against property, cases of house-breaking (including lurking house-trespass) increased from 146 to 193, the number in 1884 being 160. As many as 107 cases were detected, the ratio of detection thus rising from 49.31 to 55.95. The large majority of the house-breakings were of a petty character, as many as 53 having occurred during the day. Of the houses broken into 99 were *kutcha* and 67 *pucca*. The cases reported are in the ratio of 1 to 2,244 of the population; in 1884-85 the ratio of similar offences in England and Wales was 1 to every 10,310 of the population, but rose to 1 to 2,016 in the metropolis. It must be borne in mind that, owing to the number of *kutcha* houses, a burglary in India is in very many instances little more than a theft. Numbers of houses have no proper doors or fastenings, and a petty thief, who enters a mud hut by untying the string of an enclosing *jhump*, or a mat hut by cutting a hole in it, is classed in the returns as a burglar. Having regard to the very different circumstances of Calcutta and an English town, Sir Stuart Bayley agrees with the Commissioner that Calcutta is remarkably free from serious cases of house-breaking, and this fact shows that the ward and watch of the Town are kept up in an efficient manner.

The number of thefts was 1,607 against 1,640 in 1885 and 1,790 in 1884 while the cases detected increased from 772 to 856, and persons convicted from 831 to 930. These figures are satisfactory. There were 290 cases of criminal breach of trust against 261 in 1885. The persons convicted included 15 carters and 45 manjhees. As the Commissioner remarks, the police have little control over the evidence in these cases, restitution being frequently made out of court.

There were 96 cases under the Gambling Act against 65 in 1885, and an average of 78 during the five preceding years. Under the Stage Carriage Act there were 1,816 cases and 1,665 convictions, against 1,154 cases and 1,031 convictions in 1885. This increased activity of prosecution has not been explained. Sir Stuart Bayley is informed that there have been more prosecutions owing to the persistent disregard of the rule of the road shown by drivers, and especially drivers of bullock-carts, but such cases appear to fall under section 66^(s) of the Police Act, and not under the Hackney Carriage Act. No details of any sort are given, and Sir Stuart Bayley would like to know whether any of these prosecutions were under section 29 of the Act for omission to put up the table of fares, in English, Urdu, and Bengali, inside the carriage. This direction of the law is frequently disregarded altogether, and it is important that this direction of the law should be enforced in the interests of strangers and others visiting the town. Cases under the Police Act (street offences) rose from 4,604 to 7,956, the cause of which has been explained above. 98·87 per cent. of the persons placed before the Magistrates were convicted. The increase in the number of cases under the Shipping Acts was natural, as during the year 621 steamers and 425 sailing ships entered the port against 574 steamers and 389 sailing vessels in 1885. There were 5,820 convictions under the Act for the Prevention of Cruelty to Animals against 5,069 in 1885. Only 30 persons were discharged by the Magistrate. The Society is to be congratulated on the results of its increased exertions and employment of a larger number of agents.

7. *Cognizable crime in the Suburbs.*—The following is a comparative statement of true cognizable crime during the past three years:—

Crime.		1884.	1885.	1886.
Class I.—Offences against the State, &c.	...	7	16	27
" II.—Serious offences against the person	...	98	88	62
" III.—Ditto ditto person and property	...	95	96	115
" IV.—Minor offences against the person	...	23	23	35
" V.—Ditto ditto property	...	706	617	658
" VI.—Other offences not specified above	...	641	678	787
Special and local laws	...	1,401	1,450	2,241
Total	...	2,971	2,998	3,925

The increase of 927 cases occurred mainly under the head of Street offences punishable under the amended Police Act. The most significant feature in the returns is that there were no cases of murder, attempts at murder, or rape, and only one case of culpable homicide. Cases of grievous hurt decreased from 25 to 17, and there was only one case of highway robbery: cases of house-breaking (including cases of lurking house-trespass) have exhibited a steady increase during the past five years—56 in 1882, 101 in 1884, and 125 in 1886. This fact is attributed to the increasing numbers of coolies employed at the railway and dock-works in the Suburbs. The ratio of detections and convictions rose from 30·89 and 75·00 in 1885 to 39·20 and 84·21 in 1886. Of the buildings broken into only 20 were *pucca* and 74 *kutchas*; 17 were entered during the day and 77 by night. The number of thefts was 454 against an average of 445 during the past five years.

8. *Non-cognizable crime in the Town.*—The number of non-cognizable offences reported in the Town was 26,759 against 27,256 in 1885. There were 19 cases of forgery against 12 in 1885. One of these cases was characterized by a remarkable amount of daring in the offender, Gopal Chunder Dutt, the medical attendant of the Rajah of Mymensingh. The Rajah was anxious to obtain the privilege of exemption from personal attendance in the Civil Courts, and Gopal Chunder Dutt succeeded in cheating him out of Rs. 5,500 by presenting him with forged documents purporting to have been written by the Private Secretary to the Lieutenant-Governor and the Secretary of State for India. In another case a notorious gang of swindlers were sentenced to

terms of imprisonment ranging from three months to seven years for cheating the Assistant Secretary to the Maharajah of Tipperah to the extent of Rs. 5,000. There were 430 miscellaneous proceedings under the Code of Criminal Procedure, 413 being under Chapter XXXVI (Maintenance) and 17 under Chapter VIII (Security for keeping the peace or for good behaviour). There were no cases under Chapters IX or XXXV; Chapters X, XI, XII do not apply to the Town of Calcutta. There was one important case under the Post Office Act, in which some registered postal bags were stolen from the General Post Office. The accused, Chuttoo Kahar, was sentenced to five years' rigorous imprisonment.

9. *Non-cognizable crime in the Suburbs.*—The number of offences under this head increased from 2,435 to 2,796, the increase being almost entirely in conservancy prosecutions.

10. *Suicides.*—The number of persons who committed suicide in the Town and Suburbs was 71 against 54 in the preceding year, 56 being Hindus, 11 Mahomedans and 4 Christians (all men). The preponderance of Hindus is striking, as the number of Hindus is not much more than double that of Mahomedans. The favourite methods of suicide were hanging (29 persons) and opium (23). The number of accidental deaths was 275 against 247 in 1885. As many as 111 were from drowning, 38 were caused by falls from trees and buildings, 26 persons were run over by carriages and horses, and 91 were due to other causes not specified. 163 drivers of either public or private carriages were prosecuted for rash and furious driving, and 145 were convicted. Eight servants of the Tramway Company were prosecuted, but only one man was fined.

11. *Arms Act.*—The importation of fire-arms increased from 1,109 to 1,205, no fewer than 1,031 being imported by European firms. There was a considerable increase in the inland transport of arms and ammunition from Calcutta. The number of weapons sold by licensed dealers in Calcutta was 3,929 against 2,889 in the previous year. Of these 2,207 were guns of native manufacture imported from Monghyr.

12. *European Vagrancy Act.*—Forty-five persons were admitted to the Workhouse under section 5 of the Act. Three persons were deported under section 17 of the Act to Melbourne, London and Sydney. One was a tea-taster by profession, another a medical practitioner, and the third a jockey. Cases have come before the Lieutenant-Governor, from which it appears that men have been declared vagrants and sent to the Workhouse three or four times. Section 30 of the Act declares that, when a European British subject has been once declared a vagrant, or has been convicted under section 22 or section 23, he shall be subject, beyond the limits of the Presidency towns, to the provisions of sections 109 and 110 of the Code of Criminal Procedure. There is reason to believe that vagrants are not infrequently sent to Calcutta by mofussil Magistrates, and their attention will be drawn to the above section. If, on inquiry from the Commissioner of Police, they find that a man has been once declared a vagrant, they will be at liberty, if they think proper in the particular case, to deal with him under the provisions of the Criminal Procedure Code.

13. *Fire-Brigade Act.*—Twelve fires occurred in the Town and River, ten in the Suburbs, and fifteen in Howrah, resulting in a loss of property estimated at Rs. 1,75,750. The most serious fire was that in which a range of jute godowns in Nimtollah Ghat Street was burnt down. In the river the ship *J. W. Parker*, laden with jute and shell-lac, was burnt, the loss being estimated at Rs. 1,00,000. This fire was attended with the loss of one life.

14. *Strength and cost of the Police.*—The total cost of the Police in the Town was Rs. 4,74,544 against Rs. 4,59,344 in the previous year, and that of the Suburban Police was Rs. 1,62,187 against Rs. 1,53,810. The cost of the River Police was Rs. 31,140, of Government guards Rs. 46,176, and of additional constables Rs. 33,184. The cost of the Town Police was met as follows:—

	Rs.			
Paid by Calcutta Municipality...	3,07,586
Government contribution	1,02,528
Fees and fines	64,430

The increased expenditure, both in the Town and Suburbs, was mainly due to repairs of buildings.

15. *The Police Force.*—The number of up-countrymen in the force was 1,907, while there were only 189 Bengalis, the number having again fallen from 219 in 1885. The reason for the paucity of Bengalis is the same as that given in former reports, namely, that they do not care to undergo the fatigue, exposure, and severe discipline which police duty entails. The casualties in the force amounted to 375 or 12·14 per cent. against 10·88 per cent. in the previous year. Only 13 members were punished judicially against 33 in 1885. 102 men were dismissed against 54 in 1885 and 114 in 1884; only eight men deserted against an average of 22 in the five preceding years. There were 29 recorded deaths, giving a death-rate of only 9·39 per thousand; but these figures show only the number who die in hospital. It is said that a large number, who do not recover in hospital, go home on sick leave and die in their own country. The difficulty which the Commissioner states is experienced in getting good recruits is a serious matter. It is said that many new hands, after a few months' service, resign in order to take up such posts as durwans, in which they have an easy time and little or no responsibility. Owing to the increasing demand for labour in Calcutta and the higher wages given, it will no doubt be extremely difficult to maintain the force in its present state of efficiency, unless the pay of the constables is raised.

16. *Miscellaneous.*—During the year 115 certificates were granted for hotels and shops for the sale of excisable articles in the Town, and 39 in the Suburbs. Besides the above, licenses for 55 native eating-houses in the Town, and 14 in the Suburbs, were granted under orders of Government issued in October last. The form for licenses approved by Government in 1866 fixed the opening and closing hours at 5 A.M. and 10 P.M. respectively. The Commissioner asked that the closing hour might be extended to 2 A.M. Sir Rivers Thompson, while according his sanction, expressed his opinion that the hour was a very late one, and might be susceptible of some reduction. The Commissioner should now report whether it is necessary that these eating-houses should remain open so late as 2 A.M. In 1885 there was some discussion between the Police and the Excise Department as to the closing-hour for hotels, and it was then decided that late-closing licenses might be given up till 2 A.M., but that no music, dancing, or other entertainment should be allowed without the special permission of the Commissioner of Police. The chief cause of complaint on the part of the police was that their duties were seriously enhanced by their being kept up till late hours, and that premises licensed as hotels were converted into drinking-saloons, music, and dancing halls, in which a good deal of disorder prevailed. It should have been stated in the present report whether the additional condition for the police certificate granted under section 37 of Act IV (B.C.) of 1866 has enabled the police to exercise an adequate control over those places of entertainment, and whether, as a matter of fact, they are conducted in an orderly and proper manner. This is a matter of police regulation, and as such should have been alluded to in a report dealing with the police. 1,219 licenses for musical processions were granted during the year. Property to the value of Rs. 20,077 was picked up and brought to the Police Office, and of this 72·29 per cent. was restored to the owners.

17. *Old offenders.*—311 previously-convicted offenders were again convicted during the past year—19 by the Court of Sessions, and 292 by Magistrates. Of these, 61 persons had been convicted more than three times. The number of old offenders re-convicted in the Suburbs was 65. 131 notorious offenders were photographed on their release from jail, and their names registered by the Detective Department.

18. *Judicial work.*—13,583 cases were instituted in the Northern Division, 11,865 in the Southern Division, and 19,903 before the Bench of Presidency Magistrates. The corresponding figures in 1885 were 10,171, 11,051, and 19,131.

Of 44,904 persons appearing before the Courts, 40,263 were convicted and 4,547 acquitted. The ratio of convictions in cognizable cases was 94·76 in the Northern Court, 92·77 in the Southern Court, and only 62·05 in the Bench Courts; the corresponding figures in non-cognizable cases (excluding conservancy prosecutions) being 77·54, 79·62, and 51·90. The total amount of fines imposed in the Southern Division was Rs. 35,187-9-9, of which

Rs. 32,061-9-9 was realised; the corresponding figures in the Northern Division were Rs. 27,020-7 and Rs. 24,456-11. Sentences of whipping were passed on 79 persons, and eight juvenile offenders were sent to the Alipore Reformatory.

19. *Benches*.—The Chief Magistrate has again to animadvert on the infrequent and irregular attendance of many of the Honorary Magistrates. On this point he remarks: "The Benches of Honorary Magistrates have during the past year got through an appreciable amount of solid work; at the same time I think it desirable to suggest that the work so rendered would be more effective and of larger benefit to the public if performed with a more consistent regard for the duties and responsibilities which are entailed upon the office of a Magistrate." Mr. Reily points out the difficulty he has had to contend with in constituting the Benches and arranging for the work. It seems that requests to give early intimation of inability to attend are sometimes not complied with, and it often happens that, on the day fixed, only one of the three Magistrates invited is present. Sometimes one of the Magistrates appears more than an hour after the appointed time, and thus late sittings necessitate more frequent adjournments, thereby causing additional expense and trouble to the parties concerned. These evils are occasionally enhanced by the tendency to break up the sitting of a bench too early, before getting through the day's file of cases. The Chief Magistrate even states that he has occasionally been compelled to send out one of the assistants of his office charged with a sort of roving commission to entreat one or more of the Magistrates named in the list furnished to him to attend the Court. This "searching in highways and bye-ways" is by no means a creditable feature of the Bench administration in Calcutta. At the same time the Chief Magistrate bears testimony to the cheerful alacrity with which many of the Honorary Magistrates take their share of the work, and to the readiness evinced by a few others to attend the Court on the shortest notice, often at considerable inconvenience to themselves. Sir Stuart Bayley has carefully perused the list of attendance of Honorary Magistrates, and observes with satisfaction that eleven gentlemen have attended Bench sittings twice a month and oftener, one having attended on an average once a week. He desires to thank these gentlemen for the assistance rendered by them to the administration of justice.

25. *Personnel of the Force*.—Sir H. Harrison was Commissioner throughout the year, while the office of Deputy Commissioner was held successively by Mr. J. Eamhart, the late Mr. Hugh Wilkins, Mr. A. B. Barnard, and Colonel Wilkinson. The names of the Superintendents and other subordinate officers favourably mentioned have been noted.

ORDER.—Ordered that copies of this Resolution be forwarded to the Commissioner of Police, Calcutta, for information and for communication to the Presidency Magistrates, and to the Commissioner of the Presidency Division, for information.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Chief Secretary to the Govt. of Bengal.

NET GRANTS TO GOVERNMENT SCHOOLS IN BENGAL.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 16th June 1887.

RESOLUTION.

READ—

Correspondence from 1868 to 1877 on the subject of net grants to Government schools in the Lower Provinces.

Letter No. 2139, dated the 26th March 1886, from the Officiating Director of Public Instruction.

Report, of the Committee appointed under Government orders Nos. 95-97T—G, dated the 30th April 1886, to revise the assignments to net grant schools.

Letter No. 636T—G, dated the 27th August 1886, to the Director of Public Instruction.

Letter No. 7747, dated the 8th December 1886, from the Director of Public Instruction.

Letter No. 302, dated the 18th April 1887, to the Director of Public Instruction.

Letter No. 3072, dated the 3rd May 1887, from the Director of Public Instruction.

The Government of India, in a Resolution dated the 31st December 1868, directed that higher class Government schools should be divided into classes with a fixed scale of charges; that each class of schools should be allowed an assignment for a fixed term, on condition that a certain local income was realised, the Government assignment being carefully revised at the expiration of the term fixed; and that any surplus produced by local receipts should be recognized as assets belonging to the school. With reference to these orders, a Committee was appointed in 1872 to report on the amount of the grants which should be given to the different zillah schools. On proposals made by this Committee, and approved by Government, all collegiate and zillah schools were classified, a net grant was assigned to each for a period of five years, and it was provided that the unexpended balance at the end of each year should not lapse to Government, but

* For reasons stated in paragraph 18 of the Report of the Committee of 1886, the Revising Committee of 1877 did not take cognizance of the Hindu and Hare Schools. The increase of six schools since 1877 is thus explained—

Schools added since 1877.	Schools which have ceased to be Government Schools.
Palanow.	Howrah.
Julpigoree.	Hindu.
Patna City.	Hare.
Taki.	
Khulna.	
Darjeeling Middle English.	
Chittagong Collegiate.	
Midnapore ditto.	
Rajshahye ditto.	

2. Revision of the net grants.

should be re-granted to the school in addition to the fixed annual grant. In 1877 the net grants were revised. The Revising Committee adopted, as a principle of revision, the rule that the existence of a large surplus balance at the credit of any school should be a reason for reducing the Government grant; and by the orders of Government approving the revision, the total annual expenditure on net grants was reduced from Rs. 1,05,171 to Rs. 98,271. The grants sanctioned in 1877 have never undergone formal revision, but the aggregate amount has by degrees increased to Rs. 1,15,438, partly on account of the establishment of new schools*, and partly owing to the introduction of the system of granting periodical increments to the salaries of teachers.

Accordingly, in May 1886, a Committee, consisting of the gentlemen named in the margin, was appointed for the purpose of revising the assignments to net grant schools. The report received from the Committee was considered by the Lieutenant-Governor in August last but the issue of final orders upon the subject has been postponed on account of the uncertainty which existed as to the amount of the funds which would be available in future years for the purpose of assisting secondary education.

Mukerji
Bahadur.

3. The first recommendation made by the Committee is that the system of contract contingencies should not be maintained in schools supported by net grants. In this view the Lieutenant-Governor entirely agrees, and in fact the contract system was withdrawn from all net grant schools under orders conveyed in Financial Department's letter No. 921T—F, dated 22nd June 1886.

4. The Committee proceed to consider the best method of reconciling the system of fixed net grants with the existence of a graded service, in which salaries rise by periodical increments independently of the financial condition of the school in which the increase takes place. They recommend that net grants should be fixed for three years an estimate of the average expenditure of those years, prospective increments being taken into account. The Lieutenant-Governor accepts this recommendation, subject to the qualification stated by Sir Alfred Croft in paragraph 7 of his letter of the 8th December 1886 that the Director shall continue to have a discretionary power with regard to increase of allotments.

5. The next proposal of the Committee (paragraph 11) is that minimum rates of fees in net grant schools should be fixed as follows—

For schools on an English basis.

				A month.		
				Rs.	A.	P.
First and second classes	2	8	0
Third and fourth „	2	0	0
Fifth class	1	8	0
Sixth „	1	4	0
Seventh and eighth classes	1	0	0
Ninth class	0	12	0

For schools on a Vernacular basis.

				A month.		
				Rs.	A.	P.
First and second classes	2	8	0
Third and fourth „	2	0	0
Fifth and sixth „	1	4	0
Seventh and eighth „	0	12	0
Ninth and tenth „	0	8	0
Eleventh class	0	4	0

Sir Alfred Croft, in supporting this proposal, remarks that the fees shown above are at present exceeded in many schools in advanced localities. He also notices that the suggestion is in full accordance with the recommendations of the Education Commission. The Lieutenant-Governor sanctions the scale of fees proposed on the understanding that it shows only minimum rates.

6. The Committee proceed to recommend that, when the standard scale of fees is adopted, School Committees should be allowed to make additions to their school buildings, except where there is a probability of the establishment in the locality of private institutions. In this connection the Committee refer to the Bengal Government letter, dated 28th October 1871, in which mention is made of additions to school buildings as a proper mode of utilising surplus balances. The orders now in force on this subject are contained in the following extract from paragraph 12 of the Resolution on the Report of the Director of Public Instruction for 1881-82 :—

“ Mr. Rivers Thompson is of opinion that the growing demand for English learning should not be met by indefinite extensions of the accommodation now afforded by zillah schools, but that endeavours should be made by limiting the numbers admitted to those schools, to give free play to the efforts of private enterprise, and to the healthy spirit of competition which it engenders * * *. He would have it understood that he is not disposed to view with favour any extension of existing accommodation in Government high schools, unless there be no probability that in the particular locality private enterprise will not supply what is wanted.”

The Lieutenant-Governor does not consider it necessary to alter the rule here laid down.

7. The subject of contributions to schools by municipalities is under consideration, and will not be dealt with in this Resolution.

8. The financial result of the Committee's revision of the net grants of schools is as follows:—

	Existing allotment. Rs.	Revised allotment. Rs.
Zillah schools	75,588	71,700
Collegiate and branch schools	39,850	36,270
Total	1,15,438	1,08,030

In addition to the reduction made by the Committee, the Director of Public Instruction has suggested further economies in the net grants amounting to Rs. 2,890. Against the reduction of Rs. 10,298 must be set the sum of Rs. 3,600 to remain in the Director's hands for increasing net grants in special cases. The whole saving therefore amounts to Rs. 6,698, which has been

* The Midnapore School will receive a grant-in-aid of Rs. 1,000 per annum debitable to the grant-in-aid allotment.

increased by Rs. 7,500* by the recent transfers of the Midnapore and Berhampore Collegiate Schools to local management. The revision sanctioned by the Lieutenant-Governor is shown in the statement

appended to this Resolution. The grants made will run for three years from 1st April 1887, but they may be revised within that period to the extent of any contributions which may be made by municipalities.

9. In paragraphs 17 to 19 the Committee make proposals with regard to the Howrah, Hindu, and Hare Schools. No net grant has been proposed for the Howrah School, and upon this subject further information will be obtained from the Director of Public Instruction, as it is not clear how the institution can be maintained without assistance. With regard to the Hindu and Hare Schools which now together cost Government Rs. 6,000 a year, the Committee suggest (1) that the establishment should be reduced; (2) that the prize allowance should be cut down from Rs. 400 to Rs. 200 a year; (3) that the fee rates in the higher classes of the Hare School should be raised to Rs. 5 a month, so as to correspond with those in force in the Hindu School; and (4) that, if possible, the two institutions should be placed under one head-master as soon as such an arrangement can conveniently be carried out. Sir Alfred Croft considers the first three proposals just stated to be sound, and the Lieutenant-Governor, agreeing with the Director, desires that they be carried out. Sir Alfred Croft does not think that it would be possible to carry out the last proposal that the two schools should be placed under one head-master, and the Lieutenant-Governor concurs in this view.

10. With reference to the remarks made by the Committee in paragraph 23 of their report on the check exercised over the accounts of net grant schools, the Lieutenant-Governor accepts the Director's explanations to the effect that the checks are in fact sufficient.

11. Sir Steuart Bayley desires that the thanks of Government may be conveyed to the members of the Committee for their careful report.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Director of Public Instruction for information and guidance, and for favour of the report called for above regarding the Howrah School.

Ordered also that a copy be forwarded to the Finance and Commerce and Home Departments of the Government of India, and to the Accountant-General, Bengal, and Financial Department of this Office, for information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

The following statement shows the existing and revised grants :—

Table of grants for Zillah Schools.

Circles.	Schools.	Present grant.	Proposed grant.	Increase.	Decrease.

**REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND
FIRE-BRIGADE ACT, 1883, IN THE TOWN OF CALCUTTA FOR THE
YEAR 1886-87.**

The 16th July 1887.—The following report is published for general information.

COLMAN MACAULAY,

Secretary to the Government of Bengal.

No. 13, dated Calcutta, the 29th June 1887.

From—H. J. S. Corron, Esq., c.s., Offg. Chairman of the Corporation of the Town of Calcutta.

To—The Secretary to the Government of Bengal. Municipal Department.

I HAVE the honour to submit the following report, under section 30 of Act IV (B.C.) of 1883, of the jute screw and warehouses in the Town of Calcutta for the year ended 31st March 1887.

2. At the close of last year, there were 71 sanctioned warehouses on the register within the limits of the town. Of these, the licenses of two warehouses were cancelled during the year for default of payment of license fees, viz. (1) for Nos. 178 to 178-4, Upper Chitpore Road, and 2 to 2-2, Ramkanto Bose's Street, and (2) for Nos. 193, Durmahatta Street, and 55 Strand, thus reducing the number at the end of the year to 69, of which a complete list arranged according to the Acts under which they were originally licensed is appended to this report.

3. Three applications were received during the year—(1) from the Managing Agent, India Pressing Company, Limited, asking sanction to construct six jute godowns on land No. 58, Nimitollah Ghât Street; (2) from Baboo Suroop Chunder Roy, requesting a license to use the existing godowns at No. 135, Durmahatta Street, as a jute warehouse; and (3) from Baboo Mothoora Mohun Roy, soliciting license for storing jute in the newly-built godowns at No. 13-5, Hurro Chunder Mullick's Street. Of these three applications, (1) was sanctioned at the special meeting held on the 30th September 1886, and (2) and (3) were under consideration at the close of the year.

4. The license fees realized during the year from these 69 warehouses amounted to Rs. 21,250, or Rs. 1,237-8 less than last year. This falling off is owing to the assessments of some of the warehouses having been reduced, and the owners of two warehouses not having renewed their licenses.

5. During last year there was no case of fire, nor any infringement of the Jute Act on the part of the licensees.

6. The subjoined statement will show the receipts and disbursements of the Jute Warehouse Fund during the year under review.

Abstract Account of Receipts and Disbursements of the Jute Warehouse Fund
Dr. Ch.
for 1886-87.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 16th July 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Burdwan, July 16, '87	6.06	Weather—bright and hot. Prospects of crops good after timely and sufficient rain. Common rice has risen to about 21 seers per rupee. Public health good.
	Culina ...	3.28	
	Cutwa ...	5.73	
	Raneegunge ...	3.90	Weather—seasonable. Transplanting of rice, both early and late, is proceeding throughout the district. Prices of food-grains have slightly risen. Public health good.
	2 Bankura " 16, '87	4.47	
	Bishenpore ...	6.33	Weather—very unsettled. High winds with showers at constant intervals. Paddy seedlings are coming up well and sugarcane is thriving. Cattle-pox is spreading and is causing considerable damage.
	3 Beerbhoom " 16, "	2.64	
	Bamapore Haut ...	1.28	Heavy downpour at the beginning of the week; weather sultry at its end. State and prospects of crops excellent.
	4 Midnapore " 16, '87	7.44	
	5 Hooghly " 16, "	6.86	Weather—seasonable. Rainfall though less than the average amount has sufficed for present needs. <i>Aus</i> rice doing well. Transplanting of <i>amun</i> going on. Public health good.
Serampur ...	3.25		
Jehanabad ...	3.15		
PRINCIPAL DIV.	Howrah " 16, "	3.47	Rain throughout the district. Prospects favourable. Transplanting of <i>amun</i> seedlings in progress.
	Oolooberiah ...	4.45	
	Central Districts.		
	6 24-Pargahs, July 16, '87	Weather—seasonable with some heavy showers of rain. Crops promise well. Agricultural operations are being carried on. Prices easy. Public health generally good.
	7 Nuddea " 16, "	1.72	
	Kushtia ...	2.38	Weather—showery with occasional sunshine. East wind. Rice, jute, indigo on churs and sugarcane promise well. <i>Aus</i> on churs being harvested. Transplanting of <i>amun</i> going on, but retarded for want of rain. Indigo manufacture begun. Fever rather prevalent. Rivers rising rapidly.
	Meherpore ...	1.88	
	Chudanga ...	1.37	
	Ranaghat ...	1.63	Weather—cloudy with average rainfall except in the Sudder sub-division. Ploughing and planting continue, and rice crops doing well. Public health good.
	8 Khoolna " 16, '87	1.06	
	9 Jessore " 16, "	1.95	Weather—sultry. Paddy plants doing well. More rain wanted. Public health good.
	Jhenidah ...	1.03	
	Magurah ...	1.13	
	Narail ...	0.25	
	Bongong ...	1.74	
	10 Moorsheadabad " 16, '87	1.91	Weather—very hot. Rain at intervals. Transplanting of <i>haimanti</i> paddy going on. <i>Til</i> , sugarcane, and jute doing well. Public health good.
	Talbagh ...	3.91	
	Kandi ...	2.32	
RAJSHAHY DIV.	Jungipur ...	3.87	Weather—clear and hot. Present prospects fair.
	11 Dinagpur " 16, '87	1.80	
	Thakurgaon ...	0.65	Weather—fair. Prospects of crops, where not injured by floods, are favourable. Public health generally good.
	12 Rajshahy " 16, '87	2.09	
	Nattor ...	1.15	
	Nowgong ...	1.87	Weather—hot. Dry weather during week has been favourable for harvesting <i>aus</i> . Planting of <i>amun</i> about half finished. All crops doing well except where injured by floods. Public health fair.
	13 Rangpur " 16, "	1.00	
	Gaibanda ...	0.76	
	Kurigram ...	0.57	
	Nilphamari ...	0.76	
	14 Hogra " 16, '87	0.56	Weather—windy in the first part of the week and after that hot and close. Crops uninjured by floods are good, but rain is now wanted. Public health fair.
	Sherpur ...	1.09	
	Nowkhilla ...	1.46	
	15 Pubna " 16, '87	3.7	Seasonable rain. Prospects of crops good. General health good.
	Feraigunge ...	2.04	
	16 Darjeeling " 16, '87	10.40	A heavy gale for two days. Terai excessively hot. Constant showers. State and prospect of crops good.
	17 Julpigoree " 16, "	1.96	
	Eastern Districts.		
DACCA DIVISION.	18 Dacca, July 16, '87	3.04	Weather—sultry. Rain almost every day. Harvesting of jute going on. Paddy plants being transplanted. Prospects continue good. Public health generally good.
	Manickgunge ...	3.1	
	Munshigunge ...	4.20	
	Narsingunge ...	4.07	Weather—cloudy and rainy. Prospects of crops good. General health good.
	19 Farreedpore " 16, '87	1.65	
	Gauland ...	2.5	Weather—hot and rainy. High east wind for about three days continuously. Cultivation of <i>amun</i> going on. General health good.
	Madaripore ...	1.17	
	20 Backergunge " 15, '87	2.26	
	21 Mymensingh " 15, '87	0.58	Weather—hot with strong winds. Rivers falling. Prospects of crops good. Transplanting of rice has begun.
	Jamalpur ...	0.93	
	Kishoregunge ...	1.19	
	Attea ...	1.05	
	Netrokona ...	1.64	

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong, July 19, '87	0.95	Weather—variable. Ample rain in south of district. More rain wanted in other parts. Prospects of <i>aus</i> fair. <i>Amun</i> being transplanted. Prices stationary. Cholera still reported.
	23 Noakhally Fenny „ 15, „	3.35 5.13	Occasional showers, but not yet sufficient rain, strong south-easterly wind since last two days. <i>Aus</i> is being cut in the Fenny sub-division. Land is being prepared for transplantation of <i>amun</i> . More rain wanted. Public health good.
	24 Tipperah July 14, '87	1.31	Weather—cloudy and showery, but on the whole not much rain. State and prospects of crops very good all round. No appreciable damage as yet caused to the crops from the inundation in the north of the district, or from the insufficient rain in the south.
	Brahmunbariah „ „	0.85	
	Chandpur „ „	4.50	
CHITTAGONG HILL TRACTS.	25 Chittagong Hill „ 12, '87	3.28	Weather—cloudy and rainy throughout the week. Seed paddy doing well, but more rain wanted. <i>Jooms</i> progressing favourably.
	Hill Tipperah „ 14, „	1.55	Weather—hot and rainy. <i>Amun</i> paddy being transplanted. <i>Satya</i> paddy, sugarcane, <i>til</i> and <i>joom</i> crops doing well. Public health good.
BEHAR.			
PATNA DIV.	26 Patna July 16, '87	1.59	Weather—hot, often cloudy and rainy. Maize, <i>kaeni</i> and paddy growing well. In some places they are still being sown. Sowing of <i>rahar</i> and <i>jowar</i> going on. Cholera still reported from the interior.
	Barh „ „	2.70	
	27 Gya „ 16 „	2.57	Weather—hot. Indian-corn, <i>marua</i> and sugarcane doing well. Cholera, fever, and small-pox still reported from some stations.
	28 Shahabad „ 16 „	2.48	Weather—seasonable. Prospects of <i>bhadoi</i> crops excellent. Sugarcane doing well. More rain wanted for paddy transplanting. Cholera reported generally. Prices stationary.
	Buxar „ „	1.53	
	Sasaram „ „	3.06	
	Bhabuah „ „	3.47	
	29 Durbhuanga „ 16 „	3.08	Weather—occasionally cloudy. Transplanting of <i>marua</i> and paddy begun in some places. Prospects of <i>bhadoi</i> continue favourable. Prices remain unchanged. Cholera abating.
	30 Mozufferpore „ 16, '87	1.84	Weather—cloudy with heavy showers daily. A break in the rains is anxiously looked for, as incessant wet weather has much interfered with weeding and clearing of <i>bhadoi</i> crops. Rice in good order. A good many cases of cholera and fever reported from the Sudder and Sitamarhi sub-divisions.
	Hajipur „ „	3.52	
BHAGULPORE DIV.	Sitamarhi „ „	1.14	
	31 Saran „ 16 „	2.08	Weather—cloudy with occasional sunshine. Strong easterly breeze for the last two days. <i>Bhadoi</i> sowings completed. Transplanting of paddy has begun. Indigo manufacture going on. Cholera prevalent all over the district.
	Sewan „ „	1.91	
	Gopalgungo „ „	2.54	
	32 Champaran „ 16 „	0.88	Weather—hot, cloudy and fair alternately. <i>Bhadoi</i> crops being weeded. More rain is wanted for the transplanting of paddy on high land. Prospects of standing crops good. Deaths from cholera much diminished. Small-pox reported from Bettiah town. Prices stationary.
	33 Monghyr July 16, '87	0.57	Weather—hot and generally cloudy. Prospects of crops continue good, but the Ganges is rising fast and causing damage to young <i>bhadoi</i> crops on low lands. Cholera still prevailing in places.
	Begusarai „ „	1.57	
	Jamui „ „	2.81	
	34 Bhagulpore „ 16 „	0.48	Weather—seasonable. <i>Bhadoi</i> prospects improving, but still not good in the centre of the district. Rice and <i>marua</i> doing well. Transplanting in progress. A little cholera still hangs about.
	Mudchpura „ „	3.23	
BHAGULPORE DIV.	35 Purneah „ 16 „	2.28	Weather—fine with occasional showers. State and prospects of crops favourable. <i>Aghani</i> being transplanted.
	Kishengunge „ „	0.98	
	Arrareah „ „	1.01	
	36 Maldah „ 16 „	1.22	Weather—seasonable; stormy in the middle of the week. Prospects of <i>bhadoi</i> crops good, except in thana Khurh, where floods have done considerable damage. Transplanting of winter paddy going on. Common rice selling at 20 to 21 seers per rupee. Public health good.
	Chanchal „ „	1.10	
	Shibgunge „ „	2.14	
	37 Sonthal Perghe „ 16 „	1.82	Weather—cloudy and wet with strong east winds. Indian-corn somewhat injured by excessive rain. Transplanting of paddy has begun everywhere. Public health generally good. A few cases of cholera reported in the Godda sub-division.
ORISSA.	Deoghur „ „	3.16	
	Godda „ „	2.11	
	Jamtara „ „	4.80	
	Pakour „ „	2.50	
ORISSA DIV.	Kajmehar „ „	1.41	
	38 Cuttack July 15 '87	1.04	Weather—cloudy and seasonable. Rice plants growing well. <i>Beali</i> being wooded, but requires more rain. Common rice 18½ seers per rupee in town, and 23 to 26 seers in the interior. Sporadic cases of cholera reported; public health otherwise good. Rivers rising.
	39 Pooree „ 14 „	1.69	Weather—cloudy and stormy. Transplanting of <i>sarad</i> rice going on, but more rain wanted, and plants in places being damaged by want of water. Common rice 24 seers 5 chittacks per rupee in the Sudder sub-division, and 22 seers 5 chittacks in the Khoorda sub-division. Cases of cholera reported from most parts of the district.
	Khoorda „ „	2.16	
ORISSA DIV.	40 Balasore July 15, „	3.30	Weather—cloudy with occasional showers of rain. Prospects of crops good. Transplanting of paddy has begun. Public health fair.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, July 15, '87	4.42	Weather—seasonable. Heavy rain. Transplanting of rice in progress. Agricultural prospects very favourable; all crops doing well. Cholera in places; otherwise general health good.
42	Lohardugga „ 16 „	3.22	Weather—seasonable. Rain almost throughout the week. Prospects of crops continue favourable. No change in prices. Cholera still reported. Public health otherwise good.
	• Pakumow „ „	9.44	
43	Singbhoom „ 15 „	7.77	Weather—cloudy with heavy rain. Agricultural operations in full swing. Prospects good. Cholera reported from Bahargora, Dhalbhoom; otherwise public health good.
44	Manbhoom „ 16 „	4.58	Weather—seasonable. Rain throughout the district, and prospects of crops (bhadoi and paddy seedlings) so far excellent. Public health good everywhere.
	Govindpur „ „	1.02

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns missing, the corresponding spaces in the total rainfall columns are left blank.

Calcutta, the 19th July 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS
TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
15TH OF JULY 1887.**

At the close of the previous week a small barometric depression, the centre of which had passed inland close to Saugor Island on the 7th, had rapidly filled up in South Bengal on the 8th, and had almost ceased to exist. It had, however, brought up moderate to heavy rain in its advance. On the following day, that is on Saturday, the 9th, pressure fell decidedly rapidly at some of the stations in Central Bengal, and a distinct barometric depression was formed over this area. The depression was accompanied by a decided cyclonic circulation of winds, for at Calcutta wind was westerly, at Burrisal south-westerly, at Furrcepore south-easterly, at Berhampore north-easterly, and at Burdwan north-westerly. At Jessore and Krishnagore it was calm. On Sunday, the 10th, the depression had developed very rapidly, and had moved slowly in a westerly direction. On this day pressure fell rapidly at the stations in Central and Western Bengal and in Chutia Nagpur, the fall at some stations almost equalling 0.15", while many stations, such as Calcutta, Burdwan, Bankoora, and Raneeagudge, &c., showed falls considerably exceeding a tenth of an inch. Winds also decidedly increased in force, and there was again on this day a strong cyclonic circulation of winds round the centre of the feeble storm. The centre was near Burdwan, where a pressure of 29.361" was registered, and towards which point baric gradients were decidedly steep. The small storm was fed by a powerful monsoon current, and heavy rain was brought on both the Saturday and the Sunday to the districts affected by the storm. On the following day pressure fell rapidly at Allahabad and Benares, and the depression, which was on the previous day in West Bengal, had apparently been transferred to this district, while on the 12th it had advanced into Bundelkund, and on the 13th into the north-east of Rajputana, where it apparently filled up. In the rear of the advancing depression a strong monsoon continued to blow over Bengal, bringing up moderate rain.

On Monday, the 11th, also pressure began to fall off the east coast of the Bay, and this continued on the 12th, when pressure became decidedly low over South-East Bengal, and it was evident that a small barometric depression was forming either over the sea area just to the south of the Sunderbans, or over the land area to the south of Jessore. On the 13th a distinct depression was developed, and at 10 A.M. on this day its centre was nearly between Calcutta and Saugor Island. During the same afternoon the centre passed only a short distance to the south of Calcutta in a westerly direction, and on the morning of the 14th the small storm had passed into the Central Provinces and Central India. This storm again advanced in a westerly direction, and on the morning of the 15th it was near Moshungabad, but it did not finally disappear till the 17th. The subsequent history of this storm of course will belong to the meteorology of the week following. This storm was small, but with a moderately steep gradient, and pressure at Calcutta fell to about 29.3". It was accompanied by a clearly marked cyclonic circulation of winds, but though the wind force at the land station was only moderate, at the head of the Bay, during its formation and advance, very strong winds were blowing, and weather was decidedly squally, if not rather stormy, though at no time was the storm of any particular intensity.

Bengal has therefore been under the influence of two depressions during the week, both of which brought up heavy rain. Both these depressions have passed through parts of South-West Bengal and Chutia Nagpur, though the first only passed through South Behar. The influence of such storms as these in bringing up rain and in determining its distribution is shown in a very marked way by the rainfall of the week, for these three districts have received falls in excess of the normal, while all other districts have been in defect. The heaviness of the falls has been in some instances very great, and thus on the 9th Bolpore and Hetampore in the Beerbhoom district, and Cutwa in Burdwan, received about 5 inches of rain each, while the following stations received from about 3 to 4 inches:—Alipore, Burdwan, Hooghly, and Bishenpore and Malihra in the Bankoora district; on the 10th the heaviness of the rainfall increased, and Ghatal reported 7.15 inches, Minnapur 5.83 inches, Alipore 4.66 inches (making nearly 8 inches in the two days), and Tumlook 4 inches; also in Chutia Nagpur, on the 10th, the following heavy falls were reported:—Ghatsila 6.28 inches, Palamow 5.43 inches, Chyebassa 4.90 inches, Garwah 4.25 inches, and Karagdeha 3.5 inches, while there were numerous other heavy falls in the western part of the province. In connection with the second small storm the rainfalls reported were not so heavy as in the first, though many falls of 2 and 3 inches were recorded near the path of the storm.

Pressure—As might be expected, has been decidedly below the normal over the whole province, the defects at those stations which have been considerably influenced by the depressions being larger than a tenth of an inch, and thus at Burdwan the defect of the mean pressure for the week has been 0.123", at Calcutta 0.113", and at Saugor Island 0.105", while at the stations at some distance from the paths of the depression, pressure has been in defect of the normal by much smaller amounts, as at Purneah, where the defect is 0.063", and at Durbhanga where it is 0.078". It will thus be seen that pressure has been largely below the normal over the whole province of Bengal. The defect in pressure in Assam is also considerable: thus at Silchar it is 0.107", at Dhubri 0.084", and at Sibsagar 0.04".

Temperature.—The mean temperature for the week has been in defect of the normal in all districts, the defects being largest in Orissa, where they average 2.4° ; they are also large in South-West Bengal, Chutia Nagpur, and South Behar, where they vary from 1° to 2° , while in the remaining districts in Bengal the defects are small. In Assam, on the other hand, the mean temperature for the week has been 0.7° in excess of the normal.

Rainfall.—From the foregoing description of the meteorology of the week, it will be seen that the heaviest rainfalls have occurred in South-West Bengal, Chutia Nagpur and South Behar, where the average amounts received have been decidedly larger than the normal, while in the other districts, owing to the indraught towards the small storms, the rainfall has been below the normal. In the districts of South Behar, South-West Bengal, Chutia Nagpur and East Bengal, rainfall has averaged about 3 to 4 inches, while over the remainder of the province the falls have averaged from 1 to 2 inches. The actual average falls in the seven meteorological districts, expressed as a percentage of the normal falls for the same period, will be as follows:—South-West Bengal 152 per cent., Chutia Nagpur 150 per cent., South Behar 110 per cent., East Bengal 84 per cent., North Behar 79 per cent., North Bengal 65 per cent., and Orissa only 45 per cent. Taking each of these meteorological divisions as having an equal value in the calculation, the rainfall for the province for the week has equalled 98 per cent. of the normal. The foregoing numbers do not, however, fully show how exceptionally heavy the fall has been in some districts. Thus in South-West Bengal the districts which have received falls considerably larger even than indicated by the above percentages have been Midnapur, Bankoora, 24-Pergunnahs, Howrah and Hooghly, while in Chutia Nagpur the Lohardugga and Singhbhum districts have received the heaviest falls. On the other hand the following districts have received extremely defective falls:—In Orissa, the Pooree and Cuttack districts; in East Bengal, Mymensingh; and in North Bengal, Dinagepore and Rungpore.

In Assam the following are the amounts of rainfall recorded during the week:—¹⁰ Silchar 5.02 inches, Sibsagar 2.25 inches, and Dhubri 0.56 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 15th of July 1887:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The mean pressure of the seven days	29.468
The average pressure of the corresponding period for 24 years, S. G.'s Office	29.535
The total number of hours of bright sunshine	18.6
The maximum possible number of hours of sunshine	93.6

The mean temperature of the seven days	81.6
The average temperature of the corresponding period for 24 years, S. G.'s Office	83.7
The extreme variation of temperature	14.3
The maximum temperature	90.7

The highest velocity of the wind in one hour	20
--	----

The highest pressure of wind on one square foot	9
---	---

The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	85

The total fall of rain from 10th to 16th July 1887	4.46
The average fall of the corresponding period for 24 years, S. G.'s Office	2.86
The total fall from 1st January to 16th July 1887	30.99
The average fall of the corresponding period for 24 years, S. G.'s Office	27.79

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew.

A. PEDLER,

For Offg. Meteorological Reporter to the Govt. of India.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 10th to 16th July 1887.

The mean temperature of the seven days ... 81.1
The extreme variation of temperature ... 16.0
The maximum temperature ... 92.0
The mean relative humidity ... 89
The total fall of rain from 10th to 16th July 1887 ... 8.43

The mean temperature and humidity are obtained by applying to the mean of the 10th, 16th, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;
The 18th July 1887.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE birth and death returns of the principal Municipalities in Bengal, for the week ending 2nd July 1887, disclose the following results:—

1. That the ratio of births during the period above mentioned stood at 20, and that of deaths at 24·8 per 1,000 of population, the records of the preceding week presenting 13·3 and 20·2 per 1,000, respectively, indicating a large advance in the registration of both the events.

2. That births and deaths were recorded at the highest rates from the following Municipalities:—

Births.			Ratio per mille.	Deaths.			Ratio per mille.
Airah	131·6	Puri	199·3
Durbhanga	36·2	Gya	52·7
Gya	34·8	Bhagulpore	40·8
				Darjiling	39·0
				Beauleah	36·8
				Durbhanga	33·9
				Arrah	33·5
				Serampore	29·5

3. That the mortality from the death-causes specified in the appended statement stood as follows:—

		Ratio per mille during the weeks ending—	
		2nd July 1887.	25th June 1887.
Cholera	5·5	3·5
Small-pox	·2	·1
Fever	8·6	7·5
Bowel-complaints	2·9	2·3
Injury	·5	·4
Other causes	7·1	6·4

indicating chiefly that, in comparison with the preceding week, there occurred considerably enhanced mortality from cholera and fever, particularly from the former.

4. That the following Municipalities returned conspicuously high death-rates from cholera, fever and the maladies coming under the head of "Other causes," the rest of the diseases mentioned in the above table not exhibiting any noticeable local severity:—

<i>Cholera.</i>			<i>Fever.</i>			<i>Other causes.</i>		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Puri	...	167·8	Beaulah	...	31·1	Gya	...	36·9
Bhagulpore	...	11·8	Arrah	...	21·5	Bhagulpore	...	14·5
Durbhanga	...	5·5				Puri	...	10·5
Patna	...	3·9						
Suburbs of Calcutta	...	2·7						

It will be observed that the mortality from cholera in the Puri town was considerably greater in comparison with its incidence during the preceding week.

5. That the casualties in relation to *Sex*, *Class* and *Age*, were returned at the rates indicated below:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	25·7	Christians	...	34·8	Under 1 year	...	207·5
Females	...	23·7	Hindus	...	27·3	1 and under 5 years	...	38·9
Ratio of male deaths to every 100 female deaths		122	Mahomedans	...	18·7	5	10	10·3
			Budhists	...	48·4	10	15	15·4
						15	20	9·9
						20	30	11·1
						30	40	15·3
						40	50	25·3
						50	60	42·6
						60 years and upwards		43·9

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

and census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans is constant be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

ERRATUM.

The 21st July 1887.—In the heading of column 2 of the marginal statement in paragraph 1 of the Government Resolution, dated the 16th July 1887, published at page 1258 of the Supplement to the *Calcutta Gazette* of the 20th idem, for “schools which have ceased to be Government schools” read “schools which do not receive net grants.”

P. NOLAN,

Secretary to the Govt. of Bengal.

ADOPTION OF A SON BY THE MAHARANI OF BURDWAN.

REVENUE DEPARTMENT - LAND REVENUE.

Calcutta, the 26th July 1887.

RESOLUTION.

READ—

- Letter from the Board of Revenue, No. 356A, dated the 16th April 1885, with enclosure.
- Letter from the Board of Revenue, No. 96A, dated the 8th February 1886, with enclosure.
- Letter from the Board of Revenue, No. 99A, dated the 8th February 1887, with enclosure.

- Letter from the Board of Revenue, No. 428A, dated the 17th June 1887, with enclosure.
- Letter from the Solicitor to the Government of India, No. 745, dated the 9th July 1887, and enclosure.
- Petition from the Dowager Maharani of Burdwan, dated the 13th July 1887, and enclosure.

The late Maharajádhiraj Aftab Chand Bahadur, of Burdwan, who died in March 1885, left a will by which his widow, the Maharani Benodeyi Devi, is

bound, under a heavy penalty, to adopt an heir, the only limit placed on her choice being a prohibition against the selection of one of the testator's brothers. She was at first disposed to adopt the younger son of the Hon'ble Lalla Bun Behari Kapur, but before any definite proposal could be made, the child unfortunately died. Her selection fell next on her half-brother, and the Court of Wards recommended that the consent of the Lieutenant-Governor, necessary under the provisions of Bengal Act IX of 1879 to any adoption made by a Ward, should be accorded, provided the legal validity of the act could be clearly established. The question whether the adoption of a half-brother would be valid according to the law binding on the Burdwan family was accordingly referred by this Government for the consideration of the Advocate-General, who, having associated with himself Mr. Pitt-Kennedy, Barrister-at-law, returned the opinion that such an adoption would be invalid. The Lieutenant-Governor thought himself bound to act in conformity with this advice, and accordingly declined to accept the Maharani's proposal. She questioned the correctness of the view taken by the legal advisers of Government, producing several opinions on the other side, obtained from counsel learned in the law, and the matter was still under discussion when, in January last, this child also died.

In the following month the Maharani intimated a desire, which she has since very strongly pressed upon the Court of Wards and upon Government, to adopt the only surviving son of Lalla Bun Behari. To this arrangement the Dowager Maharani Narain Kumari Devi, an influential member of the Burdwan family, objected, on the ground that the boy being an only son, and the son of the adopter's sister, the act would be invalid according to the Benares School of Hindu law, to which the Burdwan family, as she alleged, is subject. On behalf of the younger Maharani, it was stated in reply that the family, having come originally from the Punjab, and never having abandoned its ancient customs, is in fact bound in this matter by the Hindu law prevalent in that Province, which permits adoptions such as that which it is now proposed to make. The records throwing light on the question as to the school of law by which the family has been guided since its settlement in Bengal have been examined with great care by the Court of Wards, and discussed in an elaborate report. The conclusion at which the Court arrived after considering all ascertained facts, and hearing able counsel on both sides of the question, was that the adoption would not be illegal, and may properly be sanctioned by Government. All the papers of the case, including copies of the documents filed by the parties, were then forwarded by this Government for the consideration of the Standing Counsel, as the Advocate-General had been engaged in the case. Mr. Bonnerjee, acting with Mr. Hill, Barrister-at-law, gave the following opinion:—

We have carefully considered this case by the light of the materials placed before us, and are of opinion that if, as is asserted on behalf of the younger Maharani, and as would seem to have been practically allowed by the Dowager Maharani, the founder of the Burdwan Raj family came from the Punjab and settled at Burdwan, there can be no doubt whatever but that the family must be presumed, unless and until the contrary is proved, to be governed in all matters of marriage, adoption, inheritance, and others in which the Hindu law is still applicable to the Hindus by the laws, manners, usages, and customs which were in force in the Punjab at the time he left. In this case we have in addition to the presumption of law to which we have referred, the fact that, *ex concessu*, the adoption of the Maharajah Aftab Chand Bahadur himself, if valid at all, was valid by virtue of the Punjab customs; and we think that the burden of the Dowager Maharani to show that the family ever abandoned the Punjab customs, so far as these were inconsistent with the law of the Benares School of the Hindu law, and adopted the law of this school in its entirety, will be an exceedingly difficult one.

We are also of opinion that, according to the Punjab customs applicable to Khettries as interpreted and enforced by the Chief Court of that Province, it is competent to a person to adopt the only son of his sister, and we see no reason in law why His Honour the Lieutenant-Governor should withhold his sanction under section 61 of the Court of Wards Act, 1879, to the proposed adoption.

Upon the difficult point of law involved, the Lieutenant-Governor considers that he is bound to accept this opinion of his professional advisers, given after the facts had been ascertained as fully as was possible without a trial before a Court of law, and after the whole subject in all its bearing had been exhaustively discussed. Without attempting to repeat the arguments upon which the finding of the legal advisers of Government is founded, it may be noticed that there seems to be no evidence to support the assertion that

members of the Burdwan family are bound by the Benares School of law, which prevails neither in the Punjab, the place of their origin, nor in Bengal, the place of their domicile, but in a region with which they seem to have never had any connexion. It moreover appears that the late head of the family, the Maharajah Aftab Chand, was, when adopted, an only son, and, by blood, the nephew of the lady who became his mother by adoption: an instance from which it may be inferred, on the usual assumption of the validity of uncontested adoptions, on the strength of which a great family has been maintained, that the Burdwan Maharajahs have not been, and therefore are not now, governed by the stricter school of Hindu law prevailing in Benares.

Sir Stuart Bayley would gladly have seen the selection so made as to command the approval of all the members of the family, and, at a personal interview with the Maharani of Burdwan, having first ascertained that her choice was really spontaneous, he pointed out to her that perseverance in it would lead to friction, probably to litigation and expense. He urged upon her the advantage of adopting some child to whom no objection would be made by any of her relatives, if such a boy could be found. As notwithstanding this consideration, which was made quite plain to her, she declared very clearly and forcibly that, having satisfied herself that no legal obstacle existed to the adoption of the son of Lalla Bun Behari, she desired to take him and no other, and that he was her definite and only choice, the Lieutenant-Governor does not think it right to refuse his sanction to the selection, the right of making which, according to her own discretion, belongs to the widow, not only by Hindu custom, but also by the direct provision of the will left by the late Maharajah. Sir Stuart Bayley has seen the boy, and has not found that, apart from the question of law, there are any considerations, personal to the child, which could possibly furnish ground for refusing sanction to the adoption. The opposition offered by the Dowager Maharani is certainly an objection of a very serious character, but Sir Stuart Bayley has ascertained that it is based only on a view of the law, which he is advised is mistaken. His Honour has, at a personal interview, expressed to the Dowager Maharani his hope that she will be able to restore peace to the Burdwan family by accepting the decision which the able barristers consulted have arrived at upon this abstruse question of Hindu law.

Under these circumstances, the Lieutenant-Governor gives his consent under section 61, Bengal Act IX of 1879, to the adoption of the only son of Lalla Bun Behari by Maharani Benodeyi Devi, widow of the late Maharajah Aftab Chand Bahadur of Burdwan.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT FOR THE SUBURBS OF CALCUTTA FOR THE YEAR 1886-87.

The 20th July 1887.—The following report is published for general information.

COLMAN MACAULAY,
Secy. to the Govt. of Bengal.

No. 38MM, dated Calcutta, the 27th June 1887.

From—A. SMITH, Esq., Commissioner of the Presidency Division,

To—The Secretary to the Government of Bengal, Municipal Department.

WITH reference to the provisions of section 30 of the Licensed Warehouses and Fire-Brigade Act, IV (B.C.) of 1883, I have the honour to submit herewith the annual report on the working of the above Act in the suburbs of Calcutta during the year 1886-87, together with the usual statements, viz.—A, showing the different warehouses in the suburbs for which licenses were granted, and the amount of license fees realized from them during the year; B showing the receipts and disbursements under the Act, as prescribed by Government letter No. 723, dated the 20th August 1881; and C, the details of fires which occurred in the suburbs during the year of report.

2. The number of jute mills, cotton mills and hand-screws in the list was the same as in the last year. viz., 6, 2 and 2 respectively, and that of hydraulic presses and warehouses for the storage of jute increased from 11 and 96 to 12 and 103, showing an increase of 1 and 7 war houses respectively. The Asiatic Jute Mill, as in the previous year, was not worked, and one of the two hand-screws did no work during the year. Of the 103 jute warehouses in the list, 28 remained unoccupied during the year against 26 in the year preceding, as will appear from the notes in the column of remarks of statement A, in which the other necessary particulars connected with the working of the ware-houses are also furnished.

3. The total amount of license fees realized from all classes of warehouses during the year amounted to Rs. 57,225-10, viz., Rs. 21,644-13 from hydraulic presses, Rs. 968 from jute mills, Rs. 240 from cotton mills, Rs. 480 from hand-screws, and Rs. 33,912-13 from jute warehouses; against a total amount of Rs. 27,792-9, viz., Rs. 10,112-6-6 from hydraulic presses, Rs. 484 from jute mills, Rs. 120 from cotton mills, Rs. 322-8 from hand-screws,

	Rs.	A.	P.
Hydraulic presses ...	11,512	6	6
Jute mills ...	484	0	0
Cotton mills ...	120	0	0
Hand-screws ...	157	8	0
Jute warehouses ...	17,159	2	6
Total ...	29,433	1	0

and Rs. 16,753-10-6 from jute warehouses realized during the year 1885-86. It will thus be seen that there has been a total increase of Rs. 29,433-1 in the license fees during the year of report, as compared with the preceding year, as per details shown in the margin. This large increase is chiefly due to the enhancement of the rate from 5 per cent. to 10 per cent. during the year (*vide* paragraph 3 of report for 1884-85).

4. Statement C contains the number of fires which occurred in the suburbs during the year under review, the localities where they broke out, their causes, the extent of damage, &c., done, and other necessary particulars connected therewith. It is satisfactory to notice that during the year only six fires occurred, causing a loss to the extent of Rs. 7,440, against 16 and Rs. 11,000 in the preceding year.

A.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 23rd July 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Bardwan, July 23, '87	3.13	Weather—showery with high temperature. State and prospects of crops favourable. Common rice 20 to 21 seers per rupee. With the exception of two local outbreaks of cholera, public health good.
	2 Bankura „ 23, '87	2.00	Weather—rather dry for the season. Transplantation of rice proceeding, but more rain wanted. Prices stationary. Public health good.
	3 Bishenpore „ 23, '87	3.15	Another break in the rains, but the heat is moderated by high winds. Rain is urgently needed for the transplantation of the paddy seedlings. Price of rice has risen probably in anticipation of a short crop. Sugarcane is promising. Public health has deteriorated owing to drought; fever very rife in the interior.
	4 Beerbhoom „ 23, '87	1.40	Weather—rainy with high winds. State and prospects of crops excellent all over the district.
	5 Rampore Haut „ 23, '87	0.97	Weather—abnormally dry. Prospects are fair so far, but much more rain is wanted, especially in the west of the Jehanabad sub-division. Public health continues good.
PRESIDENCY DIV.	6 Midnapore „ 23, '87	5.02	Weather—seasonable. Prospects of <i>aus</i> , jute and sugarcane promising. Transplantation of <i>amun</i> in progress.
	7 Hooghly „ 23, '87	1.51	Report not received.
	8 Serampur „ 23, '87	2.52	Weather—less rain and cloud than usual at this season. All crops promise well. Indigo manufacture going on; outturn fair. More rain wanted for <i>aus</i> rice on high land and for transplanting <i>amun</i> . Public health good.
	9 Jehanabad „ 23, '87	0.24	Weather—cloudy and sultry with some showers. <i>Aus</i> paddy doing well, but <i>amun</i> seedlings have suffered much in places from want of sufficient rain. Public health good.
	10 Howrah „ 23, '87	4.30	Weather—hot. Prospects of paddy crops continue good. More rain wanted for transplantation of <i>amun</i> paddy. General health good.
RAJSHAHY DIV.	11 Oolooberiah „ 23, '87	6.98	Weather—very hot. Rain at intervals. Transplanting of <i>amun</i> going on. <i>Ata</i> , sugarcane and jute progressing. Public health good.
	12 24-Pergha, „ 23, '87	1.82	Weather—clear and hot. Present prospects fair. Rain is wanted. Rice selling at from 16 to 25 seers per rupee.
	13 Nudda „ 23, '87	0.48	Weather—cloudy. Harvesting of <i>Ata</i> completed with outturn of half average crop. Paddy and jute, where not injured by floods, generally doing well. Land is being prepared for ganja cultivation. Public health fair.
	14 Kushtia „ 23, '87	1.98	Weather—unusually hot. Crops generally good. Rain wanted for planting out <i>amun</i> seedlings. Public health fair.
	15 Chuadanga „ 23, '87	1.33	Weather—seasonable. State and prospects of crops uninjured by floods are good. Public health fair.
RAJSHAHY DIV.	16 Ranaghat „ 23, '87	2.69	Weather—seasonable. Prospects of crops good. Rivers have risen. General health good.
	17 Jessore „ 23, '87	1.45	Weather—several bright days. State and prospects of crops good. The break in the rains continues. Intense heat on several days during the week. The break has done no damage as yet owing to some good showers having fallen, and early rice is slightly improved by the dry weather. Jute also shows slight improvement in places. Transplantation of late rice somewhat retarded in high lands.
	18 Jhenidah „ 23, '87	1.09	Weather—seasonable. Jute is being harvested. <i>Amun</i> and <i>aus</i> paddy thriving. Rivers rising gradually. Public health good.
	19 Magurah „ 23, '87	1.10	Weather—seasonable. Crops doing well. Public health good.
	20 Narail „ 23, '87	0.92	Weather—hot and rainy. Cultivation of <i>amun</i> is still going on. General health good.
RAJSHAHY DIV.	21 Bongong „ 23, '87	0.35	Weather—hot. State and prospects of crops good.
	22 Moorshedabad „ 23, '87	1.63	Weather—hot. State and prospects of crops good.
	23 Lalbagh „ 23, '87	2.10	Weather—hot. State and prospects of crops good.
	24 Kandi „ 23, '87	0.20	Weather—hot. State and prospects of crops good.
	25 Jungipur „ 23, '87	0.55	Weather—hot. State and prospects of crops good.
Eastern Districts.			
RAJSHAHY DIV.	26 Dinagenore „ 23, '87	2.06	Weather—seasonable. Jute is being harvested. <i>Amun</i> and <i>aus</i> paddy thriving. Rivers rising gradually. Public health good.
	27 Thakurgaon „ 23, '87	0.98	Weather—seasonable. Crops doing well. Public health good.
	28 Rajshahy „ 23, '87	1.46	Weather—seasonable. Crops doing well. Public health good.
	29 Nattore „ 23, '87	1.5	Weather—seasonable. Crops doing well. Public health good.
	30 Nowgong „ 23, '87	0.80	Weather—seasonable. Crops doing well. Public health good.
RAJSHAHY DIV.	31 Rungpore „ 23, '87	1.91	Weather—seasonable. Crops doing well. Public health good.
	32 Kurigram „ 23, '87	0.75	Weather—seasonable. Crops doing well. Public health good.
	33 Nilphamari „ 23, '87	1.81	Weather—seasonable. Crops doing well. Public health good.
	34 Bogra „ 23, '87	2.18	Weather—seasonable. Crops doing well. Public health good.
	35 Sherpur „ 23, '87	0.56	Weather—seasonable. Crops doing well. Public health good.
RAJSHAHY DIV.	36 Nowkhilla „ 23, '87	3.89	Weather—seasonable. Crops doing well. Public health good.
	37 Pubna „ 23, '87	0.66	Weather—seasonable. Crops doing well. Public health good.
	38 Farajgunge „ 23, '87	0.17	Weather—seasonable. Crops doing well. Public health good.
	39 Darjeeling „ 23, '87	1.75	Weather—seasonable. Crops doing well. Public health good.
	40 Julpigore „ 23, '87	2.26	Weather—seasonable. Crops doing well. Public health good.
RAJSHAHY DIV.			
RAJSHAHY DIV.	41 Dacca, July 23, '87	6.83	Weather—seasonable. Jute is being harvested. <i>Amun</i> and <i>aus</i> paddy thriving. Rivers rising gradually. Public health good.
	42 Manickgunge „ 23, '87	2.89	Weather—seasonable. Crops doing well. Public health good.
	43 Munshigunge „ 23, '87	1.96	Weather—seasonable. Crops doing well. Public health good.
	44 Naraingunge „ 23, '87	3.27	Weather—seasonable. Crops doing well. Public health good.
	45 Furreednore „ 23, '87	0.92	Weather—seasonable. Crops doing well. Public health good.
RAJSHAHY DIV.	46 Goalundo „ 23, '87	0.41	Weather—seasonable. Crops doing well. Public health good.
	47 Madaripore „ 23, '87	1.73	Weather—seasonable. Crops doing well. Public health good.
	48 Hackergunge „ 23, '87	2.49	Weather—seasonable. Crops doing well. Public health good.
	49 Mymensingh „ 23, '87	1.90	Weather—seasonable. Crops doing well. Public health good.
	50 Jamalpur „ 23, '87	0.70	Weather—seasonable. Crops doing well. Public health good.
RAJSHAHY DIV.	51 Kishoregunge „ 23, '87	2.29	Weather—seasonable. Crops doing well. Public health good.
	52 Attea „ 23, '87	Nil	Weather—seasonable. Crops doing well. Public health good.
	53 Netrokona „ 23, '87	1.18	Weather—seasonable. Crops doing well. Public health good.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong, July 26, '87	2.02	Weather—variable. <i>Aus</i> being harvested and <i>amun</i> transplanted. Prices stationary. Fever and cholera still reported, but general health good.
	23 Noakhally „ 22, „	3.80	Weather—unseasonable. Rains rare. Reaping of <i>aus</i> continues. Prospects fair. Transplantation of <i>amun</i> will shortly commence. Rain much wanted.
	Fenny „ „	1.40	Fever prevailing here and there.
	24 Tipperah July 21, '87	0.98	Weather—not quite so much rain as is customary at this time of the year. A superb <i>aus</i> crop is being reaped. Jute harvest will also be an excellent one.
	Chandpur „ „	2.50	A great deal more rain is wanted for <i>amun</i> ; but there is plenty of time yet. Inundation in the north is subsiding slowly, without having caused any injury.
CHITTAGONG DIV.	25 Chittagong Hill „ 19, '87	1.93	Weather—cloudy and sunny throughout the week with occasional showers of rain. <i>Joom</i> paddy doing well. Paddy being transplanted in low lands in small quantities. More rain wanted.
	Tracts. „ „		
	Bill Tipperah „ 20, „	0.97	Weather—hot. <i>Aus</i> paddy getting ripe. <i>Amun</i> paddy being transplanted. Sugarcane and <i>joom</i> crops doing well. Public health good.
BEHAR.			
PATNA DIV.	26 Patna, July 23, '87	Nil	Weather—hot and sultry. Rain wanted for transplantation of paddy. <i>Bhadai</i> crops growing well. <i>Cheena</i> on dearah lands is being reaped. Cholera reported from the interior.
	27 Gya „ 23 „	4.85	Weather—hot. <i>Marua</i> and <i>makai</i> coming on well. Paddy being transplanted. Cholera, fever and small-pox reported.
	28 Shahabad „ 23 „	0.11	Weather—hot and occasionally cloudy with local showers. Transplantation of rice is retarded owing to want of rain. <i>Bhadai</i> crops and sugarcane generally doing well. Public health not so good: cholera prevails throughout the district. Prices stationary.
	Buxar „ „	0.26	
	Sasaram „ „	0.43	
	Blahush „ „	1.90	
	29 Darbhanga „ 23 „	0.41	Weather—occasionally cloudy. <i>Bhadai</i> sowings are in progress. Paddy is being transplanted. Prices remain unchanged. Cholera abating.
	30 Mozufferpore „ 23, '87	Nil	Weather—mostly rainless with strong sun and great heat. The break in the rains has been generally advantageous. Crops in good condition. Transplantation of rice still going on.
	Hajipur „ „	0.11	
	Sitamarhi „ „	0.05	
BHAGULPORE DIV.	31 Saran „ 23 „	0.08	Weather—hot and close. Rain wanted again. Cholera still prevailing in the interior and town.
	Sewan „ „	0.15	
	32 Champaran „ 23 „	1.11	Weather—very hot; often cloudy. Weeding of <i>bhadai</i> crops going on. Transplantation of paddy progressing, but not rapidly for want of rain. Public health fair.
	33 Monghyr, July 23, '87	Nil	Weather—very hot and bright. Prospects of crops continue favourable, but rain much wanted now for <i>bhadai</i> crops and transplanting of winter rice.
	Begusarai „ „	0.74	Cholera still prevailing in places.
	Janui „ „	0.07	
	34 Bhagulpore „ 23 „	1.12	Weather—hot and close. Prospects of <i>bhadai</i> crops fair, and weeding is in progress. More rain is wanted for transplantation of winter rice and <i>marua</i> , but otherwise prospects are good. Cholera still lingers.
	Mudchpura „ „	0.38	
	Banka „ „	0.46	
	35 Purneah „ 23 „	0.53	Weather—hot; rain much needed. Crops suffering and transplanting delayed for want of rain.
BHAGULPORE DIV.	Kishengunge „ „	0.50	
	Arrareah „ „	2.80	
	36 Maldah „ 23 „	0.08	Weather—sultry, and generally rather dry for the season. <i>Bhadai</i> crops are doing well, and are in ear in most places; but in the north some damage has been done by early floods. Transplanting of winter paddy going on.
	Chunchal „ „	0.40	Common rice 20 seers per rupee. Public health generally good.
	Shibgunge „ „	0.45	
	37 Sonthal Pergah „ 23 „	1.13	Weather—hot and cloudy with slight showers. Rain wanted except in Pakour. It seems to be coming. Some cholera in Godda.
	Deoghur „ „	0.49	
	Godda „ „	0.70	
	Pakour „ „	2.87	
	Rajmehal „ „	0.87	
ORISSA.			
URISSA DIV.	38 Cuttack, July 22 '87	3.29	Weather—hot and cloudy. <i>Beali</i> rice is being weeded and <i>sarad</i> reploughed. Heavy shower of rain yesterday (21st), beneficial to rice crop. Price of rice remains stationary. Cholera somewhat violent in Cuttack town and at Banki. Sporadic cases reported from all sides.
	39 Poonch „ 21 „	1.34	Weather—hot and cloudy. Several breaches have been made in the embankment of the river Bharguni by a flood, and considerable damage is apprehended to the <i>sarad</i> sowings in pergunnah Rahang; elsewhere prospects are fair. Common rice 23 seers 2 chittacks per rupee in the Sudder sub-division and 22 seers 5 chittacks in the Khoorda sub-division. Cases of cholera reported from most parts of the district.
	Khoorda „ „	2.11	
	40 Balasore July 22, „	3.04	Weather—cloudy and seasonable. Weeding and transplanting of rice going on, but more rain wanted in the Bhudruk sub-division. A few cases of cholera reported; otherwise public health fair.
CHOTA NAGPORE.			
<i>South-West Frontier Agency</i>			
	41 Hazaribagh, July 22, '87	2.46	Heavy rain since the 19th. Transplanting of rice progressing. All <i>bhadai</i> crops and sugarcane doing well. Cases of cholera continue to be reported from several thannas; otherwise public health good.
	42 Lohardugga „ 23 „	1.05	Weather—hot and cloudy. Slight rain during the week; more wanted. Prices as before. Cholera appears to be increasing in the sub-division; otherwise general health good.
	Palamow „ „	0.80	
	43 Singbroom „ 22 „	0.30	Another break in the rains. Weather cool. More rain required both at headquarters and in the district generally. Prospects good. Public health good.
	44 Machhous „ 23 „	1.32	Weather—seasonable. Paddy is being transplanted. <i>Bhadai</i> crops doing well. More rain wanted in the west of the district. Public health good.
	Govindpur „ „	1.76

Observations.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the readings during the same period for the past years. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number of the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional stations for the period in question during the past season in the district ending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch falls.

* Mean for 5 days.

for the week ending Friday, the 22nd of July 1887.

Explanation.— indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 26th July 1887.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 22ND OF JULY 1887.

At the close of the previous week a small cyclonic storm, which had passed through South Bengal between Calcutta and Saugor Island, had moved away through the Central Provinces and Central India, and on the morning of the 15th, that is the last day of the previous week, it was near Hoshungabad. On the morning of the 16th the small storm had reached Hyderabad in Sind, and was disappearing across the Indus, while on the 17th it had disappeared over Beluchistan. The storm which appeared in South Bengal on the 12th had therefore a life history of from five to six days, and it travelled over a distance of from 1,500 to 1,600 miles quite unbroken; the direction of its movement was a little to the north of west. The indraught towards this storm had ceased to affect Bengal at the close of the previous week, and the most noticeable feature in the weather on the first day of the present week was the setting in of a westerly wind current over the greater part of the province, which drove back the easterly and south-easterly wind current which had previously been blowing. A slight area of comparatively low pressure was also developed on this day over the eastern part of South Behar. Conditions on this day were not favourable for heavy rain, and only light and local falls were reported over the greater part of the province. On Sunday, the 17th, the weather conditions over Bengal became extremely abnormal in the fact that at practically all stations in the province wind was north-westerly. This was apparently brought about by the unusual strength of the westerly Bombay current, which entirely drove back the very feeble monsoon current which was blowing from the Bay of Bengal, and thus practically at all stations from Buzar down to Negapatam winds became westerly and north-westerly. Under these circumstances, a short break in the rains became established, and on this day practically the whole province became rainless. Such abnormal conditions as these however, could not continue long, and on the Monday the Bay of Bengal current commenced to strengthen slightly, and in South Bengal there were distinct indications of interaction between the two opposing wind currents, which gave rise to somewhat numerous and heavy local showers, but it was evident that the southerly winds would gradually drive back the abnormal north-westerly winds. On Monday, the 19th, the advancing southerly current had made further progress, and at all, except a few stations in the west of Behar and Chutia Nagpur, winds had become southerly and south-easterly. The amount of interaction became larger, and in North Bengal heavy rain fell, but elsewhere rainfall was light and local. At the same time on this day a rapid fall of pressure took place in the north-west angle of the Bay, the fall at False Point being 0.127". A distinct, but feeble barometric depression was thus formed, the centre of which was to the south-east of False Point, and which was accompanied by a feeble cyclonic circulation of winds. This small depression has been the principal feature in the meteorology of the remainder of the week, and it has continued to exist without intensifying to any material extent, and without any movement beyond a slight shifting of the centre from day to day. On Wednesday, the 20th, the centre of the depression was apparently to the south of Saugor Island; on the 21st, the centre of the wind circulation was between Saugor Island and Balasore; and on Friday, the 22nd, the centre of the wind circulation was between Balasore and False Point. In the rear of the depression a strong monsoon current has been blowing, but the current has been deflected by the existence of this depression, and the monsoon winds have thus to a great extent been prevented from flowing over Bengal, and thus, during the existence of this depression, rainfall has been to a great extent absent from the greater part of Bengal, except the area immediately affected by the small storm.

Pressure—Which was at the close of the previous week rather largely above the normal, the average excess being rather more than a tenth of an inch, has fallen almost steadily during the first five days of the present week, though on the last two days pressure again commenced to rise. At the close of the week pressure was almost normal over a considerable part of the province, while it was below the normal at the stations affected by the depression, and above it at many of the stations in the north and west of the province. The mean pressure for the week has therefore been above the normal in all districts, the excess varying for 0.075" at Hazaribagh to one of 0.008" at False Point.

Temperature—Owing to the general deficiency of rainfall, has been somewhat above the normal in all districts; the general excess is, however, small, and is considerably less than a degree.

Rainfall—Has been largely below the normal in all districts except Orissa and South-West Bengal, which have been to a certain extent under the influence of the depression above described. In Orissa the fall is slightly in excess of the average amount, while in South-West Bengal, the rainfall is only slightly below the normal for the week. Thus in South-West Bengal an average fall of 2.10 inches has been received, the normal fall being 2.40 inches; in Orissa the average fall has been 2.90 inches and the normal is 2.74 inches, so that both these districts have received good falls of rain. In East Bengal the average fall has been 2.02 inches, against a normal of 3.45 inches, and this district has thus received little more than half the usual fall. In North Bengal the actual fall has averaged 1.32 inches against 3.08 inches, and in Chutia Nagpur 1.30 inches against the normal 2.85 inches, so that both these districts have received little more than a third to one-half of the

usual amount, while in Behar only about six to seven tenths have been received against a normal fall of about two and a half inches, so that the actual fall is only about a quarter of the normal.

In Assam the falls during the week have also been small :—Silchar has received 2·35 inches, Sibsagar 1·56 inches, and Dhubri 0·31 inch only.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 22nd of July 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal Average.	Average.	Normal average.

	23rd	83·1	90·8	12·0	78·8	80·3	·998	79·2	88	0·86

The mean temperature of the seven days ... 82·7
The extreme variation of temperature ... 16·2
The maximum temperature ... 98·0
The mean relative humidity ... 89
Inch.

The total fall of rain from 17th to 23rd July 1887 ... 4·08

The mean temperature and humidity are obtained by applying to the mean of the 10a, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;

The 25th July 1887.

JOHN ELIOT,

Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE returns from the principal Municipalities in Bengal presented, during the week ending 9th July 1887, the following results:—

1. That the birth-rate in these Municipalities amounted to 16·9 per 1,000 of population against 20 per 1,000 in the preceding week ending 2nd July, showing a considerable diminution in the registration of the events, and the death-rate to 24·5 per 1,000 against, very nearly the same proportion, viz. 24·8 per 1,000.

2. That the following Municipalities returned the highest proportions of births and deaths:—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Arrah	59·8	Puri	71·3
Comillah	53·9	Arrah	63·4
Durbhanga	29·9	Gya	50·7
Bhagulpore	29·0	Comillah	34·6
				Purneah	31·1
				Midnapore	31·0

3. That in comparison with the results of the preceding week, there was a sensible reduction in the death-rate from fever, while the fatal results from the other diseases exhibited only fractional differences:—

				Ratio per mille during the weeks ending—	
				9th July 1887.	2nd July 1887.
Cholera	5·7	5·5
Small-pox	·03	·2
Fever	7·5	8·6
Bowel-complaints	3·3	2·9
Injury	·6	·5
Other cause	7·3	7·1

4. That the undermentioned Municipalities suffered pre-eminently from cholera fever and the maladies classed under the head of "Other causes," the rest of the diseases manifesting no noticeable local exacerbation:—

<i>Cholera.</i>			<i>Fever.</i>		<i>Other causes.</i>	
		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	...	56·6	Beaneah	23·6	Gya	26·0
Arrah	...	21·5	Comillah	23·1	Bhagulpore	15·4
Midnapore	...	18·6	Arrah	22·7		
Gya	...	12·3				
Suburbs of Calcutta	...	6·2				
Chupra	...	5·8				
Durbhanga	...	5·5				
Patna	...	5·2				
Mozufferpore	...	4·9				

That under the heads of *Sex*, *Class* and *Age*, the mortality stood as follows:—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	25·7	Christians	4·3	Under 1 year	202·4
Females	23·1	Hindus	26·5	1 and under 5 years	46·0
Ratio of male deaths to every 100 female deaths	126	Mahomedans	20·6	5 " " 10 "	17·1
		Other classes	36·4	10 " " 15 "	14·0
				15 " " 20 "	21·4
				20 " " 30 "	11·3
				30 " " 40 "	13·4
				40 " " 50 "	20·8
				50 " " 60 "	24·0
				60 years and upwards	43·3

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

No. 2220R C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

GENERAL—ROAD CESS.

Dated Calcutta, the 23rd July 1887.

READ—

Letter from the Accountant-General, Bengal, No. 384L.F., dated the 16th July 1887, submitting an abstract of the receipts and expenditure of the several District Road Committees in Bengal for the quarter ending the 31st March 1887.

RESOLUTION.

The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the second quarter of the cess year 1886-87 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to all Commissioners of Divisions, to all Superintending Engineers of Public Works Circles in Bengal, and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal,

P. W. Dept.

BENGAL—contd.			
CHITTAGONG DIV.	<i>Eastern Districts—contd.</i>		
	22 Chittagong, Aug. 2, '87	10.72	Weather—seasonable. <i>Amra</i> transplanted. Prices steady. General health good, notwithstanding a few sporadic cases of cholera.
	23 Noakhali Fenny July 29, "	5.44 0.40	Weather—seasonable and generally rainy. Prospects of <i>amra</i> crop fair. Transplantation of <i>amra</i> progressing. This week's rain will do much good to the crops. More rain wanted.
	24 Tipperah Brahmanbariah " 28, '87	1.28 0.73	Weather—hot and sultry; much more rain is required for <i>amra</i> . Prospects good. <i>Amra</i> and jute being harvested with good outturn.
	25 Chandpur " " "	0.66	
	26 Chittagong Hill Tracts " 26, '87	4.85	Weather—cloudy and sunny throughout the week. <i>Joom</i> paddy doing well. Transplanting of plough-paddy continues. More rain wanted.
	Hill Tipperah " 27, "	1.22	Weather—hot. Reaping of <i>amra</i> paddy commenced. Transplantation of <i>amra</i> paddy continues. Prospects of <i>joom</i> crops fair. Public health good.
BEHAR.			
PATNA DIV.	26 Patna July 30, '87	2.76 0.30	Weather—hot. Transplantation of paddy is retarded for want of sufficient rain. <i>Bhadai</i> crops are thriving well. <i>Rabar</i> and <i>jowar</i> growing. Cholera reported from the interior.
	27 Gaya " 30 "	0.84	Weather—cloudy and rainy. Paddy transplantation going on. More rain wanted. Broadcast paddy being destroyed by grasshoppers. Cholera raging furiously almost everywhere. Fever also reported.
	28 Shahabad " 30 "	2.05	Weather—hot and close in the beginning of the week, but rainy in the latter part. Rain will benefit <i>bhadai</i> crops and sugarcane which are coming up well. More rain is wanted for transplanting of rice. Cholera prevails throughout the district, though somewhat abating. Prices stationary.
	29 Buxar " 30 "	1.53	Weather—sultry and occasionally cloudy. Rain is much wanted for transplantation of paddy. <i>Bhadai</i> crops are promising. Manufacture of indigo in progress. Prices remain stationary. Public health generally good.
	30 Sonepur " 30, '87	0.40 0.80 1.38 3.31 0.10	Weather—at first dry and hot; latterly rainy. Rain is said to be urgently needed, but recent showers must have been very beneficial. Crops look well. A good deal of cholera reported.
	31 Madhubani " 30, '87	1.22 0.24 0.71	Weather—sultry with east wind. Rain since yesterday (29th). More rain wanted for crops. Cholera prevailing all over the district in villages in the interior. Health of the town comparatively better for this season of the year.
	32 Hajipur " 30 "	2.04 0.18	Weather—variable, being sunny and cloudy alternately. <i>Bhadai</i> crops being cleared. Transplantation of paddy on high land retarded to some extent for want of sufficient rain. A heavy downpour is expected every day with often clouded sky. Public health not very good. Cholera still prevailing in the district.
	33 Sitamarhi " 30 "	Nil	
	34 Champaran " 30 "	0.83	Weather—hot and close with occasional showers. <i>Bhadai</i> crops doing well. More rain wanted for transplantation of winter rice. Cholera still lingers in places.
	35 Monghyr, July 30, '87	2.77 0.94 0.55 3.53	Weather—too dry early in week; now seasonable. Timely rain has started transplantation again. <i>Marwa</i> and early rice in good condition. <i>Makai</i> can scarcely be more than a half crop. Cholera still about.
SHAHDOLE DIV.	36 Begusarai " 30 "	0.86 0.26 0.08	Weather—hot and dry; raining from 29th. Complaints of drought very general. Rain now falling will probably stop further injury for the present.
	37 Kishengunge " 30 "	1.17	Weather—drier than usual till 29th, since which there has been moderate rain. Prospects of the <i>bhadai</i> crops generally fair except in the north, where the crops were partially damaged by early floods. Winter paddy is being transplanted and is doing fairly. There has been some apprehension owing to a break in the rains and to the rapid fall of the rivers, but moderate showers have since fallen. Common rice selling at 20 seers per rupee. Public health generally good.
	38 Arra " 30 "	0.26 0.08 1.69 0.80	Weather—cloudy and towards end of week rainy. Rainfall, though behind time, has done much good. Crops in Godda and Rajmehal suffer from want of rain. Prospects of Indian-corn middling. Cholera in north of district and in Sahabgunge.
	39 Chanchal " 30 "	1.69	
	40 Shibgunge " 30 "	0.80	
	41 Gajole " 30 "	4.01 1.43 0.12 3.21 3.22 1.71	Weather—sultry. <i>Sarad</i> and <i>beali</i> rice plants growing well. <i>Beali</i> in ear. Common rice 18½ seers per rupee in town and 22 to 25 seers in the interior. Cholera prevails in almost every part of the district, and somewhat violently in town. River rising.
	42 Southal Pergna " 30 "	7.38	Weather—seasonable. Transplantation of <i>sarad</i> plants in progress. <i>Beali</i> in ear. Rivers still rising. Common rice 23 seers 13 chittacks per rupee in Sudder sub-division and 21 seers 14 chittacks in Khoorda sub-division. Cases of cholera reported from most parts of the district.
	43 Deoghur " 30 "	4.07	Weather—cloudy and rainy. Agricultural operations going on vigorously. Prospects of crops favourable. A few sporadic cases of cholera reported. Public health otherwise good.
	44 Godda " 30 "	4.95	Heavy rain at head-quarters. Want of rain reported from some thanas. Agricultural prospects generally favourable. All crops doing well, but in some places rain wanted. General health fair, but cases of cholera continue to be reported from several thanas.
	45 Jamtara " 30 "	4.5 1.5	Weather—seasonable. Prospects of crops good. Transplanting of rice going on almost throughout the district. Prices steady. Cholera still prevails. Public health otherwise good.
ORISSA.	39 Khoorda " 28 "	7.38	Weather—cool. Timely rain has been most useful. Agricultural operations in active progress. Good reports from all parts. Health good in general. Cholera in Samsikela.
	40 Balasore July 29, "	4.07	Weather—cool and seasonable. Transplanting in progress. More rain wanted in north and west of district. Prospects of <i>bhadai</i> crops everywhere excellent. Price of rice rising. Public health good.

Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the readings during the same period for the past ten years. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number of rainy days in the district during the period is determined from the returns sent in by the sub-divisional stations for the period in question during the past ten years. A rainy day is one on which at least hundredth of an inch of rain has fallen.

for the week ending Friday, the 29th of July 1887.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 29TH OF JULY 1887.

At the close of the previous week a small barometric depression, accompanied by cyclonic circulation of winds, was situated in the north-west angle of the Bay. This small depression, which had formed on the 19th, had remained almost stationary for some days, except for a slight shifting of the centre from day to day, and on the 22nd the centre of the wind circulation was between Balasore and False Point. On the 23rd pressure had fallen over the whole province, the fall being largest in the north-west angle of the Bay, and the small barometric depression which existed over this area decidedly intensified. The lowest pressure reported on this day was 29·513" at Balasore, and the centre of the depression appeared to be between this station and False Point. A very distinct cyclonic circulation of winds accompanied the very feeble storm, but wind velocities in connection with it were small. On Sunday, the 24th, pressure again fell generally over the province, the fall being very rapid in the north-west angle of the Bay, where at Saugor Island it amounted to 0·151". This was produced by the further intensification of the depression, the centre of which on this day was decidedly nearer to the land and to Saugor Island than it was on the previous day, and on this date the centre appeared to be almost equi-distant between Saugor Island and Balasore. Pressure at Saugor Island at 10 A.M. on the 24th was 29·391", and at Balasore 29·409". Winds again showed a very complete cyclonic circulation round the depression, and practically this circulation affected the wind directions at all the stations in the province. Wind velocities in the neighbourhood of the disturbance, however, continued moderate only, though undoubtedly the weather over the sea area at the head of the Bay was decidedly squally. On this day the depression appears to have commenced to move in a north-westerly direction, and at 10 A.M. of the 25th it was in the extreme west of South-West Bengal, and passing into the south of Chutia Nagpur. On the morning of the 26th it had travelled towards Jubbulpur and Sutna, where on the 27th it rapidly diminished in intensity, and on the morning of the 28th it had practically disappeared. This small storm had therefore a life history of about 8 days, of which for the first five it remained almost stationary, and it was only during the last 2 or 3 days of its existence that it moved in a north-westerly or west-north-westerly direction, gradually decreasing in intensity in its progress over the land.

During the whole period of the existence of the feeble storm, the winds blowing in connection with it were very light. There was, however, the usual indraught towards the storm, and thus the rainfall bearing current was deflected towards the depression, and the greater part of the province received only local showers during the existence of the storm at the head of the Bay, though the area in immediate proximity to the storm received more general and heavier rain. Directly, however, the feeble storm had passed inland, the monsoon current blowing from the Bay of Bengal commenced to increase in strength and to pass over the land, and on the 28th the wind velocity had strengthened at Saugor Island from 15 miles an hour on the 26th and 27th to 20 miles an hour on the 28th, while for the 24 hours ending 10 A.M. of the 29th the velocity had averaged 27 miles an hour. For the last two or three days of the week therefore the monsoon current blowing over the province was decidedly strong, and rainfall became general and in many cases heavy on the 27th, 28th and 29th. The weather conditions at the close of the week were in fact decidedly favourable for the continuance of rainfall in Bengal.

Pressure.—The distribution of pressure has again been largely modified by the existence and passage of the depression described above. Pressure has been decidedly below the normal at almost all the stations in the province, but the defect has of course been greatest at the stations affected by the depression. Thus taking into consideration only those stations from which observations have been received for a series of years, and at which therefore accurate average pressures have been obtained, the variations from the normal are from a defect of 0·069 inch at Calcutta and one of 0·059 inch at Saugor Island to one of 0·005 inch at Purneah and 0·007 inch at Sibsaigar.

Temperature.—The variations of temperature during the week have to a great extent been dependent on the distribution of the rainfall. For the week, the average temperature has been distinctly in excess of the normal, the excess being largest in Behar. In North Behar the mean temperature for the week has been 1·8° in excess of the normal, and in South Behar the excess has been 1·5°. In North and East Bengal and Orissa temperature has also been in excess of the normal, but by small amounts, while in Chutia Nagpur it has been normal and in South-West Bengal slightly below it. For the whole province, Assam excluded, the mean temperature for the week has been 0·6° in excess of the normal. In Assam temperature has also been in excess of the normal by 1·3°.

Rainfall.—The causes affecting the distribution of the rainfall have already been referred to under the meteorology of the week. Rainfall has consequently been fairly heavy in all districts except North Behar and North Bengal. Thus in East Bengal, Orissa and Chutia Nagpur the falls have averaged between three and four inches, and in South-West Bengal and South Behar between two and a half and three inches. In North Bengal an average fall of only two inches has been received, and in South Behar only a fall of an inch. The actual average falls for the week in each of the seven meteorological districts expressed as a

percentage of the normal falls for the period will be:—Orissa 103 per cent., South-West Bengal 93 per cent., East Bengal 93. per cent., North Bengal 74 per cent., North Behar 35 per cent., South Behar 70 per cent. and Chutia Nagpur 85 per cent. Or taking each of these divisions to have an equal value in the calculation, the rainfall of the province for the week has equalled 79 per cent. of the normal.

In Assam rainfall has also been decidedly light and rather deficient during the week : thus Dhubri has received only 0.69 inch, Silchar only 0.81 inch, and Sibsagar, which has received heavier rain, only 2.42 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 29th of July 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The average fall of the corresponding period for 24 years, S. G.'s Office ... 35.11
... 33.68

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew.

JOHN ELIOT,

Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA ;
Calcutta, the 1st August 1887.

MEMORANDUM.

THE principal results to be gathered from the mortuary statistics of the districts in Bengal for the month of February 1887, as exhibited in the table annexed to this memorandum, are the following :—

1. That the deaths of 101,811 persons were registered out of a population of 66,163,884 in these districts, or at the rate of 18·36 per 1,000 per annum, against 26·88 per 1,000 in the preceding month, and 17·04 per 1,000 in the corresponding month of 1886, indicating, as compared with the latter period, much improvement in the record of the deaths.

2. That the undermentioned districts returned the highest proportions of the events :—

<i>Districts.</i>	<i>Ratio per mille.</i>	<i>Districts.</i>	<i>Ratio per mille.</i>
Puri	31·32	Rajshahye	27·60
Jalpaiguri	30·48	Rungpore	27·36
Backergunge	30·00	Bogra	25·32
Dinajpur	28·92	Pubna	24·96

3. That, in comparison with the casualties of the corresponding month of the past year, the mortality from fever had increased to some extent, the death-rate from injury was stationary, and there were no marked differences in fatal results from the rest of the diseases, *vide* figures given below :—

	<i>Ratio per mille during—</i>	
	<i>February 1887.</i>	<i>February 1886.</i>
Cholera	·96	1·08
Small-pox	·06	·07
Fever	13·44	12·48
Bowel-complaints	·72	·60
Injury	·12	·12
Other causes	2·68	2·52

4. That while the following districts exhibited exceptional mortality from cholera and fever, the rest did not display any noticeable severity from the other diseases specified above, excepting Puri, where 20·76 per 1,000 of the population died from the maladies coming under the head of "Other causes" :—

<i>Cholera.</i>	<i>Ratio per mille.</i>	<i>Fever.</i>	<i>Ratio per mille.</i>
24-Pergunnahs	4·32	Jalpaiguri	28·68
Tipperah	4·32	Dinajpur	27·36
Backergunge	3·60	Rajshahye	26·28
Faridpore	3·12	Rungpore	25·20
Dacca	3·00	Pubna	23·52
Mymensing	2·88	Bogra	21·96
Balasore	2·64		
Khulna	2·52		
Serampore	2·28		

5. That under the heads of *Sex*, *Class* and *Age* the mortality of the month was distributed as follows :—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	<i>Ratio per mille.</i>		<i>Ratio per mille.</i>		<i>Ratio per mille.</i>
Males	20·16	Christians	15·48	Under 1 year	122·16
Females	16·68	Hindus	17·64	1 and under 5 years	17·28
Ratio of male deaths to every 100 female deaths	118	Mahomedans	20·28	5 " " 10 " "	7·92
		Budhists	12·12	10 " " 15 " "	7·44
		Other classes	14·64	15 " " 20 " "	11·04
				20 " " 30 " "	12·48
				30 " " 40 " "	14·76
				40 " " 50 " "	19·32
				50 " " 60 " "	20·04
				60 years and upwards	49·80

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 1st August 1887.

--	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--	------	--

MEMORANDUM.

THE chief incidents in connection with the vital statistics of the principal Municipalities in Bengal, for the week ending 16th July 1887, are the following:—

1. That births were registered in the above Municipalities at the rate of 16·5 per 1,000 of population as opposed to very nearly the same proportion, viz. 16·9 per 1,000, in the preceding week ending 9th July, and deaths at 28 against 24·5 per 1,000, showing a considerable improvement in the registration of the casualties.

2. That these events were returned in the highest proportions from the following Municipalities:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Comillah	?	...	61·6	Puri	86·9
Arrah	29·9	Gya	77·9
				Arrah	45·5
				Bhagulpore	34·4
				Suburbs of Calcutta	32·7
				Chupra	32·4
				Comillah	30·8
				Patna	28·2

3. That the specific diseases, as noted below, proved fatal at the rates exhibited opposite them:—

				Ratio per mille during the weeks ending—	
				16th July 1887.	9th July 1887.
Cholera	7·1	5·7
Small-pox	·2	·03
Fever	8·9	7·5
Bowel-complaints	3·3	3·3
Injury	·3	·6
Other causes	8·1	7·3

indicating, chiefly, that the mortality from cholera and fever was much higher during the week under notice than during the preceding week.

4. That the Municipalities noted below were reported to have returned the highest death-rates from cholera and the maladies coming under the head of "Other causes," the rest of the diseases (indicated in the foregoing table) exhibiting no special local severity:—

Cholera.				Other causes.			
			Ratio per mille.				Ratio per mille.
Puri	48·3	Gya	32·8
Arrah	26·3	Puri	16·8
Gya	22·5	Bhagulpore	12·7
Chupra	9·8	Serampore	11·8
Midnapore	9·3				
Patna	8·1				
Suburbs of Calcutta	6·8				
Bhagulpore	6·3				
Monghyr	6·4				
Mozufferpore	4·9				
Howrah	3·1				

5. That the death-rates in relation to Sex, Class and Age, stood as follows:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	28·4	Christians	...	8·7	Under 1 year	...	222·9
Females	...	27·6	Hindus	...	29·7	1 and under 5 years	...	57·6
Ratio of male deaths to every 100 female deaths	...	116	Mahomedans	...	24·9	5 " " 10 "	...	17·1
						10 " " 15 "	...	14·0
						15 " " 20 "	...	21·4
						20 " " 30 "	...	11·2
						30 " " 40 "	...	18·9
						40 " " 50 "	...	22·1
						50 " " 60 "	...	28·9
						60 years and upwards	...	49·7

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 1st August 1887.

INCREASE.

Tons.

Coal	255
This increase is due to less import during last month.	
Railway plant and rolling-stock	31
This increase is due to more materials carried during the month.	
Salt	34
This increase is due to greater demand in the intermediate stations.	
Silk, raw—	
(2) Indian	41
This increase is due to fair market at Calcutta.	
Tobacco	14
This increase is due to greater import.	

DECREASE.

Cotton, raw	16
This decrease is due to less import.	
Grains	59
This decrease is due to dull market.	
Oilseeds	36
This decrease is due to dull market.	

NALHATI, the 30th July 1887.

R. G. MOOKERJEE, Manager.

Comparative statement of the principal commodities carried over the Eastern Bengal State Railway during the month of April 1887.

INCREASES.

Betelnuts	231 tons.
From B. C. R. and B. C. F. stations principally.	...
Cotton, manufactured	208 tons.
Despatches to Upper Bengal.	...
Jute, unscrewed	404 tons.
This increase is trifling. It is due to an early season.	...
Grain and pulse	3,046 tons.
Good crops and a favourable market.	...
Kerosine oil	326 tons.
For consumption in Upper Bengal.	...
Railway materials	552 tons.
Completion of repairs and renewals generally.	...
Tobacco	421 tons.
From the Northern Bengal State Railway principally.	...
Timber	607 tons.
Despatches from Calcutta for building purposes.	...
Hay, straw, &c.	235 tons.
This traffic is from the southern section only.	...

DECREASES.

Coal and coke	1,384 tons.
Due to through coal from East Indian Railway.	...
Rice	3,106 tons.
Stagnation in market.	...
Seeds	1,022 tons.
Continued depression of trade in this staple.	...

CALCUTTA, the 27th July 1887.

RESOLUTION.

READ the following

* No. 64, (S. & C.), dated the 16th June 1887.

Despatch,* with enclosures, received from Her Majesty's Secretary of State for India, regarding the proposed Melbourne Centennial Exhibition of 1888:—

No. 64 (Stats. & Comce.), dated India Office, London, the 16th June 1887.

From—The RIGHT HONOURABLE VISCOUNT CROSS, G.C.B., Her Majesty's Secretary of State for India,

To—The Government of India.

I FORWARD herewith a copy of correspondence with the Colonial Office, relative to the proposed Melbourne Centennial Exhibition of 1888, for such action in the matter as you may deem advisable.

Dated Colonial Office, London, the 19th May 1887.

From—SIR R. H. MEADE, Under-Secretary of State for the Colonies,
To—The Under-Secretary of State for India.

I AM directed by the Secretary of State for the Colonies to transmit to you 50 copies, received from the Agent General for Victoria, of the Prospectus of the Melbourne Centennial Exhibition, 1888.

I am to request you will move Viscount Cross to take the necessary steps, as soon as practicable, to invite the representation of the Indian Government at this Exhibition.

Dated Colonial Office, London, the 21st May 1887.

From—SIR R. H. MEADE, Under-Secretary of State for the Colonies,
To—The Under-Secretary of State for India.

WITH reference to the letter from this Department of the 19th instant, I am directed by Secretary Sir H. Holland to acquaint you, for the information of Viscount Cross, that Her Majesty has decided to issue a Royal Commission for the Melbourne Centennial Exhibition, 1888. I am to suggest, for His Lordship's consideration, that in bringing the proposed Exhibition to the notice of the Indian Government, the appointment of the Commission should be mentioned.

Dated India Office, London, the 16th June 1887.

From—J. A. GODLEY, Esq., Under-Secretary of State for India,
To—The Under-Secretary of State for the Colonies.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letters of the 19th and 21st ultimo, forwarding 50 copies of the Prospectus of the proposed Melbourne Centennial Exhibition of 1888, for transmission to the Government of India, and informing Viscount Cross that a Royal Commission will be issued for the Exhibition, and I am to inform you in reply that a copy of your letters and enclosures has been forwarded to the Government of India for such action in the matter as they may deem advisable.

CENTENNIAL INTERNATIONAL EXHIBITION, MELBOURNE, 1888.

Commission By—His Excellency SIR HENRY BROUGHAM LOCH, Knight Commander of the Most Honourable Order of the Bath, Governor and Commander-in-Chief in and over the Colony of Victoria and its Dependencies, &c., &c., &c.

To—The, Honourable GEORGE HIGINBOTHAM, Chief Justice of the Colony of Victoria; the Honourable SIR JAMES MACBAIN, Knight, President of the Legislative Council of the said Colony; the Honourable PETER LALOR, Speaker of the Legislative Assembly of the said Colony; the Honourable SIR WILLIAM JOHN CLARKE, Baronet, M.L.C.; Colonel the Honourable FREDERICK THOMAS SARGOOD, C.M.G., M.L.C., President of the Melbourne Chamber of Commerce; the Honourable JAMES MUNRO, M.L.A.; the Honourable WILLIAM MOUNTFORD KINSEY VALE; JOSEPH BOSISTO, Esq., C.M.G., M.L.A.; ROBERT MURRAY SMITH, Esq., C.M.G.; WILLIAM CAIN, Esq., J.P., Mayor of the City of Melbourne; THOMAS HOULDEN THOMPSON, Esq., J.P., Mayor of the City of Ballarat; PATRICK HAYES, Esq., J.P., Mayor of the City of Sandhurst; LAMBTON L. MOUNT, Esq., President of the Victorian Chamber of Manufactures; WILLIAM TRENWITH, Esq., President of the Melbourne Trades Hall Council; JOHN BLYTH, Esq., J.P.; and HENRY BYRON MOORE, Esq.

GREETING:

Whereas it is deemed advisable to hold an International Exhibition of Works of Industry and Art at Melbourne, in the year of our Lord One thousand eight hundred and eighty-eight, in commemoration of the Centenary of the founding of the first Colony of Australia, to be called "The Centennial International Exhibition, Melbourne, 1888:" Know ye that by the power and authority vested in me by the Act numbered Four hundred and twenty-two, I, the Governor of the said Colony, with the advice of the Executive Council thereof, relying on your loyalty, integrity, learning, and ability, have constituted and appointed, and by these presents do constitute and appoint, you the said George Higinbotham, Sir James MacBain, Peter Lalor, Sir William John Clarke, Frederick Thomas Sargood, James Munro, William Mountford Kinsey Vale, Joseph Bosisto, Robert Murray Smith, William Cain, Thomas Houlden Thompson, Patrick Hayes, Lambton L. Mount, William Trenwith, John Blyth, and Henry Byron Moore, to be Commissioners to take measures for the holding of such International Exhibition, and to carry out and superintend such Exhibition; and for the erecting, altering, and maintaining of suitable grounds and buildings for the purposes of such Exhibition; you keeping the entire control and management thereof until otherwise determined, and for appointing and regulating the charges for admission to such buildings, premises, or grounds, or the rent or hire of any part thereof or otherwise, and the application of the proceeds towards the objects and the expenses of the said Exhibition; and for appointing the purposes of public enjoyment and entertainment for which such buildings, premises, and grounds, or any part thereof, may be used and applied; and for obtaining such exhibits as may, in your judgment, be necessary to illustrate the progress of industry and art elsewhere; and for securing the most effective display of all articles sent for public exhibition, their safe custody, their due return to their owners, or their disposal otherwise, as may be arranged; and for determining as to the nature, number, and value of the prizes to be awarded to the exhibitors and the impartial distribution thereof; and generally to do and execute all other matters and things whatsoever deemed necessary by you for the full accomplishment of the duties entrusted to you by this Commission: And further I do hereby, with the advice aforesaid, constitute and appoint you the said George Higinbotham to be President, and you the said Sir James MacBain, Peter Lalor, Sir William John Clarke, and Frederick Thomas Sargood, to be the Vice-Presidents of the Commission: And do further constitute and appoint you the said Commissioners to be also the Executive Commissioners for the said Exhibition: And for your assistance in the due execution of this Commission, I do hereby appoint George Theodore Adams Lavater, Esquire, to be Secretary to this Commission: And lastly, with the advice aforesaid, I do, by these presents, ordain that this Commission shall continue in full force and virtue until otherwise determined; and that you, the said Commissioners, or any five or more of you, shall and may from time to time, and at any place or places, proceed in the execution thereof, and of every matter and thing therein contained, although your proceedings may not be continued from time to time by adjournment.

Given under my Hand and the Seal of the Colony, at Melbourne, in the said Colony, this sixth day of January, in the year of our Lord One thousand eight hundred and eighty-seven, and in the fiftieth year of Her Majesty's reign.

HENRY B. LOCH.

By His Excellency's Command,

ALFRED DEAKIN,

Chief Secretary.

The Government of Victoria having determined to hold an Exhibition of Arts, Manufactures, Agricultural and Industrial Processes and Products of all nations during the year 1888, to celebrate the Centenary of the founding of New South Wales, the first Australian Colony, His Excellency Sir Henry Brougham Loch, Knight Commander of the Most Honourable Order of the Bath, Governor and Commander-in-Chief in and over the Colony of Victoria and its Dependencies, &c., &c., did, on the sixth day of January 1887, by and with advice of the Executive Council, issue under the Seal of the Colony of Victoria a Commission authorising measures to be taken for the holding of such Exhibition, and for the carrying out and superintending of the same.

In accordance with the powers vested in them by the aforesaid Commission, the Executive Commissioners have decided to open the

CENTENNIAL INTERNATIONAL EXHIBITION, MELBOURNE, 1888.

on the first day of August 1888, the said Exhibition to be kept open for six months, and closed on the thirty-first day of January 1889.

The Exhibition will be held in buildings which have been specially erected for Exhibition purposes, situated in the Carlton Gardens, in the City of Melbourne, and in such other buildings and grounds attached thereto as may be found to be required; and it is intended that the Exhibition shall be open in the evening as well as during the day.

Acting under the powers conferred upon them, the Commissioners desire to invite the British, Foreign, and Colonial Governments to take part in this Exhibition, and they trust that steps will be at once taken for the display of complete and thoroughly representative exhibits from every country and colony.

During the year 1885, Australasia, with a population of 3,500,000, imported from Great Britain goods to the amount of £32,000,000. The United States, France, and Germany, whose combined populations number 133,000,000, imported during the same period, from Great Britain to the amount of £53,000,000. Calculated at per head of the population, Australasia therefore imported nearly 23 times as much as the above-named countries combined, and this in addition to a large and increasing trade with other countries.

The mileage length of railways opened for traffic in the Australasian colonies amounts to 7,700 miles, and when the lines further authorized and now in course of construction are completed, they will reach a total length of 10,000 miles.

Already the capital cities of South Australia, New South Wales, and Victoria are connected by railway, the distance from Adelaide to Sydney, *via* Melbourne, being 1,100 miles. Between Sydney and Brisbane, the capital city of Queensland, a further distance of 710 miles, there remain only about 100 miles of railway to be constructed to connect the capitals of the four principal colonies, and as the construction of this portion is now being rapidly proceeded with, there will soon be uninterrupted communication between Adelaide, Melbourne, Sydney and Brisbane, a distance of 1,800 miles.

In view of the remarkable growth of Australasia in all things relating to population, production, and general distribution of wealth amongst all classes, the facilities for rapid, economical, and easy transit, and its many other advantages, the Commissioners confidently invite all desirous of extending their commercial relations with these rapidly-extending communities to exhibit the fullest and most complete representations of their Raw Products, Skilled Industries and Arts, at the Centennial International Exhibition, Melbourne, 1888.

APPLICATIONS FOR SPACE.

1. Governments intending to take part in this Exhibition are requested to forward an intimation to that effect not later than the 31st August 1887.

2. Applications for space, with full particulars, are invited as early as possible. Copies of the official form of entry can be obtained upon application to the Secretary to the Commissioners, through the representatives of the country or colony to which the applicants belong. In the event of no representatives being appointed by the country or colony to which an intending exhibitor belongs, he can communicate direct with the Secretary. Applications for space should be made not later than the 31st August 1887. Space assigned to countries and colonies, and not occupied on the 30th June 1888, will revert to the Executive Commissioners, and will be subject to re-arrangement. Space will not be charged for, but power will be reserved by the Executive Commissioners to reduce the space allotted to any Government or any exhibitor should they deem fit, at any time.

3. British, Foreign, and Colonial Governments, or Commissioners appointed by them, are requested to inform the Executive Commissioners, Melbourne, not later than the 31st December 1887, whether they require any increase or diminution of the space offered them, and the quantity. They are also requested to state whether there will be any exhibits for which special space should be provided, together with a description showing their nature and bulk.

4. Before the 31st May 1888, the representatives of countries or colonies should furnish for the approval of the Executive Commissioners, approximate plans, showing the manner in which they propose to allot the space assigned to them, together with lists of their exhibitors, and any other information necessary for the compilation of the official Catalogue. (*Vide* No. 13.)

SHIPMENT OF EXHIBITS.

5. Commissioners representing countries or colonies, and private exhibitors whose countries are not officially represented, but to whom space has been allotted, may adopt one of two courses, viz.—

- (a) They can ship their exhibits direct to Melbourne, and make their own arrangements for their shipment, reception, and exhibition ;
- (b) Or consign their exhibits, freight and expenses prepaid, to

The Secretary,

Centennial International Exhibition, 1888,

Melbourne, Australia,

with specific instructions as to what is desired. Where it is found necessary to incur expenses on exhibits consigned to the Secretary, such expenses will be a first charge on such exhibits.

MARKS AND ADDRESS ON PACKAGES.

6. Packages forwarded from countries and colonies represented at the Exhibition should be addressed

To the Commissioner for

Centennial International Exhibition, 1888,

Melbourne, Victoria :

Australia ;

and the following information must be written on the outside of each package:—(1) The country from which the package comes. (2) Name or firm of exhibitor. (3) Address of the exhibitor. (4) Group and class to which exhibits belong. (5) Total number of packages sent by same exhibitor. (6) Serial number of that particular package. Each package must contain list of contents.

Packages containing goods intended for the Exhibition must likewise have painted on them, as a distinctive mark, the following letters and figures within a triangle, thus—

Packages from foreign countries must also be marked with the colours and devices of their national flag. Foreign Commissioners are particularly requested to send to the Executive Commissioners, Melbourne, as soon as possible, a specification of the packages forwarded, with their distinguishing marks.

CUSTOMS DUTIES, ENTRIES, &c.

7. Exhibits will be admitted free of duty for the purpose of exhibition. Customs entries, transportation, receiving, unpacking, and arranging the products for exhibition must be undertaken by the exhibitor at his own expense.

TRANSPORT.

8. No charge will be made for carriage of goods intended for exhibition over the railway lines.

Arrangements will be made by which all goods intended for exhibition can be carted from the wharves, or the several railway stations, to the Exhibition Grounds at a fixed scale of charges.

REMOVAL OF GOODS.

9. The removal of goods, except under special circumstances, will not be permitted during the period the Exhibition is open. Delivery of exhibits sold will not be allowed until after the close of the Exhibition. Special permits for the sale and delivery of goods and articles manufactured in and during the progress of the exhibition may be given by the Executive Commissioners, should they deem fit.

PROTECTION TO INVENTORS AND OTHERS.

10. The protection of inventions capable of being patented, and of designs, is secured by the patent laws of Victoria. No work of art, nor any article whatever, exhibited in the buildings, parks, or gardens may be drawn, copied, or reproduced in any manner whatsoever, without the permission of the exhibitor. The Executive Commissioners reserve to themselves the right of authorizing the production of general views.

Sketches, drawings, photographs or other reproductions of articles exhibited* will only be allowed upon the consent of the exhibitor and the approval of the Executive Commissioners; but views of portions of the building may be taken upon the sanction of the Executive Commissioners alone.

GOODS REQUIRING SPECIAL WORK OR ACCOMMODATION.

11. The placing and fixing of heavy articles, requiring extra foundations or adjustment, should begin by special arrangement as soon as the progress of the work upon the Exhibition Buildings will permit. The general reception of articles in the Exhibition Buildings will commence on the 1st May 1888, and no articles will be admitted after the 15th July 1888. The plans for the display and accommodation of objects that require either special arrangements or exceptional works for their display must receive the approval of the Executive Commissioners before work is commenced, and all such works must be carried out under the supervision of their officers. The works of general fitting-up must be commenced not later than the 1st June 1888, and the Courts must be ready to receive goods before the 1st May 1888.

The Executive Commissioners, if they deem fit, will grant permission for the erection of approved special constructions in the buildings or grounds, at the cost of the exhibitor.

EXHIBITS NOT FOR COMPETITION.

12. If exhibits are not intended for competition, it must be so stated by the exhibitor, and they will be excluded from examination by the Jurors.

OFFICIAL CATALOGUE.

13. An Official Catalogue will be published in English by the Executive Commissioners, by whom the sale of Catalogues is reserved. Anything beyond the ordinary description of the exhibit, together with the name of the exhibitor, must be paid for at the rate of five shillings per line. Exhibitors desiring to utilize the Catalogue for advertising purposes should communicate as early as possible on the subject with the Secretary. Each country and colony will, however, have the right of producing at its own expense, but in its own language only, a special Catalogue of the objects exhibited in its section. Such Catalogue, however, must not be offered for sale in this Colony, or be used as a medium for advertising.

GROUPING EXHIBITS.

14. The representatives of countries and colonies will be allowed to group their exhibits as they may think fit in that portion of the Exhibition Buildings allotted to the country or colony which they represent. The Executive Commissioners desire, however, that, where International Courts can be formed, special classes of exhibitions of all nations, and of the same character, shall be exhibited together: Victorian exhibits will be grouped in classes, irrespective of districts.

15. Exhibits from any country or colony whose Government is not represented must be classified according to the following groups. The same direction will be followed in the Catalogue:—

1. Works of art.
2. Education and instruction—Apparatus and processes of the liberal arts.
3. Furniture and accessories.
4. Fictile manufactures, glass, pottery, &c.
5. Textile fabrics, clothing, and accessories.
6. Raw and manufactured processes and products.
7. Machinery—Apparatus and processes used in the mechanical industries.
8. Alimentary products.
9. Sanitation, medicine, hygiene and public relief.
10. Agriculture and associated industries.
11. Horticulture.
12. Mining industries—Machinery, processes, and products.

Any expenses incurred by the Executive Commissioners in the display and exhibition of these goods will be made a first charge upon such goods.

Each of these groups is divided into classes, according to the system of general classification annexed to these regulations, in an Appendix, which includes for each class an enumeration of the nature of the objects which it will comprise.

MOTIVE POWER FOR EXHIBITS.

16. Motive power will be supplied to suitable exhibits free on application to the Executive Commissioners, but the latter reserve to themselves the power to reduce the amount asked for, or to make a charge for a certain portion of the motive power supplied,

if they consider necessary. The Executive Commissioners desire to encourage the display of machinery in motion, and of all descriptions of manufactures, &c., in progress, and they will endeavour to provide adequate power to meet all reasonable demands. By the introduction of steam power, it is proposed to afford facilities for presenting not only the machinery for any given manufactures, but also the processes of manufacture. Requests for motive power must be made to the Executive Commissioners prior to 31st March 1888.

17. All shafting, pulleys, belting, connections, &c., for the transmission of power from the main shafting must be provided by, and at the cost of, the exhibitor.

18. It is further intended that space shall be afforded for the production of interesting objects by manual labour.

FITTINGS, &c.

19. Exhibitors must provide at their own cost all show-cases, shelving, counters, fittings, &c., which they may require.

RIGHT TO REJECT EXHIBITS.

20. The Executive Commissioners reserve the right of rejecting or returning any proposed exhibit. Articles that are in any way dangerous, or offensive or injurious to public decency and morality, will not be admitted into, or allowed to be exhibited in the Exhibition.

WORKS OF ART.

21. The following special regulations are framed for the reception and admission of works of art. The works admissible include the five classes mentioned below :—

1. Paintings.
2. Drawings, water-colours, crayon drawings, miniatures, enamels, porcelain, designs in glass and clay, designs for stained-glass windows, and mosaic work.
3. Sculpture and die-sinking, and engraving on precious stones.
4. Architectural and engineering drawings and models.
5. Engraving and lithography.

The following are excluded :—

1. Unframed pictures or drawings.
2. Sculpture in unbaked clay.

The duty of deciding upon the admission of works of art will devolve upon a special committee. Suitable space, which will be lighted by electricity, will be reserved for the exhibition of paintings. Other regulations will give information as to the despatch and reception of works of art.

FIRE, ACCIDENTS, &c.

22. The Executive Commissioners will take precautions for the safe preservation of all objects in the Exhibition, but will be in no way responsible for damage or loss of any kind, or accidents by fire or otherwise, however caused. In order, however, to reduce the danger of fire to a minimum, a special fire-brigade will be formed, and be available, in connection with the Exhibition, from the time of the reception of exhibits to its close.

INSURANCE, &c.

23. Facilities will be afforded the representatives of countries and colonies, and private exhibitors, for insuring their goods; and they may also employ watchmen, at their own expense, to guard their goods during the hours the Exhibition is open to the public. The appointment of such watchmen will be subject to the approval of the Executive Commissioners. These persons must wear a special dress or distinctive badge.

AWARDS.

24. The following is the system under which the awards will be made :—

The awards will be based upon written reports adopted by the Jurors.

The Jurors will be selected for their qualifications and character, and shall be experts in the departments to which they are especially assigned; the British, Foreign, and Colonial Jurors shall be nominated by the representatives of each country or colony exhibiting, and, if approved of, will be appointed by the Executive Commissioners who will appoint those for Victoria.

Jurors will be reimbursed such personal expenses as may be allowed by the Executive Commissioners.

The Jurors' reports and the Executive Commissioners' awards will be based upon the inherent and comparative merits of the individual exhibits, the elements of merit being held to include considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy, cost, and importance of interests involved.

Each report must be delivered to the Secretary to the Executive Commissioners as soon as completed.

Awards will consist of gold, silver, and bronze medals, and certificates of honourable mention, together with a special report of the Jurors on the subject of the award. A certificate will accompany each medal.

Each exhibitor shall have the right to produce and publish the report awarded to him, but the Executive Commissioners reserve the right to publish and dispose of all reports in any manner they may think best for public information.

25. Immediately after the close of the Exhibition, exhibitors or their duly-appointed agents shall remove their effects, and complete such removal by the 31st March 1889. Goods then remaining will be removed by the orders of the Executive Commissioners, and sold by auction, or otherwise disposed of under the direction of the Executive Commissioners, and the net proceeds handed to the exhibitors or their duly-appointed agents.

26. Every person who becomes an exhibitor thereby acknowledges and undertakes to observe the rules and regulations established from time to time for the government of the Exhibition.

27. The Executive Commissioners reserve the right to alter, explain, amend, or add to these regulations, at any time, whatever may be deemed necessary.

Information upon any question of details can be obtained upon application to

THE AGENT-GENERAL FOR VICTORIA,
8 Victoria Chambers,
Victoria Street,
Westminster,
London, S.W.:

or to

THE EXECUTIVE COMMISSIONERS,
Centennial International Exhibition, 1888,
Melbourne, Australia.

REGULATIONS

Concerning the Despatch, Reception, Arrangement, and Return of the Goods Exhibited, and Disposal of Space.

1. Every person admitted as an exhibitor will receive in Melbourne, and with the least possible delay, an exhibitor's ticket showing his rotation number and the dimensions of the space allotted to him.

He will receive at the same time printed labels to be affixed to the packages he may send to the Exhibition.

2. The labels supplied to exhibitors will be printed on paper of different colours, according to the group to which the products to be exhibited may belong.

The conventional colours adopted are as follows:—

Group 1.	(Works of art)	Pink.
„ 2.	(Education and instruction, apparatus and processes of the liberal arts)	White.
„ 3.	(Furniture and accessories)	Blue.
4.	(Fictile manufactures, glass, pottery, etc.)	Buff.
5.	(Textile fabrics, clothing and accessories)	Bright-yellow.
6.	(Raw and manufactured processes and products)	Brown.
7.	(Apparatus and processes used in the mechanical industries)	Red.
8.	(Alimentary products)	Violet.
9.	(Sanitation, medicine, hygiene, and public relief)	Black.
10.	(Agriculture and associated industries)	Dark-green.
11.	(Horticulture)	Light-green.
„ 12.	(Mining industries—Machinery, processes, and products)	Grey.

3. The Commissioners place at the disposal of countries and colonies all information and plans which may be useful for their arrangements.

4. Exchanges of space cannot be made without the consent of the Executive Commissioners.

5. Exhibitors will not have to pay rent for the space occupied by them in the Exhibition. The flooring will be provided in sound condition and ready for use within the whole of the main building; but the flooring must not be altered, removed, or strengthened, for the exhibition of machinery, convenience of arrangement, or any other purpose, except with the consent of the Executive Commissioners, and at the expense of the exhibitors.

6. The spaces reserved outside the exhibition allotments being strictly calculated with a view to the necessities of circulation, packages and empty cases will not be allowed to remain there.

Cases must, therefore, be unpacked as early as possible after their reception, and the empty cases at once taken away by the exhibitors or their agents.

Should the exhibitors neglect to carry out in the manner thus indicated the unpacking of the goods and the removal of the empty cases, the work will be undertaken by the Executive Commissioners, but in no case will the Commissioners incur any responsibility whatsoever in

the execution of this duty. The Commissioners will have nothing to do with the warehousing and preservation of the empty cases; neither have any arrangements been made, nor any space reserved, for the purpose. Exhibitors who may be unable to provide for the removal and preservation of their empty cases are advised to communicate with the Secretary.

GENERAL ARRANGEMENTS.

7. Certain products, which it may be found impossible to display in the main buildings, will, in some exceptional cases, be exhibited in the surrounding parks and gardens, in buildings erected for the purpose.

8. With regard to the Victorian section, the Commissioners will place themselves in communication with the Committees established in each locality. The duties of these Committees will be—

- (1) to make known the rules concerning the Exhibition, and to distribute the forms of application for space, as well as all other documents relating to the Exhibition;
- (2) to point out as soon as possible the principal artists, agriculturists, and manufacturers whose exhibits would appear to be particularly calculated to promote the success of the undertaking;
- (3) to encourage the exhibition of the manufactures, and of the mineral, pastoral, agricultural, and horticultural products of the district, and to accredit to the Commissioners the delegate charged with their representation.

9. Spirits or alcohol, oils and essences, corrosive substances and generally all substances which might spoil other articles or inconvenience the public, can only be received in solid and suitable vessels of small size.

Percussion caps, fireworks, chemical matches, and similar articles, can only be received when made in imitation, and deprived of all inflammable ingredients.

10. Exhibitors of objects of a disagreeable nature, or such as may be prejudicial to health, will be bound at all times to conform to such precautionary measures as may be considered necessary.

11. The Commissioners reserve the absolute right to cause the removal of any article whatever, if, on account of its nature or appearance, they deem it advisable to do so.

12. All goods must be exhibited under the name of the person who has signed the application for admission.

13. Exhibitors are entitled to insert after their name, or that of their firm, the names of their assistants of every class and grade who may have taken part in the production of the goods exhibited.

14. Exhibitors are particularly requested to mark the trade price of the articles exhibited, so as to facilitate the judgment of the Jury as well as for the information of visitors.

15. Persons desirous of exhibiting articles not mentioned in the General Classification may apply to the Executive Commissioners.

ADMINISTRATION.

16. A general supervision will be established for the prevention of robbery and embezzlement.

17. It must be distinctly understood that the Commissioners decline all responsibility for any theft or embezzlements which may be committed.

18. In the Victorian section, the exhibitors of each class must arrange among themselves as to the organization of a staff of attendants independent of the general supervision established by the Commissioners. Private agents of this description must be approved by the Commissioners, and must wear badges bearing the number of the class to which they will be attached.

19. All communications relating to the Exhibition must be addressed—

RULES FOR THE RECEIPT OF TESTIMONIALS AND ADDRESSES BY SERVANTS OF GOVERNMENT.

No. 29—1629-45, dated Simla, the 22nd July 1887.

RESOLUTION—By the Government of India, Home Department.

READ—

Home Department Resolution No. 19—746-62, dated 11th May 1885, prescribing rules for the receipt of testimonials and addresses by servants of Government.

In re-issuing the rules contained in Home Department Resolution of the 11th May 1885 with certain necessary additions, the Governor-General in Council desires to invite the renewed attention of Local Governments and Administrations to the subject with which they deal, and to impress on all concerned by them the duty of exact obedience to these regulations.

2. The rules do not apply to the receipt of addresses by the Head of any Government or Administration.

RULES.

1. Save as in these Rules otherwise provided, all servants of Government, covenanted or uncovenanted, are forbidden to receive complimentary or valedictory addresses in any form, or to accept testimonials of any kind, or to attend public meetings or complimentary entertainments of a formal and public character held in their honour.

2. The Government views with disfavour all similar manifestations in the case of retired officers, when following immediately upon their retirement from active service, and designed as an acknowledgment of acts done by them while in the service of Government.

3. It is not intended to prohibit such an expression of regard for the private or official character of an officer retiring from service, or leaving his station or district, as is involved in a farewell entertainment supported by his personal friends, even though some of these may be his official subordinates. But it is expected that the proceedings on such occasions will be substantially of a private and informal character.

4. Local Governments and Administrations are authorised to forward to an officer who has left a station or district the resolution of any local public body recording a vote of thanks to him for help and advice afforded during his official connection with the station or district.

5. Medical officers are not prohibited from receiving pecuniary recognition of their services from a community or body of persons which may desire to acknowledge these; but the previous sanction of the Local Government or Administration must be obtained by medical officers before receiving any public complimentary address.

6. Nothing in the above rules is meant to prohibit compliance with the request of a public body that a Government officer should sit for his portrait, bust or statue in recognition of his public services: provided that the portrait, bust or statue is not intended for presentation to the officer concerned.

7. The participation of Government officers in the raising of funds for the foundation of scholarships, or for procuring a portrait, bust or statue, as a spontaneous recognition of the services of a Government officer is not forbidden; but it should be clearly understood that any solicitation on the part of officers of Government for subscriptions from any person who does not voluntarily come forward to contribute is disapproved by the Government of India.

8. The previous sanction of the Government of India must be obtained to the relaxation of these rules in any special case in which the Local Government or Administration may think this desirable.

RESOLUTION.

THE subject of discussion in the papers cited in the preamble is the preparation and printing of annual departmental reports submitted to the Government of India in the Home Department. In a letter No. 392S., dated the 22nd June 1885, the Government of the Punjab solicited a reconsideration of the whole question of the preparation and treatment of annual reports, so far as that Province was concerned. The alterations suggested by Sir Charles Aitchison and the views provisionally held by the Government of India on the question are summarised in Home Department Resolution of the 12th August 1885. But as the subject was not one of merely local importance, the Governor-General in Council desired, before coming to a final decision, to have a full expression of the opinions of Local Governments and Administrations upon the proposals of the Punjab Government, so far as they affected the reports which are submitted to the Home Department. The replies from Local Governments and Administrations, read in the preamble, contain their opinions on the matter.

2. The proposals of the Punjab Government were made with the double object (1) of removing the burden thrown upon district officers, heads of departments, and Secretariat establishments in connection with the preparation and reviewing of annual reports; and (2) of reducing the cost of printing the reports. These proposals have not been accepted in full by any Local Government or Administration, except by the Chief Commissioner of Burma; and Mr. Crosthwaite, the present Chief Commissioner of that Province, holds, as his reply from the Central Provinces shows, different views from those held by Sir Charles Bernard. The Governments of Madras, Bombay, and Bengal have, to some extent, accepted the proposals in question, and the Chief Commissioner of Coorg has expressed his opinion generally in favour of having statistical tables, accompanied by notes, for two years, and in the third year a set of comprehensive departmental reports.

3. The most adverse criticism of the proposals made by the Punjab Government proceeds from the Government of the North-Western Provinces and Oudh, from the Administrations of the Central Provinces and of Assam, and from the Resident at Hyderabad. The Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh is of opinion that the presentation of evidence of departmental efficiency and the collection, in a convenient form, of information useful for administrative and other purposes, cannot be secured under a system of triennial reporting with intermediate statistical tables and brief explanatory notes. He considers that, as was suggested in paragraph 7 of Home Department Resolution of 12th August 1885, the brief notes would probably be of little practical value, while the triennial report would necessarily be prolix and involve much labour in its preparation. The latter, moreover, would be four years old

before the orders of Government could be passed or any subsequent action taken upon it. Sir A. Lyall observes that the labour of scrutinizing statistics is little augmented by that of writing a report on them, and that a careful scrutiny and comparison of past and present returns is a necessary part of the duty of the heads of departments in administering. But, while opposed to the general adoption of the proposals of the Punjab Government, Sir A. Lyall would meet them to some extent by doing away with reports on certain subjects and by substituting for them statistical tables accompanied every year by a brief commentary in the form of notes, such as is now supplied by the Local High Courts of judicature in reviewing the Criminal and Civil Justice returns.

4. Mr. Crosthwaite, at the time Chief Commissioner of the Central Provinces, concurs in the views of the Government of the North-Western Provinces and Oudh in regard to the small amount of labour required to write a report, when once the relevant statistics have been systematically studied. He remarks that the system of writing reports is useful, inasmuch as it ensures that statistics have been scrutinised, and that it enables the Government to see how much care and intelligence have been devoted to this scrutiny. Reports, moreover, in Mr. Crosthwaite's opinion, enable administrative officers to periodically survey the whole of their work and to judge of the effects of it, while they assist Government in seeing how far the recognised principles of administration have been applied and how far errors require to be corrected. If for annual reports triennial reports were substituted, there is, he thinks, likely to be the disadvantage that the officer who had done the work would not ordinarily write the report, or, if he did, that his recollection of the facts regarding which he was writing would have grown dim with time. Under such a system, too, errors of administration could not be corrected at once. Mr. Crosthwaite admits that reports and reviews are often unnecessarily prolix, and should be curtailed, and he suggests that the extended distribution of reports which at present prevails is unnecessary and expensive. He also deprecates the style of review which merely repeats, in other and perhaps fewer words, what is stated in the report.

The Officiating Chief Commissioner of Assam considers that the proposals of the Punjab Government are unsuitable to that Province, and would lead to serious practical inconvenience. Mr. Ward is of opinion that the value of reports to departmental officers would be lost by triennial reports, while the labour of compiling the latter would be very great, particularly to officers who had held their charges only for a small portion of the three years.

The Resident at Hyderabad doubts if the proposed reform would have an useful effect, and argues that the review of the year's transactions by the head of the Government affords an incentive to work. Praise or blame, in the Resident's opinion, loses its effect if it relates to a time long passed away. The officer concerned may have left the locality, and it does not always happen that an officer remains at his post for the whole three years for which he would have to write the report.

5. The opinions briefly summarized above confirm the view taken by the Government of India in the Home Department, as expressed in the Resolution of the 12th August 1885, that it was not possible to go as far as was proposed by the Punjab Government in the direction of curtailing the preparation and submission of annual reports. After giving the subject full consideration, the Government of India agrees in the main with the remarks made by the Government of the North-Western Provinces and Oudh and the present Chief Commissioner of Burma regarding the usefulness of annual reports as a means of testing departmental efficiency and the judgment and energy of officers, and also of checking and correcting administrative mistakes. Applying this principle, the Governor-General in Council is of opinion that annual reports must be maintained in the two following cases:—

- (a) Where the reports deal with the application of administrative principles still open to modification or the concrete working of which has to be watched.
- (b) Where the reports contain statistics which for administrative purposes must be compiled and examined annually.

These two heads comprise so many of the reports now falling under the cognizance of the Home Department that the conclusion to which His Excellency in Council has come is that, beyond insisting on brevity and methodical arrangement in the reports themselves, and on curtailment of reviews of them, it is impossible to afford much relief to Local Governments in the direction contemplated by this enquiry. The Government of India therefore desires that the reports dealt with in the Home Department should from 1887 onwards be treated in the following manner:—

- (i) To be submitted annually as heretofore—

Report on General Administration.
 „ Municipal Administration.
 „ Local Boards' Administration.
 „ Education.
 „ Sanitation.
 „ Civil and Criminal Justice.
 „ Jail Administration.
 „ Police Administration.
 „ Lunatic Asylums.

(ii) To be submitted in full every third year, statistical returns and brief commentaries in the shape of notes being submitted in the intermediate years—

Report on Registration.

„ Dispensaries.

„ Lock-hospitals.

„ Vaccination.

„ Destruction of wild beasts and snakes.

The notes to be submitted with the statistical returns in the years intermediate between the submission of the reports should give a clear, though brief, indication of the supervising or controlling officer's opinion as to the significance of the statistics.

6. The following special reports should continue to be submitted as before :—

Chemical Examiner's Report.

Report on Calcutta Medical Institutions.

Report of the Port Health Officer, Calcutta.

Report of the Commissioners of the Town of Calcutta.

Report on Publications under Act XXV of 1867.

The Review of Publications.

The Report on Vernacular Newspapers.

The Government of India leaves to Local Governments, who submit reports on Legal Affairs and Criminal Tribes, discretion to determine whether these reports shall be annually prepared as at present or prepared every third year, with brief notes in the intermediate years.

7. The Governor-General in Council would desire to express his earnest hope that Local Governments and Administrations will insist on curtailment of reports to the utmost extent which is consistent with a proper examination of the facts and figures presented in them. A reduction in the size of the reports on Jails, Police, Education, and Sanitation is especially necessary. In most provinces these reports have become far too discursive.

Compression of reviews is not less called for than curtailment of reports: a review should contain only what is necessary to communicate the judgment of the reviewing authority regarding the salient features of the report. The Governor-General in Council attaches no value to reviews which merely repeat in abridged form what is set forth in the report reviewed.

8. While thus recognising the need which exists for compression in the reports and reviews which reach the Government of India, His Excellency in Council is no less desirous that the same principles should be carefully followed as regards reports received by Local Governments and Administrations, but not forwarded to the Government of India. He fears that the time of administrative and executive officers is unnecessarily occupied as much by the preparation of reports and returns submitted for the information of the local authorities as by the preparation of those which reach the Government of India. He has therefore observed with satisfaction that the Government of Bengal has recently, in connection with the report of the Salaries Commission, directed its attention to this aspect of the case; and he trusts that all other Local Governments and Administrations will exercise a vigorous discretion not only in reducing the bulk of the reports and returns which are retained, but also in abolishing those that are not really required.

ORDER.—Ordered that a copy of this Resolution be forwarded to all Local Governments and Administrations for information and guidance; and that a copy be forwarded to the other Departments of the Government of India for information and further necessary action, and that it be published in the Supplement to the *Gazette of India*.

A. P. MACDONNELL,

Secretary to the Government of India.

RESOLUTION ON THE ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN FOR THE YEAR 1886-87.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 6th August 1887.

RESOLUTION.

READ—

The Annual Report of the Royal Botanic Garden, Calcutta, for the year 1886-87.

This being the report for the hundredth year, Dr. King has rightly taken the opportunity of giving a sketch of the history of the institution. The following extract contains an interesting account of the garden since its formation :—

The suggestion to form a Botanic Garden here was first made to the Government in Calcutta in June 1767, by Colonel Robert Kyd, then Superintendent of the Hon'ble Company's Dockyard at Kidderpore. The proposal was favourably entertained by the Governor-General, and its adoption was recommended to the Supreme Board in London during the same month, practical effect being given to it during the following year by the selection, as a site, of a large piece of land immediately below Colonel Kyd's private garden at Shalimar. This piece of land, besides the Botanic Garden as it is now limited, included about fifty acres, which form part of the grounds of the present Engineering College. Colonel Kyd was himself an ardent horticulturist, and he had brought together in his private garden at Shalimar a large collection of exotic plants, chiefly from the Straits. He was therefore very appropriately appointed the first Superintendent of the Botanic Garden which had been founded at his suggestion. Colonel Kyd continued to perform the duties of Superintendent until his death in 1793. On Colonel Kyd's death, Government decided to put the garden under the charge of a special officer who should have no other duty. Dr. William Roxburgh, the Company's Botanist in Madras, was therefore transferred from that Presidency, and was installed at Seebpore in November 1793. No better selection than that of Dr. Roxburgh could have been made. Dr. Roxburgh, for many years prior to his transfer, had been engaged in studying the then little known Flora of the Northern Circars in the Madras Presidency. He was a most ardent and enthusiastic botanist, and a good gardener. Dr. Roxburgh continued to be Superintendent until 1814, when he was obliged to proceed to the Cape on account of his health. From the Cape he went on to St. Helena, and from thence to England, where he died during the following year. Dr. Roxburgh was the first botanist who attempted to draw up a systematic account of the plants of India. During his busy life in this country he prepared a *Flora Indica*, which contained systematic descriptions of all the indigenous plants known to him, as well as of many exotics then in cultivation in the neighbourhood of Calcutta. The manuscript of this work he took with him when he left India, intending to publish it during his residence in England. His death prevented the execution of this plan; and, with the exception of the first volume, which was printed with some additions and interpolations by Drs. Wallich and Carey in 1820, the book remained unpublished until 1832. In the latter year it was printed, exactly as the author had left it, by the piety of his sons, Captains James and Bruce Roxburgh, neither of whom was a botanist. This book is the basis of all subsequent Indian botanical works. It is an admirable production, the descriptions are accurate and graphic, and its authorship justly entitles Roxburgh to his title of the Father of Indian Botany. Until the year 1872, when the publication of the "Flora of British India" was begun by the distinguished botanist Sir Joseph Hooker, Roxburgh's was the only single book through which a knowledge of Indian plants could be acquired. A second edition of this excellent manual was issued by Mr. C. B. Clarke in 1874 at a merely nominal price, Mr. Clarke's desire being to put the book within the reach of the poorest student. Besides the *Flora Indica*, Roxburgh published, at the expense of the Hon'ble Company, in three large folio volumes, his *Plantæ Coromandelianæ*, being descriptions with figures of three hundred of the most striking plants of the Coromandel Coast. Dr. Roxburgh was immediately succeeded in the Superintendentship of the Garden by Dr. Francis Buchanan (afterwards Hamilton), who at the time was on special duty in connection with an extended enquiry into the agriculture of India and in the collection of materials for a Gazetteer. Dr. Hamilton, who was an accomplished botanist and zoologist, collected a vast mass of material, part of which was published in his own name, but the bulk of which, after many years' suppression, was published under the title of Montgomery Martin's History, Topography and Statistics of Eastern India. Dr. Buchanan Hamilton held charge of the garden for only a short time, and he was succeeded in 1817 by Dr. Nathaniel Wallich, lately Surgeon to the Danish Settlement at Serampore. Dr. Wallich was an able and most energetic botanist, and during the earlier part of his term of office he organised collecting expeditions into the remote and then little known regions of Kumaon, Nepal, Silhet, Tenasserim, Penang, and Singapore. Dr. Wallich in fact undertook a botanical survey of a large part of the Indian Empire. The materials (in the shape of dried specimens of plants) thus accumulated were taken by Dr. Wallich to London, and, after being named there by himself and by other botanists, they were distributed in numbered collections to the leading botanical institutions in Europe. In this great distribution, Dr. Wallich included the collections of several other botanists which had been made over to him for the purpose. The

liberality with which these specimens was given away was so extreme that, in the garden report for the year 1843, we find Dr. Griffith (who had been appointed to officiate for Dr. Wallich during his absence in England) complaining that the herbarium had been completely denuded of every specimen collected during the first fifty years of the existence of the garden. Besides distributing these enormous collections, Dr. Wallich was enabled, through the munificence of the Hon'ble Company, to publish, under the title *Plantæ Asiaticæ Rariores*, three superb volumes illustrated by coloured figures of a high degree of excellence. Dr. Wallich retired in 1846 and died in 1854. During the lengthened absences of Dr. Wallich in Europe, his place at the garden was filled by Dr. W. Griffith, whose premature death deprived Botanical Science of one of its ablest and most industrious votaries. Dr. Griffith's extensive notes and numerous drawings were, after his death, published by Government in nine volumes. Dr. Wallich was succeeded by Dr. Hugh Falconer. Dr. Falconer was a Palæontologist, well known by his researches on the Sivalik Fossil Mammalia. In 1855 he left the country on account of ill-health, and was succeeded as Superintendent by Dr. Thomas Thomson, a traveller and botanist of much ability, the coadjutor of Sir Joseph Hooker in the collection and distribution of an extensive and well-known herbarium of East Indian plants, and the joint author of the first volume of a new *Flora Indica*. Dr. Thomson retired in 1861, and was succeeded by Dr. Thomas Anderson, whose untimely death in 1870 was caused by disease contracted during his efforts for the introduction of the quinine-yielding *Cinchonas* into the Sikkim Himalaya. For the two years subsequent to Dr. Anderson's departure from India, Mr. C. B. Clarke acted as Superintendent, and during his incumbency he began the series of botanical publications which has earned for him so high a scientific reputation.

2. From the first foundation of the garden, it was understood that it was to be made a source of botanical information for the possessions of the Company, and at the same time a centre to which exotic plants of economic interest could be imported for experimental cultivation, and from which, in turn, they could be issued for distribution in the Company's possessions. It was also intended to assist in introducing indigenous Indian products to new markets. It was intended that it should not only be a botanical, but also a horticultural and agricultural garden. The preceding paragraph shows how the botanical work laid out for the garden has been accomplished. But the economic side has by no means been neglected. At first great hopes were entertained that the spices which rendered the trade of the Company with the Moluccas and other of the Malayan Islands so valuable, might be cultivated in Bengal. The earliest efforts of Colonel Kyd were therefore directed to the introduction of the trees which yield nutmegs, cloves and cinnamon, and of the pepper vines. It was, however, speedily proved that the climate of Northern India is quite unsuited to these equatorial species. The equatorial fruits, such as mango-steen, langoat, dukko and bread-fruit, were also tried with a similar result; and so were the temperate fruits of Europe. In fact, no small part of the benefits conferred on the country by the garden in its early days was the demonstration by practical experiment that certain natural products, many of them of a most desirable kind, cannot be grown in Bengal; much money and bootless effort being thus saved to the country. The introduction of exotic timber trees also received early attention; and in the garden there still remain a few of the original mahogany trees introduced in these early years. The introduction of tea was one of the items put down in Colonel Kyd's original programme; and in the final establishment of what has now become one of the most important industries in Northern India, the garden bore a most important part. Potato-growing was introduced through its agency, and the cultivation of the quinine-yielding *Cinchonas* of the Andes was initiated and carried to a successful issue under the direction of Superintendents of this garden. In the improvement of Indian cotton, and in the introduction both of that and of jute to the markets of Europe, the garden authorities worked cordially hand in hand with the Agri-Horticultural Society of India, with what success it is unnecessary to point out. By the introduction of some of the best kinds of sugarcane from the West Indies, and the dissemination of these to all parts of the country, a considerable improvement was effected both on the quality and quantity of the sugar crop of the country. In this matter also the Agri-Horticultural Society worked hand in hand with the garden authorities. Very soon after the establishment of the Society just mentioned, a considerable piece of land in the garden was made over to it rent-free, and on this land the Society conducted the greater part of its operations for forty years. In fact, it was not until the year 1872 that the Society's garden was transferred to its present site in Alipore. It is unnecessary to discuss in detail the numerous experiments in the cultivation of economic plants which have been conducted in the garden since its beginning. A few of the products tried may simply be mentioned. Chief among these are flax, hemp, tobacco, henbane, vanilla, coffee (Arabian and Liberian), cocoa, ipecacuanha, aloes, sarsaparilla, jalap, india-rubber, cardamoms, tapioca, and coca. As regards horticulture, it may suffice to say that a large proportion of the kinds of exotic plants now found in private gardens in India has been introduced to the country through the agency of this garden, and that the improved methods of cultivation which now obtain were to a great extent initiated here.

3. In 1820 about fifty acres of land belonging to the garden were made over by Government to the Society for the Propagation of Christian Knowledge, and on this land the Society founded the institution so long known as Bishop's College, but since 1880 (owing to its retransfer to Government) as the Government Engineering College. In the year 1864 the garden was devastated by a cyclonic storm of extraordinary violence, which either uprooted or broke to pieces the majority of the trees in it, and, by blowing down all the plant-houses, hopelessly crushed their contents. The few trees which escaped on that occasion were sadly

reduced in number by a second cyclone which passed over the garden in 1867; and, at the present time, almost the only trees dating from before 1867 are the great banyan and a smaller tree of the same sort, some peepuls and country almonds, about twenty mahogany trees, and some palms. It is almost a pity that the occasion of its destruction by these cyclones was not taken to remove the garden to a site on the Calcutta side of the Hooghly. For, although there are certain advantages in the garden being so remote from the town, there can be little doubt that the balance is in favour of a site more easily accessible to the residents of Calcutta. The destruction of all shade, which resulted from the removal of the trees, allowed the inveterate weed known popularly as ooloo grass, and botanically as *Imperata cylindrica*, to take possession of the whole of the ground not occupied by roads or flower borders; so that when I took charge of the garden in 1871 it presented rather a sorry appearance. The liberality of the local Government, under whose control it soon thereafter passed, has made it possible for me to lay out the garden entirely anew. The whole of its area has since that date been treated for landscape effects, sheets of ornamental water having been formed, and, with the earth so obtained, undulations having been thrown up. New roads and footpaths have also been made; a building for the Herbarium and three handsome conservatories for the more delicate kinds of living plants have been erected; nursery buildings have been put up; and the garden staff have been furnished with comfortable houses.

4. Botanically the most important feature in the garden is its Herbarium, or collection of dried plants. As has already been explained, all the collections prior to Dr. Wallich's visit to England in 1828 were distributed by him to scientific institutions abroad. The commencement of the present collection dates, therefore, from his return to India in 1832. It consists of plants contributed by almost every worker at Botany in India since that date, and of considerable contributions from Botanists in Europe. It is first and foremost an Indian Herbarium, but the plants of South-Eastern Asia, of Japan, of Persia and of Asia Minor are fairly well represented. Those of Europe are also excellently represented; but in African and American plants the collection is comparatively poor. Constant communication and interchange of specimens have been kept up for the last fifty years with the great national collection at Kew; and to the distinguished Directors of that institution, Sir William Hooker and his son and successor Sir Joseph, the Calcutta Herbarium is indebted for invaluable contributions. Interchanges have also been kept up with other European Botanic Institutions, such as the Herbarium of the British Museum, of the *Jardin des Plantes*, Paris, the Imperial Gardens at St. Petersburg and Berlin, the Royal Botanic Gardens at Buitenzorg in Java, at Peradeniya in Ceylon, and at Saharanpore; and with many other institutions. Amongst the private contributors in past times from whom the Herbarium has received the most valuable collections must be mentioned Vicary, Edgeworth, Griffith, Wight, Simons, Law, Gibson, Stocks, Dulzell, Kurz, Miquel, and Maingay. The most important contributions received during recent years have been duly mentioned in my annual report.

The transformation which has taken place in the aspect of the garden has been the work of Dr. King himself, whose skill, taste and assiduity were fully recognized by Sir Ashley Eden and supported by him with liberal grants of money. The garden is now in its scientific capacity admittedly the first of all botanical institutions in Asia, and has been designated by high authority the Kew of the East.

2. Valuable additions were made to the collection of dried plants in the herbarium during the year. The chief contributors were Dr. Aitchison, of the Afghan Boundary Commission; Mr. Thisleton Dyer, Director of the Botanical Garden at Kew; Dr. Gills; Dr. G. Watt; Dr. Rigel, of the Imperial Garden at St. Petersburg; Mr. Medley Wood, of the Botanic Garden, Durban; Mr. Pringle; Mr. H. O. Forbes; Dr. Prain, Curator of the Herbarium, Royal Botanic Garden, Seebpore; Mr. Gustav Mann; Mr. J. F. Duthee; Colonel H. Collett, c.b., of Saharanpore; Reverend J. Campbell, of Manbhoom; and Mr. J. S. Gamble, Conservator of Forests. Four hundred named species were received from Mexico, and three excellent named collections were sent by Mr. Medley Wood from Natal.

3. During the year 8,064 plants were received and 46,104 were issued. Nine hundred and three packets of seeds were received and 2,534 packets were distributed. The plants and seeds were distributed chiefly to Botanical Gardens, Forest Officers, District Officers, and Officers of the Public Works Department. A large quantity was also supplied to private individuals. The principal contributors were the Superintendents of the several Botanical Gardens.

4. Dr. King was engaged for some time in preparing a Monograph on "The species of *Ficus* of the Indo-Malayan and Chinese Countries." The first part of this valuable work has evoked strong approbation from scientific men and bodies, and the Lieutenant-Governor has had pleasure in directing that copies of it be supplied to the great Botanical Institutions of the world.

5. The Lloyd Botanic Garden at Darjeeling was under the charge of Mr. Kennedy. A lease has been obtained of the plot of land between the Botanic Garden and the Eden Sanitarium. This land is being used as a vegetable garden, and is under the charge of the Superintendent of the Botanic Garden. The acclimatised English potatoes have proved a failure, and the experiment made by private growers has also been unsuccessful.

6. A sum of Rs. 1,373 was realized by the sale of surplus plants at the Calcutta garden, and Rs. 1,180 by the sale of produce of the Darjeeling garden.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Government of Bengal.

REPORT ON THE WORKING OF THE FIRE-BRIGADE IN THE TOWN AND SUBURBS OF CALCUTTA AND IN HOWRAH DURING THE YEAR 1886-87.

No. 3970, dated Calcutta, the 21st July 1887.

From—H. J. S. COTTON, Esq., c.s., Officiating Commissioner of Police, Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit, under section 30 of Bengal Act IV of 1883, the following report on the working of the Fire-Brigade in the Town and Suburbs of Calcutta and in Howrah for the year 1886-87.

2. The Brigade was in attendance at thirty-six fires during the year—twelve in the Town, six in the Suburbs, and eighteen in Howrah. The loss of property was estimated at Rs. 64,375. It will be seen that the fires were much less serious than in the previous year. The only important fires were one on board the S.S. *Mira*, in which a portion of the cargo of tea and wheat, to the value of Rs. 20,000, was destroyed, and another on board the ship *Glendarnel*, laden with jute, which sustained damage to the extent of Rs. 10,000. In the Suburbs the fires were mostly confined to thatched and tiled houses. Of the fires in Howrah, only two call for remark—one on the Grand Trunk Road, in which property of the value of Rs. 2,100 was destroyed, and the other at the Ghosery Cotton Mills, in which 6,000lbs. of cotton, valued at about Rs. 1,000, was burnt.

3. There was no loss of life in any of these fires, and the destruction of property was less than that caused in previous years. No fire occurred in any jute warehouse.

4. A memorandum of the fires is enclosed.

5. A statement of the receipts and expenditure of the Fire-Brigade is also enclosed.

6. Under section 23 of the Act, nineteen prosecutions were instituted during the year, and convictions were obtained in twelve cases.

7. Only one license, granted to a dealer in Bhowanipore for the sale of fireworks, was withdrawn in October last under section 24 of the Act.

Statement showing the actual Receipts and Disbursements of the Fire-Brigade Fund for the year ending 31st March 1887.

RECEIPTS.	Budget estimate for 1886-87.			Actual receipts for 1886-87.			Excess over budget estimate.			Less than budget estimate.

CALCUTTA POLICE OFFICE,
The 21st July 1887.H. J. S. COTTON
Officiating Commissioner of Police.

Memorandum of Fires in Town, Suburbs, and Howrah from 1st April 1886 to 31st March 1887.

Number.	Date.	Locality with section letter.	Duration of fire.	Approximate value of property destroyed.	Remarks showing nature of damage done, &c.
Town.					
1	11th April 1886	F. Jorasanko, Chitpore Road	Two hours	3,530	Three large two-storied tiled houses, with shops on ground floor containing country produce.
2	30th	L. Waterloo, Hastings Street..	50 minutes	1,000	A brick building containing oil paint and oilman's stores.
3	6th June	E. Jorabagan, Cotton Street...	Two hours and 50 minutes	7,000	A two-storied brick built house used as a cloth shop.
4	20th August	Second Division River, No. 4 Jetty.	26 hours	20,000	Star line S. S. <i>Mira</i> containing cargo of chests of tea and bags of wheat.
5	26th October	J. Mochuparah, Mirzapore Street.	Two hours	1,500	A tiled house containing glass and crockery ware.
6	16th December 1887	G. Burra Bazar, Chitpore Road.	1 hour and 40 minutes	400	A row of tiled huts.
7	11th January	H. Colootollah, Choonagully	1 hour and 30 minutes	2,000	Twelve tiled houses.
8	23rd	E. Jorabagan	4 hours	5,000	A range of brick houses.
9	18th February	3rd Division Port Police ..	23 hours and 30 minutes	10,000	Ship <i>Glendarnel</i> laden with jute.
10	15th	F. Jorasanko, Chitpore Road	3 hours	1,000	Five large tiled huts.
11	17th	L. Waterloo Street, Strand Road.	1 hour	100	Time ball staff of the Port Commissioners.
12	25th March	B. Coomertoollee, Upper Chitpore Road.	1 hour and 30 minutes	150	A tiled house containing 9 rooms used as a shop for sale of peas.
12	Total fires.			51,680	
Suburbs.					
1	24th April 1886	G. Banipooker	2 hours and 30 minutes	200	A tiled house of 7 rooms.
2	13th June	B. Chitpore, Shambazar	1 hour	100	Six mud huts.
3	23rd October	L. Bhowanipore, Kussa Road	1 hour and 45 minutes	70	One tiled hut.
4	18th December	F. Entally	2 hours	1,000	Twelve tiled huts.
5	26th January 1887	B. Chitpore, Shambazar	1 hour and 45 minutes	70	Four thatched huts.
6	31st February	B. Bellaghatta, Choonaputty	4 hours and 30 minutes	6,000	Ten tiled sheds and a large quantity of lime.
6	Total fires.			7,440	
Howrah.					
1	12th April 1886	Kally Chowdry's Lane, Seebpore.	2 hours	40	One thatched house and cow shed and one cow.
2	16th	Teekinparah, Howrah	45 minutes	100	Two tiled stables. One was entirely burnt down and the other partly; also a horse.
3	18th	Chaddra Bazar Road, Seebpore.	1 hour and 45 minutes	115	Three goulputta huts.
4	18th	Choosery Cotton Mills	35 minutes	1,000	About 6,000 lbs. of cotton.
5	9th May	Teekinparah, Howrah	45 minutes	10	Part of the roof of a tiled hut.
6	26th July	Howrah Station, P. W. S. Y. East Indian Railway.	25 minutes	50	One thatched hut and about 30 callons of creosote and tar.
7	26th October	Ninkorah Lane, Sulkea	1 hour	60	One thatched hut, tackalipose and bedding.
8	26th November	Seebpore, Batoo	1 hour and 45 minutes	500	Five thatched huts, bedding, copper cooking utensils, &c.
9	5th January 1887	Chowra Busty, Seebpore	30 minutes	10	Part of the roof of a thatched hut.
10	12th	Bajo Seebpore	3 hours and 30 minutes	200	Two thatched huts and part of a third.
11	13th	Darogah Bagan, Sulkea	1 hour and 30 minutes	700	A thatched hut, an oil mill, a furniture shop and two cows.
12	2nd February	Howrah Grand Trunk Road...	8 hours and 30 minutes	2,100	Two tiled houses and a pucca house containing 1,000 barrels of asphalt, 300 of resin, 200 of Portland cement, and 200 cases of whitening, part of which was damaged.
13	10th	Jungleparah, Seebpore	1 hour and 30 minutes	75	Two huts and a thatched shed.
14	17th	Parrah Bana, Seebpore	1 hour and 30 minutes	10	Part of a house.
15	17th	Baroch Barrah, Seebpore	45 minutes	25	One thatched house.
16	28th	Khooroot Road, Seebpore	1 hour and 30 minutes	10	Ditto ditto.
17	9th March	South Bally, Teekinparah, Howrah.	25 minutes	50	Ditto ditto.
18	23rd	Satra Ghat, Seebpore	1 hour and 45 minutes	200	Four thatched huts.
18	Total fires.			5,255	
38	GRAND TOTAL		64,375	

CALCUTTA,
The 21st July 1887.

H. J. S. COTTON,
Offg. Commissioner of Police.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government during the week ending the 6th August 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Aug. 6, '87	4.69	Weather—seasonable. Prospects favourable except in Culna, where the rainfall is short. Rice still about 20 seers per rupee. An outbreak of cholera in Burdwan.
	Culna	1.32	
	Cutwa	7.14	
	Raneegunge	6.65	
	2 Bankoora, " 6, '87	9.81	Weather—seasonable. Heavy showers all over the district. Transplantation of <i>aman</i> rice is still proceeding. Prospects of sugarcane and other standing crops good. Prices continue unaltered. Public health good.
	Bishenpore	12.07	
	3 Beerbhoom, " 6, "	3.11	Weather—cool and cloudy with high winds and frequent showers. Young <i>aman</i> rice is coming up well. <i>Aus</i> is also reported as flourishing in the limited tract where it is grown. Prices show a downward tendency. Cattle-pox has nearly disappeared. Public health is indifferent, as there is a good deal of fever reported on the lowlands.
	Rampore Haut	2.48	
	4 Midnapore, " 6, '87	4.26	Weather—sultry when not raining. Crops in the south are good; in the north they are excellent if they survive the floods. The Cossye and Silai rivers have burst the embankments in places. Many miles of country including the town of Ghatal and the whole of Chetpoo pergunnah submerged. Rivers, however, rapidly subsided. Extent of permanent damage not yet known.
PRESIDENCY DIV.	5 Hooghly, " 6, "	2.69	Weather—seasonable. Good rain has fallen in the west of Jehanabad and prospects are now generally favourable. Public health good.
	Scrampur	3.12	
	Jehanabad	6.49	
	Howrah, " 6, "	2.63	Weather—seasonable. Transplanting of <i>aman</i> seedlings in progress. <i>Aus</i> , sugarcane and jute promising.
	Oolcoberiah	3.37	
	<i>Central Districts.</i>		
	6 24-Perghu., Aug. 6, '87	3.33	Weather—seasonable, with occasional showers. Prospects of crops satisfactory. Transplantation continues. Health of people generally good, but stray cases of cholera reported.
	7 Nudda, " 6, "	1.25	Weather—cool; frequent showers and cloudy sky. <i>Aus</i> on churs has been reaped. Transplanting of <i>aman</i> behind hand for want of rain. Sugarcane and jute doing well. Indigo manufacture coming to an end; poor outturn from high lands and fair outturn from chur lands. Public health good. Rivers risen rapidly.
	Kushtea	2.73	
	Mcherpur	2.90	
	Chudanga	1.90	
	8 Khoosia, " 6, '87	3.05	Rivers risen rapidly. Weather—cloudy and showery. Prospects of <i>aman</i> and <i>aus</i> paddy favourable. Public health good.
		1.87	
	9 Jessore, " 6, "	1.03	Weather—extremely hot with a very scanty rainfall. Rain that fell during the week has done good to the paddy crops, the prospects of which continue to be good, but still more rain is wanted for transplanting <i>aman</i> paddy. Untimely subsidence of flood has caused some injury to the paddy crops in the jurisdiction of Snilkupa police-station. Public health fair.
	Jhenidah	0.87	
	Magurah	1.95	
	Narail	2.00	
RAJSHAHY DIV.	10 Bongong, " 6, '87	1.79	Weather—very hot; rain at intervals. Transplanting of <i>aman</i> still going on. <i>Zil</i> , sugarcane and jute progressing. Public health good.
	Moorshedabad	3.56	
	Lalbagh	2.90	
	Kandi	2.07	Weather—heavy rain. Harvesting of <i>bhadoi</i> has begun. Rain has been very desirable for transplanting of <i>haimanti</i> crop.
	Juagipur	5.59	
	Dinagopore, " 6, '87	11.33

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong. Aug. 9, '87	15.00	Weather—seasonable. Transplanting of <i>aman</i> continues. Prospects of crops good. Prices stationary. Cholera still reported; general health good.
	23 Noakhally Aug. 5, "	10.44	Weather—seasonable. <i>Aus</i> crop is being harvested. Transplantations of <i>aman</i> continues. Prospects much improved. Public health fair.
	24 Fenny " 4, '87	7.84	
	24 Tipperah " 4, '87	6.16	Weather—seasonable. Prospects excellent in every way. <i>Aus</i> and jute are being gathered with excellent outturn. Rain of 2nd instant, nearly four inches in the station, has enabled agricultural operations with respect to <i>aman</i> to be vigorously taken in hand.
	24 Brahmanbariah " "	2.69	
	Chandpur " "	4.00	
	25 Chittagong Hill " 2, '87	4.74	Weather—rainy throughout the week with occasional sunshine. <i>Joom</i> paddy doing well. Transplanting in low lands continues. More rain wanted.
	Tracts. " "		
	Hill Tipperah " 4, "	3.54	Weather—rainy. Transplantation of <i>aman</i> paddy still continues. Sugarcane doing well. Prospects of <i>joom</i> crops fair. Several cases of fever reported.
BEHAR.			
PATNA DIV.	26 Patna Aug. 6, '87	4.98	Weather—at first dry and hot, latterly rainy. Rain will benefit <i>bhadoi</i> crops and sugarcane which are coming up well. Transplantation of paddy is going on, but more rain is wanted in parts of the district. Cholera is prevalent in the Behar sub-division; sporadic cases are also reported in the other sub-divisions.
	Burh " "	3.05	
	Behar " "	8.57	
	27 Gya " 6 "	1.86	Weather—cloudy. Paddy transplantation going on. Prospects good. Cholera still raging in the interior. Fever and small-pox also reported.
	28 Shalabad " 6 "	3.59	Weather—cloudy and rainy. Transplanting of rice is in progress. <i>Bhadoi</i> crops are in good condition. Cholera is abating, but has not completely disappeared. Prices continue stationary.
	28 Juxar " "	4.83	
	Sasaram " "	4.70	
	Bhulna " "	11.70	
	29 Darbhanga " 6 "	3.83	Weather—rainy. There has now been plenty of rain, and though the Tajpur figures are low, it was raining there when the report left. Injury to indigo in the north from excessive rain. Other crops doing well. Price of rice averages 18 seers per rupee. Public health generally good.
	Madhubani " "	3.90	
	Tajpur " "	1.04	
	30 Mozufferpore " 6, '87	4.99	Weather—sky densely overcast with continuous rain. Condition of all crops good. Transplantation of rice still in progress. Much cholera still reported.
BAGULPORE DIV.	Hajipur " "	6.0	
	Sitamarhi " "	1.46	
	31 Saran " 6 "	5.07	Weather—cloudy and rainy. More rain wanted for rice crops. Transplantation going on on low lands. Prospects of <i>bhadoi</i> crops improved by recent rain. Cholera still reported.
	Sewan " "	3.22	
	Gopalgunge " "	2.79	
	32 Chunar " 6 "	1.55	Weather—wet and rainy. Rainfall of the week has been decidedly beneficial to both the <i>bhadoi</i> and paddy crops, though more rain is wanted for the latter. It is copiously raining to-day (6th), and shows signs of heavy downpour. Prices rising in the Bettiah sub-division. Public health not very good; cholera and fever prevailing in the district.
	Bettiah " "	1.70	
	33 Monghyr Aug. 6, '87	3.95	Weather—cloudy and rainy. Transplantation of winter rice in progress. More rain wanted. <i>Bhadoi</i> crops doing well where not damaged by the rising of the Ganges. Cholera still prevailing in places.
	Begusarai " "	2.74	
	Jamui " "	6.31	
	34 Bhagalpore " 6 "	3.16	Weather—seasonable. Rain has much benefited all crops. Transplantation can now be completed. Early rice and <i>marua</i> good. The dearns will have a further loss in <i>makai</i> from floods. Outturn of this crop will be very poor.
BAGULPORE DIV.	35 Purneah " 6 "	2.10	Weather—fair with heavy showers. Crops doing well.
	Kishengunge " "	1.65	
	Arrareuh " "	1.40	
	36 Maldah " 6 "	2.22	Weather—seasonable. Rivers fall again. <i>Bhadoi</i> crops are ripening with very fair prospects except in the northern tracts, where they have been partially damaged by early floods. Transplantation of winter paddy is going on. Common rice 20 seers per rupee. Public health generally good.
	Chanchal " "	1.69	
	Shibgunge " "	7.11	
	Gajole " "	5.80	
	37 Southal Pergah " 6 "	2.62	Weather—cloudy. Heavy rain during the week. Transplanting of winter paddy more than half finished. Prospects of <i>bhadoi</i> crops fair.
	Deoghur " "	10.58	
	Godda " "	3.83	
	Janitara " "	6.63	
	Pakour " "	4.84	
	Rajmehal " "	7.86	
ORISSA.			
ORISSA DIV.	38 Cuttack " "	...	Report not received.
	39 Pooree " 4 "	0.84	Little cloud or rain. Transplantation of <i>sarad</i> rice in progress. Rivers have gone down. Rain very much wanted. Common rice 24 seers 12 chittacks per rupee in the Sudder sub-division, and 21 seers 2 chittacks in the Khoorda sub-division. Cases of cholera reported.
	40 Balasore Aug. 5, "	5.05	Weather—cloudy and seasonable. Weeding and transplanting of paddy going on. Public health good, except that a few cases of cholera are reported from the north. Cattle-disease is prevalent in parts of Balasore thana.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	41 Hazaribagh Aug. 5, '87	5.68	Weather—seasonable. Heavy rain all over the district. All crops doing well. Transplanting of rice still in progress. Cholera reported from several thanas.
	42 Lohardugga " 6 "	5.40	Weather—seasonable. Rain throughout the week. Prospects of crops excellent. No change in prices. Cholera still continues. Public health otherwise good.
	Palanow " "	8.54	
	43 Singhbhum " 5 "	2.86	Constant showers during week till 3rd. Weather cool and seasonable. Prospects of crops good. General health good.
	44 Manbhum " 6 "	6.51	Rain alternating with sunshine. Transplanting of paddy going on. Maize, millet, and sugarcane doing well. Prospects good. Common rice selling from 21 to 27 seers per rupee. Public health good.

STATISTICAL DEPARTMENT,

The 8th August 1887.

W. C. MACPHERSON,
Offy. Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of July 1887.

	Inches.	Date.	Hour.
The mean pressure of the month	29.518		
The average pressure of July from 24 years' registers ...	29.537		
The highest pressure in the month	29.713	3rd	22h.
The lowest pressure in the month	29.288	18th	16h.
The range of pressure	0.425		
The total number of hours of bright sunshine during the month	95.5		
The maximum possible number of hours of sunshine ...	413.1		
☉			
The mean temperature of the month	82.5		
The average temperature of July from 24 years' registers ...	83.5		
The highest temperature in the month	92.4	17th	
The lowest temperature in the month	76.4	10th & 15th	
The range of temperature during the month	16.0		
The mean daily range of temperature	8.9		
The greatest range of temperature in one day	13.1	16th	
Per cent.			
The mean humidity of the month	87		
The average humidity of July from 24 years' registers ...	85		
Inches.			
The mean vapour tension of the month	0.908		
The average vapour tension of July from 9 years' registers ..	1.002		
The mean cloud proportion of the month	8.24		
The average cloud proportion of July from 10 years' registers ...	8.10		
Inches.			
The total rainfall of the month	18.19		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	17.56		
The average fall of July from 48 years' registers	12.84		
The greatest fall in 24 hours	6.18	9th	
Days.			
The number of rainy days in the month	27		
The average number of rainy days in July from 24 years' registers	25		
☉			
The mean maximum equilibrium temperature of solar radiation during the month	140.3		
The mean difference of sun and air temperatures	53.2		
The greatest sun temperature	155.9	4th	
The greatest excess of sun over air temperature	67.2	4th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	75.9		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2.3		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	4.5	16th	
Miles.			
The mean movement of the wind per day	118.8		
The greatest movement of the wind in one day	267.0	10th	
The greatest movement of the wind in one hour	20.0	10th 6 to 7 A.M.	

The number of hours with winds from each of the 8 points—

N. 14. NE. 32. E. 122. SE. 145. S. 126. SW. 190. W. 68. NW. 27. Calm 20.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.6° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

Meteorological Report of the Province.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, DURING THE MONTH OF JULY 1887.

THE month of July in Bengal is one of the most important of the whole year from a meteorological point of view, for it is the first complete month of the actual monsoon period. It is generally the case that the complete establishment of the two great branches of the monsoon current does not take place till quite the end of June or beginning of July, and usually the rainfall in the Lower Provinces in July is heavier than during any other month of the year. Another reason why the meteorology of this month is important is that the distribution of the rains in July generally gives a rough indication of the probable distribution of the rainfall during the whole of the monsoon period.

The circumstances and conditions of the establishment of the south-west monsoon have been dealt with in previous reports, and it has been pointed out that, while during June the rainfall in Bengal is practically almost entirely brought up by the Bay of Bengal monsoon current, at the end of this month, or commencement of July, the conditions change, and the Bombay branch of the monsoon, blowing from the Indian Ocean and the Arabian Sea, advances slowly across Central India and the Central Provinces, and makes its influence felt in Bengal, and particularly in the western districts of the province. In its forward progress the Bombay current meets the Bay of Bengal monsoon current, and the interaction between the two currents gives rise to ascensional motion, which, according to well known physical laws, causes condensation of the aqueous vapour in the form of rain. The Arabian Sea branch of the monsoon current therefore exercises a considerable influence on the rainfall in Behar, Chutia Nagpur and Bengal generally during July.

The Bay of Bengal current, if it alone prevailed, as is the case to a certain extent in June, would undoubtedly deposit the greater part of its vapour as rain in the neighbourhood of the sea coast, and along the areas nearest to the hills in the east and north of the province. The interaction between the two branches of the monsoon current is undoubtedly greatest in the western districts of the province, and therefore tends to give heavier rainfall to Chutia Nagpur, South Behar and West Orissa, or to those parts of the province which would receive the smallest amounts of rain from the direct action of the Bay of Bengal branch; that is, the combined effect of the two branches is to produce in normal years a fairly uniform rainfall over the whole province. The amount of the interaction between the two branches of the monsoon current will depend on two things—first, on the relative strengths of the two currents; and second, on the position or direction in which the currents meet, for as the Bengal current is changed by the physical configuration of the country over which it is flowing from a south-westerly wind at the head of the Bay, first into a southerly, then into a south-easterly, and finally into an easterly current, it is evident that interaction with the westerly current will be more marked in Behar, where the Bay of Bengal current is easterly, than it will be in Orissa, where it is south-westerly. Thus in normal years the rainfall in the western parts of Behar and of Chutia Nagpur is practically entirely brought about by the interaction above described.

It must, however, be remembered that the south-west monsoon winds are by no means steady. They blow vigorously for a few days, giving more or less general rain, and then fall off in strength, when the rainfall becomes local. A fresh rush of winds then occurs, followed by general rainfall with subsequent lulls as just described. It is during these periods of comparative calm that conditions become favourable for the generation of small cyclonic storms, which in most cases are formed near the head of the Bay, though they also, but more rarely, may form over the land. With the advance of these cyclonic storms heavy rain generally occurs, and it depends to a great extent on the character of these small storms or atmospheric whirls, that is, whether they are of concentrated or of diffused nature, whether the rainfall which accompanies their advance falls only near the path of the storm, or whether it is widely diffused over a large portion of the province. With the advance of these storms strong humid winds generally set in over the whole province, giving rise to general rain for some days. The precise conditions which determine the formation of these storms are, however, not clearly understood, and while in some years a constant succession of such storms will occur, in other years they may be almost absent, or at all events very few of any importance occur.

It will thus be seen that the meteorological conditions of July depend mainly on two points—first, on the character and intensity of the two monsoon currents from the Bay of Bengal and Arabian Sea; and second, on the occurrence, nature and paths of the small cyclonic storms which frequently occur in the rainy season.

Average distribution of the rainfall in July.—Two lines of maximum normal rainfall may be traced in Bengal during July. The first line is more or less parallel to the sea coast, and is caused by the humid winds from the Bay of Bengal. The second line of maximum rainfall is more or less parallel to the hill ranges in the east and north of the province, and this is accounted for by the well-known fact that these ranges cause ascensional motion of the Bay of Bengal current, and consequent precipitation of heavy rainfall. The line of 20 inches average rainfall in July runs through the Eastern Bengal districts at some little distance from the coast line, the distance from the coast increasing as it runs to the eastward; the second line of 20 inches average rainfall is found along the Darjeeling Hills, running almost east and west. The line of 15 inches average rainfall starts from Saugor Island and runs in an easterly direction parallel to the first-mentioned

line till near the Tipperah Hills, when it suddenly turns in a north-westerly direction, finally passing through Bogra and Dinagepore, where it is more or less parallel to the line of 20 inches in the Darjeeling Hills. The line of 12 inches average rainfall runs from Motihari in Northern Behar almost due south-east parallel to the 15-inch line to Rajmehal, and thence through Jessore along the borders of the Chutia Nagpur district into South Behar. Inside this area of average rainfall of less than twelve inches there are two areas of considerable interest. The first is the area of minimum rainfall of the month, which embraces the Jessore district, some parts of the Nuddea and Burdwan districts, as well as the Rajshahye district. This minimum fall is explained by the fact that this portion of Bengal is not influenced by either of the three causes which tend to produce increased rainfall: namely, it is not near the coast line when the humid winds expend their first force; it is not near any hill ranges where ascensional air motion will take place; and third, it is not under the influence of the interaction between the two branches of the monsoon current as previously described. The other area of interest is one of increased precipitation near Patna. The Chutia Nagpur Division receives during the month a normal rainfall of between twelve and fifteen inches, and this comparatively large amount is evidently produced by the interaction of the two branches of the monsoon current over this district.

Meteorology of the month.—At the commencement of July the monsoon current blowing over the province from the Bay of Bengal was decidedly light, and during the first six days the passage of the current over Bengal was partially stopped by the formation of a feeble whirl in the Bay of Bengal, which only reached the land on the 7th, close to Saugor Island. With the advance of the feeble storm over the land a moderately strong monsoon current then commenced to flow over Bengal, and gave moderate amounts of rain. This depression had practically disappeared on the 8th, but on the 9th a new depression was formed in Central Bengal, which commenced to move in a north-westerly direction, passing near Burdwan and then into the North-West Provinces, finally disappearing on the 13th in the north-east of Rajputana. Again, with the advance of the depression a moderate monsoon current flowed over the province. This small storm was still advancing when, on the 11th and 12th, another small depression commenced to form at the head of the Bay, and over South-East Bengal, which depression afterwards moved in a north-westerly direction and only filled up and disappeared over Beluchistan on the 17th. The indraught towards this storm had ceased to affect Bengal after the 15th, and the most noticeable feature in the weather on the 16th was the setting in of a westerly wind current over the greater part of the province, due to the abnormal strength of the Bombay branch of the monsoon, which drove back the easterly and south-easterly wind current which had previously been blowing. A slight area of comparatively low pressure was also developed on the 16th over the eastern part of South Behar. Conditions on this day were not favourable for heavy rain, and only light and local falls were reported over the greater part of the province. On the 17th the weather conditions over Bengal became extremely abnormal, in the fact that at practically all stations in the province wind was north-westerly. This was apparently brought about by the unusual strength of the westerly Bombay current, which entirely drove back the very feeble monsoon current which was blowing from the Bay of Bengal, and thus practically at all stations from Buxar down to Negapatam winds became westerly and north-westerly. Under these circumstances, a short break in the rains became established, and on this day practically the whole province was rainless. Such abnormal conditions as these, however, could not continue long, and on the 18th the Bay of Bengal current commenced to strengthen slightly, and in South Bengal there were distinct indications of interaction between the two opposing wind currents, which gave rise to somewhat numerous and heavy local showers, but it was evident that the southerly winds would gradually drive back the abnormal north-westerly winds. On the 19th the advancing southerly current had made further progress, and at all, except a few stations in the west of Behar and Chutia Nagpur, winds had become southerly and south-easterly. The amount of interaction became larger, and in North Bengal heavy rain fell, but elsewhere rainfall was light and local. On the 19th, however, a rapid fall of pressure took place in the north-west angle of the Bay, and a new depression was formed, which, however, only passed over the land on the 24th and 25th and disappeared on the 28th. During the whole period of the existence of this feeble storm, the winds blowing in connection with it were very light. There was, however, the usual indraught towards the storm, and thus the rainfall-bearing current was deflected towards the depression, and the greater part of the province received only local showers during the existence of the storm at the head of the Bay, though the area in immediate proximity to the storm received more general and heavier rain. Directly, however, the feeble storm had passed inland, the monsoon current blowing from the Bay of Bengal commenced to increase in strength and to pass over the land, and on the 26th the wind velocity had strengthened at Saugor Island from 15 miles an hour on the 26th and 27th to 20 miles an hour on the 28th, while for the 24 hours ending 10 A.M. of the 29th the velocity had averaged 27 miles an hour. For the last two or three days of the week therefore the monsoon current blowing over the province was decidedly strong, and rainfall became general and in many cases heavy on the 27th, 28th, and 29th. The weather conditions at the close of the month were in fact decidedly favourable for the continuance of rainfall in Bengal, and more favourable than they had been at any previous time throughout the month.

Speaking generally, it may be said that the monsoon current blowing from the Bombay side during July has been abnormally strong throughout the month, and this has caused the

Bay of Bengal monsoon current to be deflected in a more westerly direction than is usual. Hence the rainfall due to this current has been deflected towards the Burma coast, and particularly heavy rain has been reported along this coast, while the rainfall over Bengal has been correspondingly deficient.

Bengal thus has been under the influence of no less than four distinct barometric depressions during the month, the formation and history of which may be shortly described as follows :—

1 *Feeble depression of 2nd to 8th July.*—On the 2nd instant pressure became comparatively low off the Arakan coast, and winds showed a slight tendency to circulation along this coast. On the following day these indications of the formation of a feeble barometric depression or whirl were confirmed, and the depression was probably on this day near the centre of the Bay and south of a line joining Akyab and Gopalpore. On the 4th the whirl had developed to a sufficient extent to cause a distinct cyclonic circulation of winds over the whole of the northern half of the Bay, and on this day probably the centre of the whirl or feeble depression was to the west of the centre of the Bay, and to the east-south-east of Gopalpore. On the 5th it had distinctly developed and had advanced in a north-westerly direction, the centre being to the south of Saugor Island and about east-north-east of False Point. Notwithstanding that it had distinctly developed, it was still exceedingly feeble, and the wind velocities in connection with it were very small, though the circulation was completely cyclonic. On the 6th it had again advanced, and on this day apparently the centre was close to Saugor Island, but it was clear that it was not developing to any extent, but that it was rather becoming more feeble. On the 7th it had passed inland, but it had weakened to such an extent that it had almost disappeared, and on the 8th it had quite filled up. For the whole period of its existence the winds accompanying it, as judged by the coast stations were comparatively weak, but at sea it probably gave rise to strong winds and squally weather. In its advance it brought rather heavy rain, and on the 6th Balasore, Jellasore, Contai, Saugor Island, Devog, and other stations each reported about 2 inches of rain.

2. *Depression of 9th to 13th July.*—On 9th July the pressure fell decidedly rapidly at some of the stations in Central Bengal, and a distinct barometric depression was formed over this area. The depression was accompanied by a decided cyclonic circulation of winds. On the 10th the depression had developed very rapidly, and had moved slowly in a westerly direction. On this day pressure fell rapidly at the stations in Central and Western Bengal and in Chutia Nagpur, the fall at some stations almost equalling 0·15", while many stations such as Calcutta, Burdwan, Bankoora, and Raneengunge, &c., showed falls considerably exceeding a tenth of an inch. Winds also decidedly increased in force, and there was again on this day a strong cyclonic circulation of winds round the centre of the feeble storm. The centre was near Burdwan, where a pressure of 29·361" was registered, and towards which point baric gradients were decidedly steep. The small storm was fed by a powerful monsoon current, and heavy rain was brought on both the 9th and the 10th to the districts affected by the storm. On the following day pressure fell rapidly at Allahabad and Benares, and the depression, which was on the previous day in West Bengal, had apparently been transferred to this district while on the 12th it had advanced into Bundelkund, and on the 13th into the north-east of Rajputana, where it filled up.

3. *Depression of 11th to 17th July.*—On Monday, the 11th, also pressure began to fall off the east coast of the Bay, and this continued on the 12th, when pressure became decidedly low over South-East Bengal, and it was evident that a small barometric depression was forming either over the sea area just to the south of the Sunderbuns, or over the land area to the south of Jessore. On the 13th a distinct depression was developed, and at 10 A.M. on this day its centre was nearly between Calcutta and Saugor Island. During the same afternoon the centre passed only a short distance to the south of Calcutta in a westerly direction. This storm was small; but with a moderately steep gradient and pressure at Calcutta fell to about 29·3". On the morning of the 14th the small storm had passed into the Central Provinces and Central India. This storm again advanced in a westerly direction, and on the morning of the 15th it was near Hoshuugabad. On the morning of the 16th the small storm had reached Hyderabad in Sind, and was disappearing across the Indus, while on the 17th it had disappeared over Beluchistan. The storm which appeared in South Bengal on the 12th had therefore a life history of from five to six days, and it travelled over a distance of from 1,500 to 1,600 miles quite unbroken; the direction of its movement was a little to the north of west. It was accompanied by a clearly marked cyclonic circulation of winds, but though the wind force at the land stations was only moderate, during its formation and advance very strong winds were blowing over the sea at the head of the Bay, and weather was decidedly squally, if not rather stormy, though at no time was the storm of any particular intensity.

Depression of the 19th to 28th July.—On the 19th instant a rapid fall of pressure took place in the north-west angle of the Bay, the fall at False Point being 0·127". A distinct but feeble barometric depression was thus formed, the centre of which was to the south-east of False Point, and which was accompanied by a feeble cyclonic circulation of winds. This small depression was the principal feature in the meteorology of the last ten days of the month, and it continued to exist without intensifying to any material extent, and without any movement beyond a slight shifting of the centre from day to day up till the 24th. On the 20th the centre of the depression was apparently to the south of Saugor Island; on the 21st the centre of the wind circulation was between Saugor Island and Balasore, and on the 22nd the centre of the wind circulation was between Balasore and False Point.

On the 23rd pressure had fallen over the whole province, the fall being largest in the north-west angle of the Bay, and the small barometric depression which existed over this area decidedly intensified. The lowest pressure reported on this day was 29.513" at Balasore, and the centre of the depression appeared to be between this station and False Point. A very distinct cyclonic circulation of winds accompanied the very feeble storm, but wind velocities in connection with it were small. On the 24th pressure again fell generally over the province, the fall being very rapid in the north-west angle of the Bay, where at Saugor Island it amounted to 0.151". This was produced by the further intensification of the depression, the centre of which on this day was decidedly nearer to the land and to Saugor Island than it was on the previous day, and on this date the centre appeared to be almost equi-distant between Saugor Island and Balasore. Pressure at Saugor Island at 10 a.m. on the 24th was 29.391", and at Balasore 29.409". Winds again showed a very complete cyclonic circulation round the depression, and practically this circulation affected the wind directions at all the stations in the province. Wind velocities in the neighbourhood of the disturbance, however, continued moderate only, though undoubtedly the weather over the sea area at the head of the Bay was decidedly squally. On this day the depression appears to have commenced to move in a north-westerly direction, and at 10 a.m. of the 25th it was in the extreme west of South-west Bengal, and passing into the south of Chutia Nagpur. On the morning of the 26th it had travelled towards Jubbulpur and Sutna, where on the 27th it rapidly diminished in intensity, and on the morning of the 28th it had practically disappeared. This small storm had therefore a life history of about eight days, of which for the first five it remained almost stationary, and it was only during the last two or three days of its existence that it moved in a north-westerly or west-north-westerly direction, gradually decreasing in intensity in its progress over the land.

These four depressions, it will be noticed, have all affected the central, western and south-western districts of Bengal only, and by the rainfall they have brought they have caused the rainfall of these districts to be heavier than they otherwise would have been, and thus many parts of these districts have received falls in excess of the normal, while considerable tracts of the north and east of the province have received very deficient rainfalls.

Pressure.—The variations of pressure have been controlled to a great extent by the passage of the succession of depressions just described. For the first week of July the mean pressure of the province of Bengal was in excess of the normal by 0.019", while in Assam the excess was 0.015"; in the second week, as Bengal was under the influence of two depressions, pressure was decidedly below the normal, the defects ranging from 0.123" at Burdwan and 0.113" at Calcutta, where these stations were fully influenced by the depressions, to a defect of 0.063" at Purneah. In Assam, too, the general defect was nearly 0.08". In the third week pressure was rather largely in defect at its commencement, while at its close it had become much more nearly normal, while in the fourth week pressure was again below the normal, the defects being largest at the stations affected by the depression, where at Saugor Island and Calcutta they amounted to about 0.06", while at Sibsaagar and Purneah, which were unaffected by the depression, the pressure was almost normal. For the whole month the mean pressure has been below the normal at almost all stations, and taking only those stations into consideration from which means have been obtained for several years, the average defect in pressure of the province has been 0.017", while the extreme variations are from a defect of 0.037" at Calcutta, 0.032" at Chittagong, 0.028" at Saugor Island, and 0.027" at False Point to an excess of 0.007" at Purneah and 0.002" at Hazaribagh. These figures would therefore tend to show that pressure has been relatively low at the head of the Bay, and perhaps over the sea area, where one of the depressions remained stationary for several days.

Temperature.—The variations of temperature during the month have not been of great importance, and the mean temperature of the various meteorological districts has in no case varied from the normal of the month by more than about half a degree, and thus while North and South Behar and East Bengal have recorded temperatures from 0.2° to 0.5° in excess of the normal, Orissa, South-West Bengal and Chutia Nagpur have recorded temperatures from 0.3° to 0.5° in defect of the normal, and in North Bengal temperature has been quite normal. For the whole province for July temperature has been on the average precisely normal. In Assam the mean temperature has been in excess of the normal by 0.6°.

Rainfall.—The causes which have affected the rainfall in Bengal during July have already been explained. The Bay of Bengal branch of the monsoon which has been blowing has on the whole been rather weaker than usual, but the Bombay branch blowing from the Arabian Sea has been of very great strength, and has swept across India to an abnormal extent, and has thus had the effect of deflecting the Bay of Bengal branch in a more westerly direction than usual. The rainfall from the Bengal current has been determined towards the Burma coast, and the greater part of Bengal (and particularly the eastern and northern districts, which depend almost wholly for their rainfall on this current) has received a rainfall rather largely in defect of the normal. This scarcity of rainfall has, however, been compensated for in some districts by the formation and passage of the four barometric depressions which have previously been described. The districts which have been most affected by these depressions have been Southern and Western Bengal and parts of Orissa and Chutia Nagpur, and the distribution of the rainfall, as compared with the normal, exactly agrees with the area which has thus been affected. The rainfall in Bengal generally, owing to the deflection of the rain-bearing current, has been considerably below

the normal, but while this is the case, South-West Bengal has received a fall three per cent. in excess of the normal. In Chutia Nagpur the fall for the month has been seven per cent. in defect of the normal, and in Orissa the defect has been nine per cent. The defects in the other districts which have scarcely been affected by the passage of the depressions have been much larger, and thus in South Behar the defect has been equal to seventeen per cent. of the normal, and in East Bengal to twenty per cent. In the two northern districts the defects have been excessive, and thus in North Bengal the defect has been thirty-seven per cent., and in North Behar it has been no less than forty-one per cent. of the normal. If these various districts may be said to have an equal value in the calculation, then the average rainfall of the whole of Bengal for July may be said to have been equal to eighty-two per cent. of the normal.

The comparison of the actual rainfall of the various great divisions of the province during July with the normal is most accurately shown in the form of a percentage. The figures representing the rainfall for the month, calculated in this way, are included in the table below under the heading of July. This table really gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first seven columns giving the actual rainfalls in each division in each month expressed as a percentage of the normal, while the eighth column of figures shows the actual rainfall for the first seven months of the year expressed as a percentage of the normal for the period; the figure 100 will therefore in this table represent a normal rainfall, a number larger than 100 an excess fall, and so on:—

Meteorological districts.	January.	February.	March.	April.	May.	June.	July.	Total actual rainfall of first seven months expressed as a percentage of the normal fall for the period.
Orissa	119	Nil.	137	60	103	66	91	94
South-West Bengal	292	2	253	54	139	83	103	104
East Bengal	412	14	208	34	71	79	80	82
North Bengal	530	2	274	114	158	139	63	121
North Behar	381	Nil.	127	109	177	135	59	105
South Behar	411	Nil.	263	164	424	70	83	119
Chutia Nagpur	500	Nil.	10	111	331	73	93	105

From the above table it will be seen that the districts in which the rainfall has been so largely in defect in July are those in which the falls were in large excess in the previous months; and that, taking the rainfall of the first seven months of the year into account, all districts, except East Bengal and Orissa, have received falls in excess of the normal, and that in North Bengal and South Behar the falls have been rather largely in excess, the excess falls equalling about 20 per cent.

Taking up the rainfall of the Province more in detail, when compared with the normal for July, the province is clearly divided into three sections, and a tract of country which has received excess rainfall lies between two areas of decided defect. The district of excess rainfall may be roughly described as a band of country varying from about 50 to 100 miles in width, which starts from the Sunderbuns running northwards, and including the greater part of the 24-Pergunnahs district, then including parts of the Midnapore and Bankoorah districts, and the greater part of Burdwan and Moorshedabad. The band then suddenly turns towards the west and includes part of the Sonthal Pergunnahs, parts of the Monghyr and Gya districts, and a considerable part of Hazaribagh. There are also districts of excess falls in Cuttack, Balasore and Chittagong. The excess falls in some of these districts are considerable, and in a good many instances exceed five inches, while at Tumlook in the Midnapore district the excess is 8.52 inches. On either side of this band of excess rainfall, the falls are all in defect, the district to the west and south-west of the excess region generally showing a defect of less than three inches, while to the east and north of the area of excess the defects are much larger, and the greater part of this area shows a defect exceeding three inches, and a large area a defect of more than five inches, while there is a small area in North Bengal represented by such stations as Julpigoree, Micklijunge and Buxa, and another area in South-East Bengal represented by Comilla and Feuny, which have received falls more than ten inches below the normal for the month. Taking the areas into consideration, only about one-fifth or one-sixth of the province has received an excess fall, while the remainder has been decidedly in defect.

The actual falls which have been received during the month have varied even more largely than usual, and while some stations in the province in North Bengal have received a fall of about 30 inches and upwards, and others in the extreme south-east have received a similar quantity, other districts in North Behar and one station in Cuttack have received falls of less than five inches during the month.

The districts which have thus received falls largely in defect of the normal are Pooree, Krishnagore, Jessore, Mymensingh, Tipperah, Furreedpore, all the districts in North Bengal and in North Behar, and all in South Behar, except the Sonthal Pergunnahs. In Chutia Nagpur Manbhoom has been also in decided defect.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of July in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being given for the area which each station represents. This gives a more

accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting station in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100 :—

DIVISION.	DISTRICT.	Normal district rainfall, July	Actual district rainfall, July 1886.	Percentage of actual to normal rainfall.	Percentage excess (+) defect (—)

The extreme variation of temperature	13.5
The maximum temperature	89.4
The highest velocity of the wind in one hour	...	Miles.	14
The highest pressure of wind on one square foot	...	Lbs.	Not measureable.
The mean relative humidity	...	%	85
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	87
The total fall of rain from 31st July to 6th August 1887	...	Inches.	3.26
The average fall of the corresponding period for 24 years, S. G.'s Office	3.75
The total fall from 1st January to 6th August 1887	38.37
The average fall of the corresponding period for 24 years, S. G.'s Office	37.43

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Alipore Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

c overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lightning, d dew.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the readings during the same period for the past 30 years. The humidity of the atmosphere is expressed as a percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number of days in which rain has fallen is indicated by the number of days in which the rainfall is greater than the normal mean of the month. The district readings in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch has fallen. * Means for six days.

the week ending Friday, the 5th August 1887.

variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall, the normal means of the district are the numerical averages of the rainfall return received in the district, i. e., from the total rainfall at the sub-division

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 9th August 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
5TH OF AUGUST 1887.**

At the close of the previous week, a small cyclonic storm, which had formed at the head of the Bay, had advanced inland through South-West Bengal, and had filled up and disappeared near Sutna on the 28th. In the rear of the storm a very strong monsoon current set in from the Bay of Bengal, and on the 30th, the first day of the present week, conditions were decidedly favourable for general rainfall in Bengal. The strength of the monsoon current blowing at the head of the Bay may be inferred from the velocity of the wind as registered at Saugor Island, and on the 30th wind velocity was 23 miles an hour; on the 31st it was 21 miles an hour, on 1st August it had fallen to 12 miles, but on the 2nd it rose to 30 miles an hour, thus showing that a very strong monsoon current was passing over the province. Practically speaking, a strong monsoon has been blowing over the province for the whole of the week, and the only change in these meteorological conditions which has to be registered is the alternate preponderance of one or other of the two branches of the monsoon current. At the commencement of the week the westerly element in the wind directions, that is, the Bombay current derived from the Arabian Sea, was gradually strengthening, and this continued on the 30th and 31st of July. On 1st August, however, the south-easterly and easterly winds from the Bay of Bengal commenced to increase in strength, and gradually drove back the westerly winds, and at the point where the two currents met, there was a slight, but distinct, cyclonic circulation set up, which continued on the 2nd. On the 3rd of August the Bombay current again strengthened, and drove back the easterly winds, and this continued up till the close of the week. Owing to the interaction of these two wind currents, conditions generally have been decidedly favourable to rainfall over the whole province, and practically the whole of the Province of Bengal has received a rainfall in excess of the normal. The week has thus been characterised by very simple meteorological conditions, and for almost the first time during the present monsoon season, conditions have been nearly normal for general rainfall, and the province has been free from such abnormal conditions as the formation and passage of barometric depressions.

Pressure.—The changes of pressure, which have occurred during the present week, are of small importance. They have consisted merely of the usual oscillating movements which always occur even when the atmosphere is in a normal condition, and thus on the 30th of July pressure was rising slowly, and on 31st July and 1st August the rise was succeeded by a slow fall. Pressure again increased on the 2nd and fell on the 3rd and 4th, and on the 5th it was again rising. These changes have therefore not produced any very material alteration in the pressure distribution, and pressure has been above the normal by small amounts in all districts, the general excess being about 0.03" to 0.05". The largest excess pressures are, however, recorded usually in Orissa and South-West Bengal, and at Falc Point the average excess for the week equals 0.069" and at Calcutta 0.057". In Assam pressure has been above the normal by amounts which average about 0.02" to 0.03".

Temperature.—The variations of temperature from day to day have been of comparatively little importance; but owing to the heaviness of the rainfall, temperature has generally been decidedly lower than the normal in most districts. The only district where this has not been the case is Orissa, which shows a temperature no less than 1.4° in excess of the normal, but in this district rainfall has been comparatively light during the week. In all other districts temperature has been below the normal by amounts varying from 0.2° in East Bengal to 1.5° in Behar. The mean temperature of the whole Province of Bengal for the week has been 0.7° in defect of the normal. In Assam also temperature has been in defect of the normal by 0.8°.

Rainfall.—Has been fairly general throughout the week, and in most districts falls have occurred on from five to six days out of the seven. South-West Bengal, however, has only received rain on an average of 4.4 days, and in Orissa the number of rainy days has only been three. The falls which have been received have also been heavy: thus in North Bengal the average fall is about five and a half inches; in East Bengal it has exceeded five inches, and in South-West Bengal, South Behar, and Chutia Nagpur the falls have averaged between 4 and 5 inches. In North Behar the fall has been rather less than three inches, and in Orissa it has been less than one-and-a-half inches. Expressed as a percentage of the normal fall for the week, the actual average amounts received in each meteorological district become—Orissa 48 per cent., South-West Bengal 136 per cent., East Bengal 121 per cent., North Bengal 182 per cent., North Behar 119 per cent., South Behar 173 per cent., and Chutia Nagpur 130 per cent., or, taking each of these meteorological districts as having an equal value in the calculation, the actual fall over the whole province during the week has equalled 130 per cent. of the normal for the period.

Taking up the rainfall rather more in detail, the following districts have received extremely large excess falls during the week:—in South-West Bengal, Bankoorah, Burdwan and Ranigunge; in North Bengal, Dinagepore, Rungpore, and Julpigoree; in Behar, Chupra, Buxar, Déhree, Gya, Bankipore, Bhagnulpore and Nya Doonka; and in Chutia Nagpur, Lohardugga and Hazaribagh. On the other hand the following districts have received comparatively small falls:—Pooree, Cuttack, Furreedpore, Dacca, Maldah and Motihari.

In Assam the following amounts of rain have been received during the week :—Sibsagar 3·9 inches, Dhubri 4·79 inches, and Silchar 4·78 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 5th of August 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.

METEOROLOGICAL OFFICE, BENGAL :
The 9th August, 1887.

A. PEDLER,
Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of the Thermometric Observations taken at the Meteorological Office, Chowringhee, in the month of July 1887.

The mean temperature during the month	82.3	Date.
The highest temperature during the month	93.4	1st
The lowest temperature during the month	76.0	10th
The range of temperature during the month	17.4	
The mean daily range of temperature during the month	10.9	
The greatest range of temperature in one day during the month	14.6	16th
The mean humidity during the month	90	%
The mean vapour tension during the month	980	Inches.
The total rainfall of the month	18.39	
The greatest fall in 24 hours	5.93	10th
The number of rainy days in the month	26	days

A. PEDLER,

For Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA ;

Calcutta, the 8th August 1887.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 31st July to 6th August 1887.

The mean temperature of the seven days

The extreme variation of temperature

The maximum temperature

The mean relative humidity

The total fall of rain from 31st July to 6th August 1887

The mean temperature and humidity are obtained by applying to the mean of the 10th, 16th, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;

The 8th August 1887.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE number of deaths recorded during the month of March 1887, in the districts of Bengal under registration, amounted to 105,767 among a population of 66,163,884, yielding a death-rate of 19.08 per 1,000, as opposed to 18.36 per 1,000 during the preceding month, and 18.48 per 1,000 during the corresponding month of the past year.

2. The following districts returned the highest proportions of deaths:—

Districts.		Ratio per mille.	Districts.		Ratio per mille.
Backergunge	...	39.00	Rungpore	...	27.96
Puri	...	35.40	Birbhum	...	27.36
Jalpaiguri	...	33.84	Balasore	...	25.80
Dinajpur	...	29.64			

3. In comparison with the mortality during the corresponding month of the preceding year, the death-rates from small-pox, fever and the maladies coming under the head of "Other Causes" presented no noticeable differences, and those from cholera, bowel-complaints and injury were stationary.

				Ratio per mille during—	
				March 1887.	March 1886.
Cholera	1.56	1.56
Small-pox08	.10
Fever	13.56	13.44
Bowel-complaints72	.72
Injury31	.24
Other causes	2.76	2.28

4. The undermentioned districts suffered pre-eminently from cholera, fever and the maladies classed under the head of "Other causes," the rest of the diseases (indicated in the above table) manifesting no noticeable exacerbations.

Cholera.		Fever.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Backergunge	13.80	Jalpaiguri	30.12	Puri	18.36
Puri	7.44	Dinajpur	27.84		
24-Pergunnahs	5.64	Rungpore	26.28		
Balasore	5.64	Rajshahye	21.96		
Khulna	3.72	Pubna	21.48		
Tipperah	2.52				
Cuttack	2.52				
Maldah	2.40				
Howrah	2.28				
Murshidabad	2.28				

5. In relation to *Sex*, *Class* and *Age*, the death-rates during the month under notice stood as follows:—

According to Sex.

	Ratio per mille.
Males	21.24
Females	17.04
Ratio of male deaths to every 100 female deaths	122

According to Class.

	Ratio per mille.
Christians	14.76
Hindus	18.60
Mahomedans	20.28
Budhists	15.00
Other classes	18.60

According to Age.

	Ratio per mille.
Under 1 year	118.80
1 and under 5 years	18.84
5 " " 10 "	8.64
10 " " 20 "	7.92
20 " " 30 "	12.24
30 " " 40 "	18.20
40 " " 50 "	15.96
50 " " 60 "	20.76
60 years and upwards	30.00
	47.52

The 8th August 1887.

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

MORTALITY ACCORDING TO--

[illegible]

MORTALITY ACCORDING TO-

[illegible]

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

R. LIDDERDALE, M.D.,

MEMORANDUM.

THE returns from the principal Municipalities in Bengal, for the week ending 23rd July 1887, disclose the following results :—

1. That the birth-rate in these Municipalities stood at 16·5 per 1,000 of population, against the same proportion in the preceding week ending 16th July, and the death-rate at 29·2 against 28 per 1,000, indicating improvement in the registration of the events.

2. That the highest proportion of births was returned from the Comillah Municipality, viz., at the rate of 38·5 per 1,000 of population, and of deaths from the following Municipalities :—

Deaths.			Deaths.		
		Ratio per mille.			Ratio per mille.
Puri	...	79·7	Bhagulpore	...	42·5
Gya	...	77·2	Patna	...	38·2
Arrah	...	68·2	Suburbs of Calcutta	...	32·9

3. That, as compared with the results of the preceding week, there was a noticeable enhancement of mortality from fever, and only fractional differences in the casualty-rates from the rest of the death-causes, injury presenting no variation :—

				Ratio per mille during the weeks ending—	
				23rd July 1887.	16th July 1887.
Cholera	7·4	7·1
Small-pox	·1	·2
Fever	10·3	8·9
Bowel-complaints	3·5	3·3
Injury	·3	·3
Other causes	7·5	8·1

4. That the following Municipalities returned conspicuously high mortality from cholera and the maladies coming under the head of "Other causes," and no Municipality exhibited any noticeably high suffering from the other diseases mentioned in the foregoing table, excepting Puri, where 14·7 per 1,000 of the population died from bowel-complaints :—

Cholera.			Other causes.		
		Ratio per mille.			Ratio per mille.
Puri	...	44·1	Gya	...	26·0
Arrah	...	41·9	Bhagulpore	...	16·2
Gya	...	28·7			
Bhagulpore	...	12·7			
Patna	...	11·0			
Chupra	...	10·7			
Suburbs of Calcutta	...	4·8			

5. That the mortality referable to Sex, Class and Age, stood as follows :—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	28·2	Christians	43·5	Under 1 year	195·5
Females	30·3	Hindus	31·0	1 and under 5 years	58·8
Ratio of male deaths to every 100 female deaths	105	Mahomedans	24·8	5 " " 10 "	19·0
				10 " " 15 "	13·1
				15 " " 20 "	21·9
				20 " " 30 "	14·2
				30 " " 40 "	15·5
				40 " " 50 "	17·8
				50 " " 60 "	34·4
				60 years and upwards	80·8

R. LIDDERDALE, M.D., Deputy Surgeon-General,

Sanitary Commissioner for Bengal.

The 8th August 1887.

PROGRESS OF THE EDEN SANITARIUM, DARJEELING.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 9th August 1887.

RESOLUTION.

READ—

The Report on the working of the Eden Sanitarium, Darjeeling, for the year 1886, and the reports for the three previous years.

The Eden Sanitarium had its origin in the following note recorded by Sir Ashley Eden, Lieutenant-Governor of Bengal, on 11th June 1881 :—

Now that the Tramway has been brought into Darjeeling, and that the Sanitarium is placed in direct and easy communication with Calcutta and with most of the civil stations of Bengal, and now that tea-planters from the unhealthy Dooars and the Terai can reach this station easily and without exposure in a few hours, the question of providing a good, well-organized European hospital for the comfortable reception of patients and convalescents from the plains, forces itself upon the consideration of Government.

I have already received representations regarding hospital accommodation for sick persons and convalescents connected with the Eastern Bengal Railway, the Northern Bengal Railway, and the Darjeeling Tramway; and it appears that if nothing else be done, some arrangement must at once be made, in communication with the Managers of those lines, for supplying a great and growing need of this sort. But as Darjeeling increases—and it is now increasing daily—we shall have to provide hospital accommodation for the permanent residents of the station and district. There are the tea-planters and their assistants scattered about all over the district, some of them placed in very unhealthy situations. Cases in which young men are brought in suffering from fever of a severe type for medical attendance are very common, and a difficulty is frequently found in providing them with accommodation during their illness. The hotels and boarding-houses are generally full, and a sick person is not always a welcome inmate in a public establishment of that sort; and it is feared that many useful men have

lost their lives in the Dooars and the Terai, who would at once have come up for treatment if a comfortable hospital existed for their reception. Then, again, there are many cases of persons residing in outlying plantations, who desire attendance during their confinement, who can only obtain it at an enormous expense, altogether beyond their means, and who are not within reach of the Civil Surgeon, and cases are not unknown in which it has been found impossible to procure accommodation for such cases here on any terms.

But besides these there are frequent cases in the mofussil stations of persons pulled down after severe sickness or suffering from obstinate disease, who are unable to take the change to sea which richer persons could afford, but for whom a change and careful medical attendance are absolutely necessary. There are also persons who could undergo operations in the cool climate of the hills, which they could not bear in the heat of the plains. Lastly, there are patients convalescing in the Calcutta hospitals, to whom a change to a convalescent ward in Darjeeling would be of the utmost importance.

It therefore seems to me that as a European hospital has to be built, we should not keep in mind only the requirements of Darjeeling, but of the province generally. It will in the long run be a saving to Government if a number of its servants can be sent up here for a few weeks' treatment in a European climate, instead of having to take leave to Europe or to linger on in a condition of inefficiency from ill-health at stations in the plains.

The experiment of paying wards for first-class patients has been tried on a small scale in Darjeeling, as also in Calcutta, and with the greatest promise of success.

I think that the best plan of dealing with the matter will be by appointing a Committee to consider the whole subject—the site, the classes and quantity of accommodation, the rate of charges, the mode of admission, etc., etc.

I accordingly appoint the following gentlemen to be members of a Committee for this purpose:—

The Hon'ble A. Mackenzie, *President*.
Colonel Trevor.
The Deputy Commissioner of Darjeeling.
Mr. Martin.
Dr. Birch.
Mr. Christie.

They should consult the present Hospital Committee, who have already given the subject their attention.

There are several sites which suggest themselves—

1. Vale Pleasant, which could at once be made available for the purpose. It has every advantage except that the houses are entirely out of repair. It has a bright look-out, and is near the Mall. There are three houses; one has seven rooms with ample bath-room accommodation, which could be made into a hospital for paying-patients of the first class.

Then there is one large ward in a separate building which would do for patients of the third class, who would be inmates of a general ward. It is airy, light, and has a teak-boarded floor; it would hold probably 14 or 16 beds at least. There is a row of little separate rooms attached to this, which would be very comfortable for second-class patients. And there is the Retreat, a very comfortable four-roomed cottage, which would be available for special cases requiring quiet, such as midwifery or operations.

This site, with the buildings, is, I believe, valued at Rs. 10,000, and I should be glad to transfer it to the Hospital Committee, and to make a grant towards its repair. Some of the buildings would require a new roofing, and a good deal is required in the way of repairs. Proper servants' quarters are required, and a room for the hospital assistant would also be necessary. But after inspecting the buildings, I am afraid that they are so much out of repair that practically they would have to be rebuilt; and if this is to be done, the money will be better spent in constructing an entirely new hospital, on the most improved principle, than in repairing and adapting old buildings—never a satisfactory process.

2. Then there is the Bhootea School site. A magnificent site might be secured by pulling down the old Post Office, now used as a Bhootea School, and cutting down the hill 12 or 14 feet. Upon this site a really good two-storied hospital might be constructed, capable of providing between 50 and 60 beds. Of these, about 15 or 16 probably should be separate rooms for Government officers and other first-class patients, 20 might be for second-class, and 20 for third-class patients.

3. Then there is the site at the back, or at the south, of the Bengal Office; but this is perhaps bringing the hospital too much into the station.

4. There is a Government site at Lowland's Place; but this is perhaps too far down the hill and is not very accessible; otherwise it is a very fine site.

I have indicated above the various classes which would probably have to be accommodated. I should say that—

First-class patients should pay Rs. 2 a day, making their own arrangements for diet.

Second-class patients should be men and the families of men drawing, say, less than Rs. 300 a month in salary, or an equivalent income from other sources. The charge for them might be Rs. 3 a day including diet. They should have a ward to themselves, or rather two wards—one for males, the other for females.

Third-class patients should be men of official or other incomes of less than Rs. 100 a month. They should pay probably Rs. 1-4 a day including diet, on the scale of the General Hospital. They must be inmates of the general ward set apart for their sex.

When patients of the third class are servants of a State or Guaranteed Railway, or public company or of a public department, they should be received only on a guarantee that their cost at the fixed rate per diem will be paid or recovered by their employers or the head of the department, who will make arrangements for recovering it when necessary from the patient. Where convalescents of the third class are sent up from Calcutta by the public hospitals, the hospitals must be responsible for their fees here.

I leave, however, the rate of fee to be settled by the Committee, but have merely suggested these rates for their guidance.

It seems to me to be of great importance to give the scheme an *immediate* trial, and I am therefore willing to make a grant of Rs. 2,000, which should enable the Hospital Committee to adapt the whole of the Police Hospital at once for the reception of European patients. The Executive Engineer could arrange for accommodating the few police patients there are elsewhere.

A proper establishment would have to be provided and eventually paid for by the Hospital Committee. I think a good English nurse or matron essential. A trustworthy woman could probably be induced to take the place in this climate on very favourable terms. If no one is available locally, the Ladies' Committee at Calcutta might find some one suited to the place. I do not wish the hospital to be a charity hospital. It should pay its expenses, the building having been once provided and equipped. I am disposed to give a grant from Provincial Services of Rs. 50,000 to Rs. 60,000 for the purpose of establishing the hospital provided such a hospital is erected as shall afford accommodation to invalids from all parts of the Lower Provinces. For a merely local hospital, or for accommodation for the railway servants, I could not sanction more than half the amount. I gather from the Civil Surgeon that he thinks a considerable sum might be raised from subscription for such a useful purpose as this. The fees should be so fixed that they afford a reasonable prospect of the hospital covering its expenses. Five or six first-class, five second-class, and twelve or fourteen third-class patients ought to cover every expense.

After the report of the Committee had been considered, the following Resolution was issued under Sir Ashley Eden's orders:—

In the note which is appended to this Resolution, the Lieutenant-Governor stated his reasons for thinking that Government should take measures to provide a European

* Hon'ble A. Mackenzie, *President*.
Colonel Trevor, *R. S.*
The Deputy Commissioner of Dar-
jeeling:
Mr. Martin, Superintending Engineer.
Dr. Birch, Civil Surgeon.
Mr. Christie, Executive Engineer.

hospital at Darjeeling for the reception of patients and convalescents from the plains, and appointed a Committee * to examine the subject, and to submit proposals for carrying the scheme into effect. The Lieutenant-Governor expressed his willingness to make a grant from Provincial Services of Rs. 50,000 to Rs. 60,000 for the establishment of such a

hospital as would afford accommodation to invalids from all parts of the Lower Provinces.

2. The Committee, after careful consideration of the different sites available, recommended that the site of the Bhooteah School should be adopted. They have considered a rough plan of a two-storied hospital to accommodate 16 first class, 20 second-class, and 20 third class patients at an estimated cost of about Rs. 52,000, and they propose that the plans and estimates should be completed by the Public Works Department for submission to the Lieutenant-Governor. They are of opinion that little difficulty would be found in raising public subscriptions to provide for the equipment of the hospital and the maintenance of the poorer classes of patients, and they recommend that measures should be taken to ascertain what assistance may be expected from the public.

3. The Lieutenant-Governor approves the suggestions put forward in the Committee's report. The Public Works Department will be requested to take measures at once to level the Bhooteah School site, demolishing the old buildings and cutting down the hill so as to secure sufficient space for a substantial structure of the dimensions proposed. Plans and estimates of the work should be prepared with as little delay as possible, and as soon as they have been approved by the Lieutenant-Governor, a special grant will be made of the amount required for the construction of the building. Meanwhile a grant of Rs. 2,000 is sanctioned to admit of the Police Hospital being at once adapted for the reception of European patients, so that accommodation may be available during the current season.

4. The Commissioner of the Division will be desired to submit suggestions regarding the constitution of the governing body of the new institution. It is necessary that a Committee should at once be formed with authority to receive subscriptions. The Committee will also have to consider various questions connected with the administration of the hospital, and to submit, for the approval of Government, a scheme for its general management. As recommended in paragraph 8 of the Committee's report, the Chamber of Commerce, Calcutta, the Trades' Association, and the Agents of the East Indian and Eastern Bengal Railways, will be invited to say to what extent the Committee may expect donations for furniture now, and subscriptions for other purposes hereafter. The Surgeon General will be requested to ascertain to what extent advantage would probably be taken of the hospital by the different classes of patients, and to offer suggestions regarding the system under which the officers in charge of the metropolitan hospitals should be authorized to transfer patients to the Darjeeling Hospital.

2. A Committee of Management was subsequently appointed, and the building was commenced in November 1881, but owing to the delay on the part of the contractors, it was not ready for occupation till the 22nd April 1883, when it was formally thrown open to the public. Meanwhile a temporary hospital was opened in a building adjoining the municipal dispensary at Darjeeling, partly at the cost of Government and partly from funds raised by private subscription, and from the proceeds of a bazar held in Darjeeling during the Doorga Poojah holidays of 1880. The accommodation provided in the temporary hospital was of a very limited character, but so great was the demand for it that the public appreciation of such an institution was placed beyond doubt.

3. On the opening of the Sanitarium, several patients were transferred to it from the temporary hospital, which was then closed, and their number was largely added to by patients and convalescents from the plains, who were only awaiting the opening of the Sanitarium. The Sanitarium being an institution where only paying patients are received, and being, therefore, unlike any ordinary hospital, the rules of the institution are of a special character. A liberal provision in the rules is that in all cases where this is desired, a relative or attendant is admitted with the patient, and no restriction is put upon the stay of such relative or attendant.

4. The following statement shows the number of patients and their relatives and attendants admitted into the Sanitarium during the past four years :—

		1883.	1884.	1885.	1886.
Patients	...	88	153	192	273
Relatives and attendants	...	33	73	68	120
Total	...	121	226	260	393

Infants in arms, of whom several have been admitted, are not included in the above figures. The steady increase in the number of admissions is an indication of the growing popularity of the institution, and it is hoped that as the benefits which it is capable of conferring on invalids become generally known, it will be more largely resorted to. Patients come to the Sanitarium not only from all parts of the Lower Provinces of Bengal, but from Assam, the North-Western Provinces, Burmah, and the Straits Settlements.

5. Experience having shown that the Sanitarium is only required by the public from about the beginning of March to the end of November, this period has been constituted the working season of the institution. During the winter months, December, January, and February, the Sanitarium is practically closed to the public, and with the view to economy the establishment is reduced to a minimum. Admission is, however, not denied to patients at this season, and as a matter of fact there have been on an average three patients in the Sanitarium during the winter months in each of the past three years.

6. The daily average number of persons in the Sanitarium during the working season was 18·54 in 1883, 25·87 in 1884, 38·22 in 1885, and 28·96 in 1886. These figures vary according to the length of stay of the patients. Thus it is that though the total number of admissions in 1885 was less than in 1886, the daily average was greater. The average stay of each patient in the Sanitarium was 39·2 days in 1883, 31·20 days in 1884, 28·04 days in 1885, and 20·26 days in 1886. The average, though gradually lessened since 1883, is still high in comparison with the average stay of patients in hospitals in the plains. This, as explained by the Committee of Management, will always be the case, as the Sanitarium is more apt to get chronic cases such as phthisis, paralysis, general debility and anæmia, which require a lengthened stay in a good climate before any real improvement is effected. Many cases of phthisis have been treated at the Sanitarium, and in nearly every instance great benefit has been derived by the patients. Experience has shown that the climate of Darjeeling is specially suited to persons suffering from this complaint.

7. The following statement shows the number of patients treated at the Sanitarium during the last four years and the results :—

YEAR.	PATIENTS TREATED.			Total.	Cured.	Relieved or improved.	Discharged or otherwise.	Died.	REMARKS.
	Male.	Female.	Children.						
1883	50	26	13	89	72	7	5	3	* Three of these were cases admitted in a moribund state.
1884	76	53	23	152	112	30	5	5*	
1885	108	55	28	191	132	44	5	3*	
1886	129	57	57	243	230	42	5	0	

This shows at a glance the benefit derived from the treatment at the Sanitarium. It speaks well for the institution that the average mortality has been only six in a year.

8. Of the three classes in the Sanitarium, the second is the most popular, judged from the results of the past four years, which are exhibited in the following table:—

YEAR.				1st class.	2nd class.	3rd class.
1883	44	41	37
1884	53	107	66
1885	24	107	69
1886	83	229	81

9. The Sanitarium is under the superintendence of the Civil Surgeon of Darjeeling, who is *ex officio* a member of, and Secretary to, the Committee of Management. The several officers who have occupied this position since the opening of the Sanitarium have performed their work with zeal and ability, and have done much to promote the welfare of the institution. The Resident Medical Officer, Mr. J. G. Fleming, who has been connected with the institution since April 1883, is spoken of by the Committee in the highest possible terms. He has conducted the duties of his post with considerable skill and tact, and the success of the Sanitarium has been greatly due to the confidence which his presence has inspired in the patients.

10. By an arrangement made with the Sister Superior of the Lady Canning Home in Calcutta, two sisters of the Clewer community are attached to the Sanitarium during the working season in order to superintend the nursing and other domestic arrangements, in place of a matron. For want of funds the Committee have not yet been able to provide a permanent staff of under nurses for the Sanitarium, but nurses are engaged temporarily to attend any bad cases that may require special care. The services rendered by the sisters have invariably been acknowledged by the Committee in terms of approval and satisfaction.

11. The cost of the construction of the Sanitarium was borne by the Government of Bengal. The original estimate was for Rs. 1,30,000, but owing to certain necessary changes and additions it was increased to Rs. 1,67,752. Besides this, Government has provided the institution with surgical instruments, and for two years relieved it of all charge on account of European medicines. The general equipment and furnishing of the building was entrusted to the Committee of Management, and for the purpose of meeting the cost an appeal was made to the public to provide the necessary funds. This appeal was liberally responded to, and a sum of Rs. 23,750 was collected, nearly all of which was expended in the purchase of furniture. The Sanitarium is supported entirely by the receipts from the patients and by voluntary contributions. The financial position of the institution at the close of the year 1886 is shown in the following statements:—

It is a matter for regret that the subscriptions from firms and private individuals should show so considerable a falling off in the last two years, more especially as the want of funds is reported to have rendered it impossible for the Committee of Management to make any payment to the Superintendent, Dr. Mathew, for the very efficient services rendered by him during the past year, or even to discharge fully their liability to his predecessor.

13. The thanks of Government are due to the successive Committees of Management and Superintendents who have contributed to place the institution on a footing of such efficiency, and to merit for it so large a share of the public confidence.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Government of Bengal.

LIBERALITY OF BABOO BRIJ BEHARI LAL OF DURBHUNGAH.

MUNICIPAL DEPARTMENT—MUNICIPAL.

Calcutta, the 16th August 1887.

RESOLUTION.

READ—

A letter from the Commissioner of the Patna Division, No. 4093, dated the 29th July 1887, forwarding a letter from the Collector of Durbhungah.

With the view of commemorating the visit of His Honour the Lieutenant-Governor to Durbhungah, Baboo Brij Behari Lal has contributed a sum of Rs. 5,000 to the cost of a complete survey of the town for the purpose of a scheme of drainage. The Lieutenant-Governor is pleased to accept the gift on behalf of the Durbhungah Municipality, and tenders his thanks to Baboo Brij Behari Lal for his liberality and public spirit.

ORDER.—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Commissioner of Patna for information and for communication to the donor.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 13th August 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at late.
BENGAL.			
<i>Western Districts</i>			
BURDWAN DIV.	1 Burdwan, Aug. 13, '87	3.06	Weather—seasonable with break in rains at end of week. State of crops favourable. Price of common rice falling, about 21 to 22 seers per rupee. Cholera in three thanas in the Sudder sub-division.
	Culna ...	2.51	
	Cutwa ...	2.62	
	Raneegunge ...	5.17	
	2 Bankura „ 13, '87	3.10	Weather—seasonable. Transplantation of <i>aman</i> still going on. Prospects of <i>bhadoi</i> and other standing crops good. Common rice now selling at the Bankura market at 24 seers per rupee. Public health good.
	Bishnupore ...	6.44	
	3 Beerbhoom „ 13, „	2.95	Weather—cool and showery with intervals of sunshine. It is very favourable to crops on the ground. Paddy seedlings look healthy and sugarcane flourishing. Some damage has been done by floods in the south-eastern portions of the district; whence, too, cholera is also reported. Public health generally good. Prices stationary.
	Rampore Haut ...	3.57	
	4 Midnapore „ 13 '87	2.37	Weather—dry and sultry with intervals of heavy rain. Flood in Ghatal subsiding gradually. Crops damaged in the flooded parts in Ghatal and Tunlook. Some deaths from cholera reported from Ghatal.
	5 Hooghly „ 13, „	0.94	Weather—seasonable, but drier than usual. Prospects of all crops are favourable so far. Public health good for the time of year.
PRESIDENCY DIV.	Serampur „ ...	2.18	
	Jehanabad „ ...	0.68	
	Howrah „ 13, „	3.08	Weather—cool with rain almost daily, though not heavy. Ploughing and transplanting continue. Prospects good.
	Oooloobish „ ...	0.53	
	<i>Central Districts</i>		
	6 24-Pergha, Aug. 13, '87	2.50	Weather—seasonable with occasional showers. Rainfall insufficient. Prospects of <i>aus</i> , jute and sugarcane good, but more rain required for <i>aman</i> crop. Public health good, but a few cases of cholera and fever reported.
	7 Nuddea „ 13, „	0.94	Weather—cloudy, but with more sun and less rain than last week. Transplantation of <i>aman</i> in progress. Prospects fair. Flood level very high for the time of year, and inundation anticipated.
	Kushtea „ ...	4.79	
	Ranaghat „ 13, '87	1.28	Weather—first part of the week cloudy and showery, latter part bright. Prospects of <i>aman</i> and <i>aus</i> paddy good. Public health favourable.
	8 Khoolna „ 13, '87	2.46	Weather—hot with occasional showers. Prospects of <i>aus</i> good. Transplanting of <i>aman</i> going on, but rain is still wanted. Public health fair.
RAJSHAHY DIV.	9 Jessore „ 13, „	3.73	
	Jhenidah „ ...	4.85	
	Magurah „ ...	0.83	
	Narail „ ...	2.66	
	Bongong „ ...	2.5	
	10 Moorshedabad „ 13 '87	5.66	Weather—very hot; rain at intervals. Transplantation of <i>aman</i> paddy still going on. <i>Til</i> , sugarcane and jute progressing. Public health good.
	Juagipur „ ...	5.20	
	11 Dinagopore „ 13, '87	6.74	Weather—close and cloudy. <i>Bhadoi</i> harvest in progress. Transplanting of <i>haimanti</i> paddy much benefited by rain.
	12 Rajshahy „ 13, '87	2.79	Weather—dry. Cutting of <i>aus</i> paddy continues. Condition of <i>haimanti</i> rice and jute generally good. Public health fair.
	Nattore „ ...	5.14	
RAJSHAHY DIV.	13 Rangpur „ 13, „	8.29	Weather—cool. Transplantation of <i>aman</i> going on. Recent rain has done good to this crop. <i>Aus</i> and jute are being cut. Public health continues fair in all sub-divisions, but in the head-quarters fever prevails.
	Gaibanda „ ...	2.17	
	Ulipur „ ...	8.61	
	Kurigram „ ...	9.54	
	14 Bogra „ 13, '87	1.80	Weather—somewhat dry for this time of the year. State and prospects of standing crops on the whole satisfactory. Public health fair.
	Sherpur „ ...	0.69	
	Nowkhilla „ ...	1.60	
	15 Pubna „ 13, '87	1.97	Weather—seasonable. Harvesting of <i>aus</i> commenced; an average crop expected. Rivers rising rapidly. Prospects of jute, sugarcane and <i>aman</i> paddy good.
	Perajung „ ...	1.06	
	16 Daryeeh „ 13, '87	13.43	Heavy rain; weather cloudy and cool. State and prospects of crops good.
DAKKA DIVISION.	17 Jalpore „ 13 „	7.13	Weather—seasonable. Autumn rice and jute promise fairly well.
	<i>Eastern Districts.</i>		
	18 Dacca, Aug. 13, '87	1.22	Weather—first part of week cloudy, latter part fine. Jute and <i>aus</i> paddy are being harvested. <i>Aman</i> paddy thriving. Rivers rising again. Prospects on the whole continue good. Public health good.
	Manickgunge „ ...	5.27	
	Munshigunge „ ...	2.26	
	19 Furreedpore „ 13, '87	1.35	Weather—hot and cloudy. River has risen. Prospects of standing crops fair. General health good.
	Goalundo „ ...	2.49	
	Madaripore „ ...	0.83	
	20 Backergunge „ 12, '87	1.92	Weather—hot and rainy. Prospects of crops good. Cultivation of <i>aman</i> going on. General health good.
	21 Mymensingh „ 12, '87	2.80	River again rising. State and prospects of crops good.
	Jamalpur „ ...	9.73	
	Kishoregunge „ ...	5.71	
	Attea „ ...	3.71	
	Netrokona „ ...	3.42	

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and progress of the crops, and state of health at date.
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong, Aug. 16, '87	0.26	Weather—seasonable. Outturn of <i>aus</i> expected eight annas. <i>Aus</i> being transplanted. Prices stationary. Public health fair. Cholera still reported.
	23 Noakhali, " 12, "	10.95	Weather—seasonable. Reaping of <i>aus</i> continues. Transplantation of <i>aus</i> progressing. Prospects good. Public health very fair.
	24 Tipperah, " 11, '87	9.43	Weather—seasonable. Prospects of crops favourable. Transplantation of <i>aus</i> progressing well. Jute and <i>aus</i> have been reaped to the extent of about 12 annas. Public health good.
	Brahmanbariah, " "	4.89	
	Chandpur, " "	5.13	
CHITTAGONG HILL TRACTS.	25 Chittagong Hill Tracts, " 9, '87	3.95	Weather—rainy throughout the week with occasional sunshine. <i>Joom</i> paddy doing well. Transplanting of plough-paddy still in progress. Fever prevalent.
	Hill Tipperah, " 10, "	4.72	Weather—hot; more rain wanted. Transplantation of <i>aus</i> paddy still continues. Prospects of sugarcane and <i>joom</i> crops fair. Some cases of fever here and there; public health otherwise good.
BEHAR.			
PATNA DIV.	26 Patna, Aug. 13, '87	1.29	Weather—cloudy and rainy. Paddy transplantation going on. <i>Bhadai</i> crops promising. In some places <i>makai</i> is being reaped. Cholera still continues in the Behar sub-division, and has increased in the Dinapore sub-division; a few cases reported from other parts.
	Barh, " "	1.80	
	Dinapore, " "	3.49	
	27 Gya, " 13, "	6.64	Weather—cloudy. Prospect of <i>bhadai</i> and paddy crops good. Cholera still in most of the thanas. Fever also reported.
	28 Shahabad, " 13, "	1.92	Weather—cloudy and rainy almost the whole week with occasional breaks. Paddy transplantation actively going on, rain having very much facilitated the operation. <i>Bhadai</i> crops looking well, and prospects are satisfactory. Cholera greatly decreased. Prices continue stationary, tending to fall.
	Buxar, " "	4.00	
	Sasaram, " "	0.80	
	Bhabuah, " "	2.85	
	29 Darbhanga, " 13, "	7.35	Weather—cloudy. There has now been sufficient rain, and transplantation of paddy is progressing rapidly. <i>Bhadai</i> crops continue very favourable. Prices remain stationary. Public health generally good.
	Madhubani, " "	7.15	
BEHAR DIV.	Tajpur, " "	4.31	
	30 Monrotpore, " 13, '87	4.23	Weather—cloudy and rainy. Rain beneficial to the crops. Maize, <i>kodo</i> , <i>marua</i> , <i>sama</i> , <i>kauni</i> , &c., in ear. Cholera still reported from the interior. Rivers rising.
	Hajipur, " "	0.76	
	Sitamarhi, " "	8.82	
	31 Saran, " 13, "	1.79	Weather—cloudy and rainy. Prospects of crops improved. Cholera still reported.
	Sewan, " "	3.14	
	Gopalgunge, " "	5.43	
	32 Chhapra, " 13, "	5.36	Weather—cloudy and rainy. Bright sunshine at intervals. Rain has much improved prospects of crops. Transplantation of paddy going on vigorously. <i>Bhadai</i> rice is being harvested in Bettiah sub-division. Fever and cholera prevalent in the district. Prices rising.
	Bettiah, " "	4.35	
	33 Monghyr, Aug. 13, '87	3.13	Weather—seasonable. Transplanting of winter rice still going on. <i>Bhadai</i> crops ripening. Cholera abating.
BEHAR DIV.	Begusarai, " "	7.27	
	Jamui, " "	3.96	
	34 Bhagalpore, " 13, "	3.10	Weather—seasonable. Transplantation of late rice is being pushed to completion. Outturn of <i>makai</i> poor. Prospects of <i>marua</i> and early rice very fair. Cholera decreasing.
	35 Purneah, " 13, "	4.98	Several heavy showers. Rain has done much good. Crops have recovered and transplanting going on rapidly.
	Kishengunge, " "	6.55	
	Arrareah, " "	6.54	
	36 Maldah, " 13, "	2.36	Weather—seasonable. Harvesting of <i>bhadai</i> paddy has begun, with good outturn, except in thanas Ratna and Kharin, where it is reported to be 12 and 14 annas respectively. Transplantation of winter paddy going on. Common rice sowing at 21 seers per rupee. Public health good.
	Chunchal, " "	2.94	
	Shibgunge, " "	2.81	
	37 Sonthal Pargna, " 13, "	3.00	Weather—seasonable. <i>Bhadai</i> crops ripening. Prospects fair except in Rajmahal, where only 8-anna crop expected. Late rain has helped transplanting of paddy on the high lands.
BEHAR DIV.	Godda, " "	3.97	
	Rajmahal, " "	3.52	
ORISSA.			
ORISSA DIV.	38 Cuttack, " 12, '87	2.41	Weather—fair. <i>Biali</i> rice in ear, and in some places ripening. <i>Sarad</i> rice is being sown and doing well. Price of rice almost unchanged. Common rice 16½ to 18 seers per rupee in town. Public health generally good; cases of cholera still reported from all sides.
	39 Poores, Aug. 11, "	1.40	Weather—cloudy with occasional showers. State and prospects of crops not good and very backward. Transplantation of <i>sarad</i> crop going on. Common rice 21 seers 6 chittacks per rupee in the Sudder sub-division, and 21 seers 13 chittacks in the Khoorda sub-division. Cases of cholera reported from most parts of the district.
	Khoorda, " "	2.01	
ORISSA DIV.	40 Balasore, " 12, "	0.25	Weather—hotter than previous week. Prospects of crops good. <i>Biali</i> in ear. A few cases of cholera reported from north; public health otherwise good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hasaribagh, Aug. 13, '87	4.28	Incessant rain. Transplanting of rice still going on. All crops doing well and prospects very favourable so far. Cases of cholera still continue to be reported from several thanas.
42	Lohardigha, " 13, "	4.40	Weather—seasonable. Transplanting of rice still continues; prospects good. Prices easy. Cholera abating in Palamow, otherwise general health good.
43	Palamow, " "	4.05	
44	Singbhum, " 12, "	7.41	Heavy rain throughout district; weather cool. Prospects excellent. Public health generally good.
45	Manbhum, " 13, "	3.59	Weather—seasonable. Rain has fallen where needed and transplanting is nearly finished. Prospects of paddy so far good, and those of the autumn crops excellent. Public health good.
46	Govindpore, " "	3.67

The average fall of the corresponding period for 24 years, S. G.'s Office	2.84
The total fall from 1st January to 13th August 1887	41.16
The average fall of the corresponding period for 24 years, S. G.'s Office	40.27

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

c overcast, g gloomy, d drizzling rain, p passing temporary showers, d dew.

100. The variations are negative when the mean for the week is less than the corresponding normal mean, and positive when greater.
101. The means of the district are two numerical averages of the rainfall returns received in the district, i.e., one the total rainfall at the station and the other the total rainfall at the district.

SUPPLEMENT TO THE CALCUTTA GAZETTE, AUGUST 17, 1887.

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 12th of August 1887.

District.	Station.	RAINFALL.							TOTAL.		Total rain-fall since 1st of month.	Average total rain-fall from 1st of month.	Total rain-fall since 15th May 1887.	Average rainfall from 15th May to date.
		Saturday, 6th August.	Sunday, 7th August.	Monday, 8th August.	Tuesday, 9th August.	Wednesday, 10th August.	Thursday, 11th August.	Friday, 12th August.	Number of rainy days.	of Rainfall week.

— Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns corresponding spaces in the total rainfall columns are left blank.

TA, the 16th August 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS
TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
12TH OF AUGUST 1887.**

THE meteorological conditions prevailing over the province for the previous week were almost normal for the rainy season, and a fairly strong monsoon current had been blowing, which had given rise to good general rain. The two branches of the monsoon current had alternately increased and decreased in strength, and on the 5th the province was about equally influenced by the current blowing from the Bay of Bengal and by the Bombay monsoon current, and westerly winds from the Arabian Sea current were blowing in Chutia Nagpur and South Behar and over parts of South-West Bengal and Orissa. On the 6th the monsoon current blowing from the Bay of Bengal commenced to increase in strength, and the interaction between the two currents over the central parts of the province produced a distinct cyclonic circulation of winds over part of Behar, and also produced more or less disturbed weather generally over the province, and rather heavy and general rain was reported. On the following day there was a slight increase in the strength of the westerly monsoon current, but otherwise conditions were unaltered, and again rainfall was general, though the amounts received were rather irregular. On the 8th there was a distinct tendency to the formation of a cyclonic circulation of winds over the central parts of the province, and rainfall continued general in all districts, and also rather heavy, except in the south-western districts. Conditions remained practically unchanged on the 9th, and rainfall continued, and on the 10th a great decrease in the strength of the westerly current took place, and rather strong south-easterly and easterly winds prevailed at almost all stations. On this day also general rainfall was reported, and very heavy falls were received in some of the districts of North Bengal and North Behar. On the 11th similar conditions as to the direction and intensity of the monsoon current obtained, but the area of rainfall commenced distinctly to contract, and parts of the east and north of the province became to a great extent rainless. On the 12th the westerly element again commenced to make itself felt slightly, but it was evident that both branches of the monsoon had become decidedly weaker as rain-bearing currents, and on this day the area of rainfall again rapidly contracted, and the greater part of the province received little or no rain.

It will thus be seen that the meteorology of the week has again been of very simple nature, and that a good monsoon current has been blowing over the province throughout the week: first one branch of the current predominating, and then the other, but at the close of the week the two currents were rapidly decreasing in force as measured by the amount of rainfall received.

Pressure.—As is usual when the conditions of the atmosphere are nearly normal, the variations of pressure have been of a more or less oscillating nature, but, with the reduction in the strength of the monsoon current blowing over the province, these oscillations have had an upward tendency, and pressure at the close of the week was very decidedly above the normal. For the first two days pressure generally rose, it then fell for one or two days, and rose generally for the remainder of the week, and on the 12th the average pressure was decidedly more than a tenth of an inch in excess of the normal, and at some stations, such as Purneah and Durbhanga, the excess was larger than 0.17". Taking only those stations into consideration from which observations have been received for a considerable number of years, and which therefore furnish reliable averages, the mean pressure of the whole province of Bengal for the week may be said to have been 0.058" in excess of the normal, while the extreme variations are from an excess of 0.089" at Durbhanga to about 0.04" in the extreme west of the province. In Assam the mean pressure has also been in excess of the normal by 0.057", and the smallest excess is at Silchar, where it equals 0.047", and the largest at Sibsagar, where it is 0.067".

Temperature.—Variations during the week have been of little importance, but owing to the heavy rainfall the mean temperature has been below the normal in all districts. The largest defects are in North and South Behar and in Chutia Nagpur, where they range from 2° to 2½°; in North Bengal the defect is 1.1°, while in East and South-West Bengal and Orissa the defects are less than 1°. For the whole province of Bengal the mean temperature has been below the normal by 1.4°. In Assam also temperature has been below the normal by an average amount of 1.5°.

Rainfall.—The daily distribution of the rain has already been referred to, and with the general and rather heavy falls that have occurred, rainfall has been in excess of the normal over the greater part of the province. Compared with the normal fall for the period, and expressed as a percentage of this amount, the actual falls in each meteorological district will become in Orissa 85 per cent.; in South-West Bengal 105 per cent.; in East Bengal 95 per cent.; in North Bengal 109 per cent.; in North Behar 153 per cent.; in South Behar 126 per cent, and in Chutia Nagpur 159 per cent. Taking each of these districts to have an equal value in the calculation, the actual average rainfall of the whole province for the past week has equalled 119 per cent. of the normal. Taking up the rainfall more in detail, the following are the districts which have received very heavy rain, that is amounts largely in excess of the normal:—Bankoorah, Moorshedabad, Chittagong, Dinagepur, Rungpur,

Purneah, North Bhagulpore, Darbhunga, Chumparun, Shahabad, Gya, Sonthal Pergunnahs, Hasaribagh and Chyebassa; while the following have received decidedly defective falls:—Balasore, Midnapur, Burdwan, Burrisal, Furreedpur, Bogra, and Pubna.

A few very heavy falls have been reported during the week, and thus on the 10th, Darjeeling received 6 inches, and on the 7th Buxar in the Darjeeling hills district reported the excessive fall of 16·10 inches. At many stations falls in excess of three inches have been received on single days, while in several instances four and five inches have been recorded.

At the Assam stations the following are the amounts recorded during the week:—At Dhubri 5·61 inches, at Silchar 5·01 inches and at Sibsagar 4·65 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 12th of August 1887:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The mean temperature of the seven days

The extreme variation of temperature

The maximum temperature

The mean relative humidity

The total fall of rain from 7th to 13th August 1887

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;

The 15th August 1887.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE leading facts in connection with the mortuary statistics of the districts in Bengal, for the month of April 1887, are the following:—

1. That 126,212 persons died among a population of 66,163,884, representing a casualty-rate of 22·80 per 1,000 per annum, against 19·08 per 1,000 in the preceding month, and 20·88 per 1,000 during the corresponding month of the past year, indicating, as compared with both the periods, a considerable improvement in the registration of deaths.

2. That the highest death-rates were reported to have occurred in the following districts:—

Districts.			Districts.		
		Ratio per mille.			Ratio per mille.
Backergunge	...	47·88	Maldah	...	28·20
Jalpaiguri	...	41·04	Rajshahye	...	27·84
Pubna	...	37·32	Birbhum	...	27·60
Rungpore	...	35·88	Faridpore	...	27·60
Dinajpur	...	33·48	Darjiling	...	27·36
Murshidabad	...	31·32	Bogra	...	25·56
Puri	...	30·00	Noakhali	...	25·44
Bhagulpore	...	29·40	Jessore	...	25·08
Monghyr	...	29·16			

3. That in comparison with the results of the corresponding month of the preceding year, the mortality from fever had increased to a noticeable extent, the death-rates from bowel-complaints and injury exhibited no variations, and there were no marked differences in fatal results from the rest of the diseases above specified, *vide* figures given below:—

				Ratio per mille during—	
				April 1887.	April 1886.
Cholera	3·72	3·24
Small-pox	·10	·12
Fever	15·00	13·02
Bowel-complaints	·72	·72
Injury	·24	·24
Other causes	2·76	2·40

4. That the following districts returned conspicuously high mortality from cholera and fever, and that no districts exhibited any noticeable high suffering from the other diseases mentioned in the above table, excepting Puri, where 12·24 per 1,000 of the population died from the unspecified diseases coming under the head of "Other causes":—

Cholera.			Fever.		
		Ratio per mille.			Ratio per mille.
Backergunge	...	21·72	Jalpaiguri	...	32·40
Faridpore	...	14·64	Pubna	...	30·12
Puri	...	9·60	Dinajpur	...	29·88
Rungpore	...	7·32	Rungpore	...	26·62
Jessore	...	6·84	Rajshahye	...	26·68
Jalpaiguri	...	6·84	Murshidabad	...	23·16
Balasore	...	6·60	Bogra	...	23·04
24-Pergunnahs	...	6·48	Maldah	...	22·20
Dacca	...	5·76	Monghyr	...	21·84

Monghyr	...	3·48			
Nuddea	...	3·36			
Gya	...	3·12			

5. That under the heads of *Sex*, *Class* and *Age*, the mortality stood as follows:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	25·20	Christians	12·48	Under 1 year	135·96
Females	20·52	Hindus	21·48	1 and under 5 years	28·68
Ratio of male deaths to every 100 female deaths	121	Mahomedans	25·80	5 " " 10 " "	12·60
		Budhists	13·20	10 " " 15 " "	10·92
		Other classes	20·88	15 " " 20 " "	15·48
				20 " " 30 " "	16·20
				30 " " 40 " "	18·00
				40 " " 50 " "	21·96
				50 " " 60 " "	30·12
				60 years and upwards	48·00

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 15th August 1887.

	1	2	3	4	5	6	7	8	9

MEMORANDUM.

THE table annexed to this memorandum indicates—

1. That during the week ending 30th July 1887, the birth and death-rates of the principal Municipalities in Bengal amounted to 21·9 and 39·1 per 1,000 of population, respectively, as opposed to 16·5 and 29·2 per 1,000, respectively, in the preceding week ending 23rd July, showing a very considerable increase in the registration of both the events, notably of deaths.

2. That the following Municipalities returned the highest proportions of births and deaths :—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Patna	68·1	Patna	124·0
Comillah	30·8	Gya	69·7
Puri	29·4	Puri	54·6
				Arrah	46·7
				Suburbs of Calcutta	35·6
				Beauleah	34·1
				Purneah	31·1
				Midnapore	31·0
				Bhagulpore	30·8
				Serampore	29·4

3. That, contrasted with the results of the preceding week, it appears that there occurred much increase of mortality from fever, the diseases classed under the head of "Other causes" and bowel-complaints, in the order named; fractional increases in fatal results for cholera and injury; and no variation in fatality from small-pox :—

				Ratio per mille during the weeks ending—	
				30th July 1887.	23rd July 1887.
Cholera	8·0	7·4
Small-pox	1	1
Fever	14·2	10·3
Bowel-complaints	5·1	3·5
Injury	7	3
Other causes	11·0	7·5

4. That while the following Municipalities exhibited conspicuously high mortality from cholera, fever and the maladies classed as "Other causes," in the rest of the Municipalities no noticeable severity from the other diseases, indicated above, occurred, excepting in Patna, where 13·3 per 1,000 of the population died from bowel-complaints :—

<i>Cholera.</i>		<i>Fever.</i>		<i>Other Causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Patna	30·5	Patna	43·5	Patna	32·8
Puri	29·4	Beauleah	21·0	Gya	19·0
Gya	25·3			Puri	18·9
Arrah	21·6			Suburbs of Calcutta	12·0
Bhagulpore	7·2			Arrah	10·8
Midnapore	6·2				
Howrah	4·0				

5. That the mortality of the week, classified under the heads of *Sex*, *Class* and *Age*, stood as follows :—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	40·1	Christians	39·1	Under 1 year	293·3
Females	37·9	Hindus	41·9	1 and under 5 years	80·1
Ratio of male deaths to every 100 female deaths	119	Mahomedans	32·9	5 " " 10 "	27·0
				10 " " 15 "	23·5
				15 " " 20 "	24·6
				20 " " 30 "	19·0
				30 " " 40 "	23·7
				40 " " 50 "	24·6
				50 " " 60 "	40·4
				60 years and upwards	86·6

R. LIDDERDALE, M.D., *Deputy Surgeon-General*,

The 15th August 1887.

Sanitary Commissioner for Bengal.

*General remarks on the fluctuation of principal staples carried over the East Indian Railway
during the month ended 30th June 1887.*

INCREASES.

Coal and coke.—There was an increase in both upwards and downwards despatches; that in the former was due to demands by the Public and Foreign Railways. The downward increase may be ascribed to the facilities afforded by the new route over the Jubilee Bridge; a considerable quantity was despatched to stations on the Eastern Bengal State Railway and to Sealdah.

Rice (husked and unhusked).—The reason for the increase in this commodity is much the same as that given in previous reports, namely, full stocks at stations and high prices prevailing up-country.

Other rain and spring crops.—The increases were principally from stations on the Allahabad district to meet demands at Howrah and also local requirements.

Lac.—This increase can be accounted for in no other way than that the traffic in June 1886 was very poor.

Railway Material, Foreign.—Due to despatches from Howrah for the Oudh and Rohilkund and Indian Midland Railways, and from *via* Jubbulpore for the latter system only.

DECREASES.

Cotton.—The cotton season closed at about the middle of May 1887, somewhat earlier than in 1886, hence this decrease.

Turmeric.—This small decrease may be attributed to competition by river steamers and to the diversion by the Bengal and North-Western Railway.

Piece-goods, European.—Due to slack demand, which is usual at this time of the year.

Wheat.—The decrease is attributable to a bad crop, sudden collapse in the home markets, and to dealers holding back for better prices.

Grain and Pulses.—The decrease was principally in the despatches from the Punjab owing to the produce being required for local consumption, and to heavy despatches from Cawnpore in 1886 to meet a demand in Calcutta partly for shipment to Madras.

Iron.—The decrease was due to a falling off in the despatches from Howrah, whence considerable quantities of machinery were sent to Cawnpore in 1886.

Opium.—Due to the arrangements made by the Government Opium Department.

Salt.—This decrease is assignable to the diversion from this system of the Sambhar salt by the Bombay Baroda and Central India Railway to Cawnpore.

Sugar, refined and unrefined.—There was an increase in the weight carried attended with a decrease in earnings, and this is due to the following causes:—

(1).—Better crops in the North Western Provinces.

(2).—Cheaper market rates up-country, which deterred sales of Shahabad produce.

(3).—A poor crop in the Shahabad district.

Tobacco.—This decrease is attributable to bad crops in Tirhoot.

Seeds.—Due to low prices quoted in Calcutta and stocks being kept back for a rise in the market prices.

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 9th August 1887.

N. ST. L. CARTER, Traffic Manager.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate Return of Traffic for week ended 6th August 1887, on 1,519 miles open.

RESOLUTION ON THE REPORT OF THE PROTECTOR OF EMIGRANTS ON EMIGRATION TO BRITISH AND FOREIGN COLONIES FOR THE YEAR 1886.

GENERAL DEPARTMENT—COLONIAL EMIGRATION.

Calcutta, the 23rd August 1887.

RESOLUTION.

READ—

The Report by the Protector of Emigrants on emigration to British and Foreign Colonies for the year 1886.

THE year 1886 is marked in the history of Emigration from India to the Colonies by the coming into force of Act XXI of 1883 which repealed the Indian Emigration Act of 1871. The introduction of the Act of 1883 was postponed until rules had been framed for its administration. Draft rules under the Act were published in January 1885, and were considered at a Conference held in August of the same year, in which the Agents for Colonies receiving Indian emigrants took part. The alterations approved at the Conference were for the most part adopted by Government, and the Act and Rules framed under it came into force simultaneously from 1st April 1886. The changes made by the new law are chiefly matters of detail with regard to the registration of emigrants, appointment of registering officers, execution of contracts, the accommodation to be required on emigrant vessels, and the fees to be levied on emigration. The Protector reports that the new provisions of the law have generally worked smoothly, with the exception of the provisions contained in section 35 of the Act, and section IV of Chapter II of the Rules which require that emigrants' agreements shall be executed in triplicate. The Lieutenant-Governor has recently called on Commissioners of Divisions to report on the

working of the present system of registration and execution of contracts, and he reserves for the present remarks on this subject.

Among the administrative measures of the year may be mentioned—

(a).—The notification of the Government of India, of April 1886, fixing Rs. 2-8 as the fee leviable under sections 38 and 73 of the Act on account of each emigrant embarked.

(b).—The orders of this Government, of September 1886, sanctioning, as an experimental measure, the payment of remuneration to magisterial clerks for the registration of emigrants to the Colonies at rates of one-anna for each labourer and half-an-anna for each dependent, when the numbers exceed 50 in a month, and within a limit of Rs. 15.

2. Emigration to the Colonies during 1886 was on a somewhat larger scale than in the preceding year, but the number of emigrants did not nearly come up to that of 1884-85, before the decline of the sugar industry, when ten Colonies had agencies working in Calcutta. Only four Colonies indented last season for labourers, viz., British Colonies—Demerara, Trinidad, Fiji, and the Dutch Colony of Surinam. On the whole, requisitions were received for 7,010 labourers against 6,430 in 1885-86 and 18,639 in 1884-85. Of the total number for whom requisitions were received in the year under review, Demerara indented for 3,710, or a little more than half, Trinidad indented for 2,050, Fiji 930, and Surinam 320. The increased demand for Indian labour in Fiji, noticed in last year's Resolution, has not been fully maintained.

From the recent official reports received from the Colonies which import Indian labour, it does not appear that there is likelihood of an early return to the large requisitions for labour which were received some years ago. In Jamaica, Government-directed immigration has been suspended. The Protector of Immigrants in Natal reported in March last that there was no immediate prospect of improvement in the sugar industry. In the last report received from St. Lucia, the Protector of Immigrants writes:—"The prospect of sugar is so bad that it cannot be known how soon one or more of the central factories may be forced to abandon operations. In such an event, if Demerara or Trinidad do not relieve us of the coolies thrown out of work, the one course for the Colony will be to send them back to India without the loss of a day." The same report states that the Indian immigrants in St. Lucia have suffered considerably from sickness caused by employment in malarious lands and from want of work. The authorities of this Colony refused to sanction the departure of labourers no longer under indenture to Panama, where high wages, which have attracted large numbers of immigrant labourers from Jamaica, are paid on the Panama Canal Works. This refusal was prompted by considerations of the interests of the immigrants for whom the Colony is bound to provide work for five years after the term of their first indenture.

3. The Colonial Agencies employed 466 recruiters during the year. Dr. Grant reports that applications have been more freely made for recruiting licenses since Act XXI of 1883 came into force, no fee being now leviable. It is noticed with satisfaction that the licenses of only four recruiters were cancelled for misconduct. The 466 recruiters collected 8,302 persons, an average of 18 persons to each recruiter.

4. The total number of persons registered during the year as intending to emigrate to the Colonies was 8,302. In the classification of these according to the provinces where they were registered, the North-Western Provinces with Oudh come first with 4,271 registrations, while Bengal and Behar had 4,031. The largest numbers of emigrants were registered in the 24-Pergunnahs (1,388), Shahabad (1,038), Patna (990), Benares (931), Allahabad (725), and Faizabad (538). Classified according to districts of birth or residence, the largest numbers of emigrants came from Shahabad (1,060), Ghazipore (504), Patna (478), Basti (463), Azamgarh (435), Gya (332), and Allahabad (328). With regard to these figures, Dr. Grant remarks:—

"If the two emigration seasons of 1884 and 1885 be excluded, it may be said that for years past natives of the North-Western Provinces and Oudh have responded in the largest numbers to the labour requisition of the Colonies, for excepting the natives of Behar, those of the Lower Provinces generally, unless pressed by privation, have always proved, more or less, reluctant to

emigrate to the Colonies, notwithstanding the favourable terms offered by the recruiters. It may be noticed, accordingly, that Colonial emigration from the districts of the Lower Provinces, which rose into prominence during the scarcity that prevailed in them in 1884 and 1885, subsided during the comparative abundance that followed in 1886, when Colonial recruiters had therefore to revert for the majority of their recruits to the North-Western Provinces and Oudh. But in so doing they obviated the competition, however slight, that may have arisen between themselves and licensed recruiters for the tea districts. * In 1886, as in 1885, the Colonial recruiters in Bengal and Behar were most active during the months—June to October—when licensed inland recruiters—sardars were least so; and the work of the one set was drawing to a close, when that of the other was extending.”

5. Out of 8,302 persons registered, 8,121* were admitted into the Calcutta depôts. Of the casualties accounting for this decrease, 96 were desertions *en route*, 34 were detained in the mofussil depôts, and 49 were rejected by the agencies as unfit; these figures compare favourably with the casualties of the preceding year. Including persons remaining at the end of the preceding year, 8,171 persons were accommodated in the depôts during the year, 22 of whom died, 187 deserted, and 911 were rejected or discharged by the recruiting agencies for one cause or another; these figures also compare favourably with those of the preceding year. The year was healthy in the depôts, and the general average mortality was much below that of former years. Cholera, which was prevalent during the year in Calcutta and the Suburbs, caused only one of the 22 deaths in the depôts. The Medical Inspector writes:—

* Includes one birth *en route*.

“It is remarkable that not a single case of cerebro-spinal fever occurred in any of the depôts; the contrast in this respect with the preceding year being noteworthy, although it is difficult to suppose that the general hygienic condition of the depôts was very different from that which obtained in 1885. There is no doubt that the etiology of this disease has not yet been determined.”

The average period for which emigrants are detained in the depôts is not given, but from the statement on page 12 of the report, it appears that only 113 persons were detained for a period exceeding three months; an outbreak of measles in the Surinam depôt was the chief cause of delay in embarkation. The general sanitary arrangements in all the depôts are reported by the Medical Inspector to be excellent.

6. Of the 6,423 persons who actually embarked for the Colonies during the year, 3,964 were men, 1,613 women (or 40·6 women for every 100 men) and 846 children. Calculating the percentage of females on the whole number embarked, including children, the proportion was 45·4 females for every 100 males. Nine hundred and fifty-nine persons of both sexes and all ages, or 14·93 per cent of the whole number, were “return emigrants,” the majority having come back from Demerara, St. Vincent and Trinidad. The emigrants were carried to the Colonies in sailing vessels (no steamers were employed on this service in 1886), and the voyages varied in length from 69 days—the fastest voyage to Fiji, to 106 days—the slowest voyage to Demerara. The aggregate mortality* on the voyages was 77, giving the not excessive percentage of 1·19 on the whole number embarked. On six of the 12 ships the death-rate was below 1 per cent., and only on two ships did the percentage of deaths exceed two. Cerebro-spinal fever caused six deaths, and measles caused much of the mortality amongst infants and young children.

* Not 2·21 as stated on page 13 of Dr. Grant's Report

Five thousand six hundred and twenty-one emigrants re-embarked from the Colonies for India during the year, bringing with them savings amounting to six and a quarter lakhs of rupees, an average of Rs 111·4·4 per head. As in former years, those returning from Trinidad and Demerara brought back most money, and those returning from Mauritius had saved least. The death-rate on the return voyages was below 2 per cent. on all the voyages, except those of the *Mount Tabor* and *Mairi Bhan*. The emigrants who returned in the *Mount Tabor* had embarked from Guadaloupe in the *Jorawar*, which was dismasted by a violent gale whilst rounding the Cape of Good Hope, and at Port Elizabeth they were transferred to the *Mount Tabor*. The excessive mortality of 9 per cent. on this voyage appears to have been due to the

Return emigrants.

severity of the passage, which lasted five-and-a-half months, and to the feeble health of some of the passengers. The voyage of the *Mairi Bhan* from Trinidad, which lasted six-and-a-half months, was also a trying voyage on account of the insubordination of the crew and the defective state of the water condenser; the mortality of this ship was 5·8 per cent., chiefly among invalids.

The work of the Protector in the tracing of heirs to vacant estates of emigrants who had died in the Colonies or on the return voyage continued to increase, 235 vacant estates, valued at Rs. 38,823, having come under his administration during the year.

The Lieutenant-Governor's acknowledgments are due to Dr. Grant for his efficient discharge of his duties.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offg. Secretary to the Govt. of Bengal.

RETURNS OF JOINT-STOCK COMPANIES FOR THE YEAR 1886-87.

Statement showing the Name and Number on the Register borne by each Joint-Stock Company registered in the Calcutta Registry Office, with its Object, Nominal Capital, and date of Registration during the year ending 31st March 1887.

CALCUTTA, The 12th May 1887.

P. GHOSHIA,
Registrar of Joint-Stock Companies.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 20th August 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts			
BURDWAN DIV.	1 Burdwan, Aug. 20, '87	0.05	Weather—very hot and sultry; break in rains continues. Crop prospects so far fair, but rain will now be much required. Prices stationary. Cholera continues in the Sudder. Public health in sub-divisions good.

Explanation. Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 23rd August 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
19th OF AUGUST 1887.**

It was mentioned in the report for the previous week, that at its close both branches of the monsoon blowing over Bengal had become most decidedly weaker, and at the commencement of the present week, and throughout the greater part of it, similar conditions have obtained. During this period, however, a feeble cyclonic storm has formed in the Bay, which only crossed the west coast south of Gopalpore on the 19th. This storm has naturally formed the most prominent feature in the meteorology of the week, and during its formation and advance towards the west coast, the monsoon winds have been mainly deflected towards it, and thus for the greater part of the week the rain falling in Bengal has been both local and scanty, and a distinct break in the rain has been established for the whole of the week.

On Saturday, the 13th, the conditions over Bengal and the sea area to the south of it were those of an ordinary very light monsoon, except that pressure was decidedly low along the coast of Madras from Gopalpore to Masulipatam. Winds also were rather more strongly easterly along the west coast than is usual. Conditions remained almost unchanged for the following two days at the stations in the northern half of the Bay and in Bengal, but the strength of the monsoon blowing in the south of the Bay began to increase very considerably. On Tuesday, the 16th, winds became north-easterly at many stations in Bengal, and also along the Orissa coast and at Akyab, while to the south winds were westerly. It was therefore clearly evident on this day that a distinct depression had formed in the centre of the Bay. On the 17th the centre of the feeble storm was off the South Orissa coast, but it had not strengthened to any material extent, though there was a distinct cyclonic circulation of winds accompanying it. On the 18th it had approached rather nearer the land, but it still remained a feeble storm, and on the morning of the 19th it was crossing the South Orissa coast, and the centre of the storm on this day was a little distance inland. The storm afterwards drifted into the Central Provinces, where, after a day or two, it filled up. It was a remarkably persistent storm, though the barometric depression at its centre was feeble, and though the winds in connection with it were comparatively light; but at sea it gave rise to somewhat squally weather and rough sea. In the rear of the storm also a strong monsoon was blowing, and it was only after the feeble storm had advanced inland, that it became possible for the monsoon winds to again flow over Bengal. It will thus be seen that the conditions during the present week have been decidedly unfavourable for rainfall. It is in fact only along the line of the hills at the stations in North Behar and North Bengal that anything like general rain has occurred during the week, but in these districts, for the first two or three days, general and rather heavy rain was received, particularly in North Behar.

Pressure.—The changes of pressure during the week have not been very important. On the 13th pressure fell generally. This fall continued on the 14th, but on the 15th it was confined to the southern and western districts only. This local fall continued on the 16th and 17th, but on the 18th the fall again became general, and on the 19th again the fall was confined to the south-western stations, while over the remainder of the province pressure was rising. These changes were of course clearly connected with the development of the depression above described. Pressure at the close of the previous week was rather largely above the normal, and the effect of these changes has been to somewhat reduce this excess, particularly in the districts most affected by the formation of the depression. Thus the mean pressure for the whole week has been only 0.019" in excess of the normal at Copalpur and 0.025" in excess at False Point, while at Purneah the excess has been 0.114" and at Dacca 0.072". The mean pressure for the week in Assam has also been above the normal, the excess averaging 0.043".

Temperature.—Owing to the comparative absence of rainfall, the temperature of the province has risen considerably, and the general average temperature has been decidedly above the normal. The only districts in which the mean temperatures for the week have been below the normal are North and South Behar, but in neither case does the defect equal one degree. In North Bengal the excess above the normal temperature has been small and is only 0.8°, but in Orissa, South-West Bengal and Chutia Nagpur, the excess has varied from 1° to 2°, and in East Bengal the excess has equalled no less than 2.6°. For the whole province the mean temperature for the week has been 0.9° in excess of the normal. In Assam, also, temperature has been almost steadily above the normal, and the excess has averaged 0.8°.

Rainfall.—Has been light and local in all districts except North Behar and North Bengal, but the only district in which the fall has been at all heavy is North Behar. In this district an average fall of 3.50 inches has been received, which is no less than 1.32 inches in excess of the normal fall for the period. North Bengal has received the next largest fall, but in this district the average fall has only been 1.80 inches, which is 1.33 inches in defect of the normal. In Orissa the fall has averaged 1.30 inches, or 1.63 inches less than the normal. In all other districts the average amounts received have been less than one inch, and in most cases the defects vary between two and three inches. The smallest average fall in any district is 0.22 inch in Chutia Nagpur, and this is only about one-fifteenth of the usual fall for the week. Compared with the normal fall, and expressed as a percentage of that amount, the actual average falls in the seven

meteorological districts during the past week are.—Orissa 44 per cent., South West Bengal 19 per cent., East Bengal 17 per cent., North Bengal 57 per cent., North Behar 160 per cent., South Behar 30 per cent., and Chutia Nagpur 7 per cent. If each of these districts be considered to have an equal value in the calculation, the general average rainfall of the province for the week has only equalled 48 per cent. of the normal. Some districts in fact have scarcely received any rain at all during the week, and thus the following districts have received average falls of less than a fifth of an inch :—Burdwan, Pubna, Mymensingh, Sonthal Pergunnah, Hazaribagh Chyebassa.

In Assam the following amounts of rain have been received during the week :—Dhubri 1·18 inches, Sibsagar 0·81 inch and Silchar 0·78 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 19th of August 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.				Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The mean temperature of the seven days

The extreme variation of temperature

The maximum temperature

The mean relative humidity

The total fall of rain from 14th to 20th August 1887

The mean temperature and humidity are obtained by applying to the mean of the 10th, 16th, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

The total fall from 1st January to 20th August 1887	42.11
The average fall of the corresponding period for 24 years, S. G.'s Office	44.02

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Alipore Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew, < lighting.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE mortuary statistics of the districts of Bengal for the month of May 1887 present the following results:—

1. That the deaths of 140,829 persons were registered among a population of 66,163,884, representing an annual casualty-rate of 25·44 per 1,000 against 22·80 per 1,000 in the preceding month, and 18·24 per 1,000 in the corresponding month of 1886, indicating, as compared with both the periods (especially with the latter), a considerable increase in the registration of deaths.

2. That the following districts returned the highest proportions of deaths:—

Districts.			Districts.		
		Ratio per mille.			Ratio per mille.
Chumparun	...	63·12	Nuddea	...	29·64
Gya	...	55·92	Dinajpur	...	29·28
Monghyr	...	49·92	Bogra	...	28·56
Jalpaiguri	...	43·56	Puri	...	28·56
Bhagulpur	...	34·80	Backergunge	...	28·44
Rajshahye	...	34·32	Hazaribagh	...	28·32
Darjiling	...	32·88	Shahabad	...	27·72
Pubna	...	32·64	Patna	...	27·60
Rungpur	...	30·24	Balasore	...	25·68

3. That the total mortality of the month, distributed under the following specific heads of disease, stood as follows:—

				Ratio per mille during—	
				May 1887.	May 1886.
Cholera	5·88	1·68
Small-pox	·12	·12
Fever	15·36	12·96
Bowel-complaints	·84	·72
Injury	·36	·36
Other causes	2·64	2·16

indicating chiefly, in comparison with the mortality of the corresponding month of the preceding year, a considerable increase in the death-rates from cholera and fever, particularly from the former.

4. That while the following districts exhibited exceptional high mortality from cholera and fever, the rest did not display any noticeable severity from the other diseases mentioned in the foregoing table, excepting Puri, where 12·96 per 1,000 of the population died from the maladies coming under the head of "Other causes":—

Cholera.			Fever.		
		Ratio per mille.			Ratio per mille.
Chumparun	...	42·72	Rajshahye	...	31·68
Gya	...	26·28	Jalpaiguri	...	31·68
Monghyr	...	13·80	Monghyr	...	30·60
Mozufferpur	...	12·36	Pubna	...	28·92
Balasore	...	9·72	Dinajpur	...	26·04
Bhagulpur	...	9·24	Bogra	...	25·20
Jalpaiguri	...	9·12	Gya	...	23·88

Dacca	...	2·52			

5. That in relation to *Sex*, *Class* and *Age*, the mortality of the month stood as follows:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	27·96	Christians	...	12·00	Under 1 year	...	146·16
Females	...	23·04	Hindus	...	26·28	1 and under	...	95·88
Ratio of male deaths to every 100 female deaths	...	119	Mahomedans	...	24·36	5 " "	10 " "	15·72
			Budhists	...	16·32	10 " "	15 " "	13·08
			Other classes	...	20·64	15 " "	20 " "	17·64
						20 " "	30 " "	18·24
						30 " "	40 " "	19·20
						40 " "	50 " "	23·62
						50 " "	60 " "	32·16
						60 years and upwards	...	45·36

The 22nd August 1887.

R. LUDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

MEMORANDUM.

THE birth and death returns from the principal Municipalities in Bengal afford the following results for the week ending 6th August 1887 :—

1. That births were registered at the rate of 16·7 per 1,000 of population, and deaths at 28·4 per 1,000 as opposed to 21·9 and 39·1 per 1,000, respectively, during the preceding week ending 30th July, indicating a considerable falling off in the registration of both the events.

2. That the highest proportions of births and deaths were returned from the following Municipalities :—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Comillah	38·5	Arrah	81·4
Arrah	33·5	Gya	69·0
				Puri	62·9
				Beaulah	39·4
				Scrapore	39·3
				Suburbs of Calcutta	35·4
				Patna	34·4
				Ranaghat	29·9

3. That, in comparison with the results of the preceding week, there was a considerable reduction in the death-rates from cholera, fever, bowel-complaints, and the unspecified diseases coming under the head of "Other causes," and only fractional diminution of mortality from injury, small-pox presenting no variation :—

				Ratio per mille during the weeks ending—	
				6th August 1887.	30th July 1887.
Cholera	6·0	8·0
Small-pox	·1	·1
Fever	10·2	14·2
Bowel-complaints	3·6	5·1
Injury	·8	·7
Other causes	7·9	11·0

4. That the following Municipalities suffered pre-eminently from cholera, fever and the maladies grouped under the head of "Other causes," the rest of the diseases above named manifesting no noticeable severity :—

<i>Cholera.</i>		<i>Fever.</i>		<i>Other Causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah	41·9	Beaulah	31·5	Scrapore	19·6
Puri	33·5	Ranaghat	29·9	Gya	19·0
Gya	25·3			Arrah	16·8
Patna	8·4			Puri	12·6
Chupra	3·9			Suburbs of Calcutta	11·6
Suburbs of Calcutta	2·7				

5. That the death rates in relation to *Sex*, *Class* and *Age*, stood as follows :—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	29·7	Christians	13·0	Under 1 year	224·7
Females	26·9	Hindus	30·5	1 and under 5 years	62·6
Ratio of male deaths to every 100 female deaths	725	Mahomedans	24·3	5 " " 10 "	16·3
				10 " " 15 "	14·5
				15 " " 20 "	21·0
				20 " " 30 "	19·8
				30 " " 40 "	12·1
				40 " " 50 "	21·7
				50 " " 60 "	26·2
				60 years and upwards	55·1

RESOLUTION ON PROGRESS REPORT OF FOREST ADMINISTRATION IN BENGAL FOR 1886-87.

REVENUE DEPARTMENT--FORESTS.

Calcutta, the 26th August 1887.

RESOLUTION.

READ—

The Progress Report of Forest Administration in Bengal for 1886-87.

The Report, which was due on the 1st, was received in the Secretariat on the 4th instant. The Annual Report has not in any recent year been submitted on so early a date, and the Conservator deserves commendation for his efforts to attain punctuality. Mr. Home was in charge of the Department throughout the year, except from the 9th June to 20th August 1886, when sickness obliged him to take privilege leave, and Mr. Chester officiated as Conservator.

2. The forests in the Lower Provinces under the control of the Department at the end of the year under review covered a total area of 7,317,594 acres, or 11,434 square miles, classified as follows:—

					Area in acres.
Reserved	3,191,225
Protected	1,404,923
Unclassed	2,581,420
Total					7,177,568
Proposed reserves not yet finally gazetted					140,026
Total					7,317,594

There was an increase of 9,157 acres in the area of reserves by addition of the Dondimal and Khorda ranges in Orissa, which were taken out of the class of Protected Forests, and the area of forests of the latter class was further diminished by transfer of 5,765 acres in the Sunderbans and Khorda to the Revenue officers for settlement. The area of unclassed forests includes only the forests in Chittagong shown in former reports under the name of District Forests. The forests gazetted as proposed reserves, but not yet finally notified under section 19 of the Forest Act, are, for the most part, in Chota Nagpore. The forests last referred to were notified as proposed reserves as long ago as 1880 and 1882; but on account of difficulties which have arisen in determining the rights of the villagers who dwell on the borders of the proposed reserves local enquiries are still going on. In the case of the Porahat Forests there was unnecessary delay in the proceedings of the Forest Settlement Officer first appointed; and in proceedings relating to the Khurchuta forests, the Lieutenant-Governor was unable to accept the views of the Conservator as to the sufficiency of the investigation which had been made of the rights of the cultivators.

3. The record for the reserved forests of the length of boundaries and number of boundary marks, as corrected during the year (but stated to be not yet accurate), shows a total length of 3,531 miles, of which 2,072 miles are demarcated with 27,842 posts or pillars, and the remaining 1,459 miles are natural boundaries which it is not necessary to demarcate. Seventy-seven miles of boundaries were newly demarcated during the year, 1,236 miles were re-cleared, and 628 more miles were kept clear as fire traces. The average cost per mile of the new demarcation was Rs. 8-2 and of the re-clearing Rs. 5-12, in both cases less than the cost of the preceding year. Under the head of Survey, the most important operations of the year were those carried on in Singbhoom by the Forest Survey party, who surveyed 431 miles of forests, which it is proposed to reserve. In Angul the demarcation of the reserves bordering on Native States was begun by the Revenue Survey party.

4. A special Working Plans Division was created in April 1886, and was placed in charge of Mr. Chester, Deputy Conservator of Forests, who, however, had also other charges including the charge of the Darjeeling Division throughout the year, and was therefore only able to give a portion of his time to the Working plans. The new division was able to complete a plan for the Bamanpokri Forest in the Kurseong sub-division, which has been approved by the Inspector-General of Forests and by Government, and to take in hand the plan for working the forests in the Darjeeling sub-division, from which the stations of Darjeeling and Jalapahar and the adjacent tea gardens are supplied with timber, fuel and fodder. The work done by Messrs. Chester and French and by Messrs. James and Wittenbaker in preparation of these plans is favourably noticed by the Conservator. The Lieutenant-Governor much regrets that on account of the present paucity of officers of the controlling staff (of whom three are at present absent on leave), it has been necessary to close the Working Plans Division for a time, and he hopes that, when the staff is again at its full strength, the useful work done under this head will be resumed with energy.

5. A separation of the Bengal Controlling Staff from that of Assam was sanctioned by the Government of India in September last.

The controlling staff now sanctioned for Bengal consists of one Conservator, seven Deputy Conservators, and five Assistant Conservators. In fact, Bengal has now, besides the Conservator, nine Deputy Conservators and two Assistant Conservators. The staff was therefore one officer short of its sanctioned strength during the year. The Lieutenant-Governor has been informed by the Government of India that one of the officers newly appointed to the Indian Forest Service, who will arrive in India next cold weather, will be appointed to these Provinces. The Executive staff of Sub-Assistant Conservators and Forest Rangers had seven officers of the former and 23 of the latter rank at the close of the year, and the Protective staff, which consists of Foresters and forest peons, had 83 of the former and 308 of the latter. From the statement given on page 8 of Mr. Home's report, it appears that a Forest Ranger in the Lower Provinces has on an average 497 square miles, a Forester 137 square mile, and a forest peon 37 square miles of forest to supervise.

Prosecutions were instituted during the year against three forest guards for misappropriation. One of these was convicted and one acquitted; the third case was pending at the end of the year, and the result has not been shown. Three forest peons, who were dismissed from Government service by the Divisional Officer of Chittagong in connection with a charge of extortion, were reinstated under the orders of the Lieutenant-Governor. On the whole, prosecutions and dismissals of subordinate employes were less numerous than in the two preceding years. The Conservator repeats in this report remarks which he has made in former reports with regard to the distaste generally felt by educated natives of the Lower Provinces for employment in the lower grades of the Forest service.

6. Eight hundred and thirty-nine new cases of breaches of the forest law and offences under the Penal Code were taken into Court during the year, against 624 cases instituted in the preceding year. The Conservator has not commented on this increase which requires explanation. From Statement No. 50 appended to the report, it appears that the increase was chiefly in the Sundurbuns division. The number of cases decided by the Courts, including cases pending from the previous year, was 920, of which 821, or 89·2 per cent., resulted in convictions. Besides these cases, 882 cases were compounded out of Court. The Lieutenant-Governor requests that some particulars may be given in future reports of the cases taken into Court and compounded which are returned under the head "Other offences." More than half the cases disposed of by the Courts during the year have been returned under this head without any details.

7. The area of reserved forest which the Department attempted to protect from fire during the year was 1,007,283 acres, or not quite one-third of the whole area of the reserves. The remaining area, except the forests of the Singbhoom Division, is not liable to fires. The result of the measures adopted for protection was more satisfactory than in any previous year, 897,372 acres, or 80·9 per cent. of the area in which special measures were taken, having escaped. To the 109,911 acres burned, though specially guarded, have to be added 236,220 acres and 2,040 acres burned in unprotected forests in Singbhoom and Buxa, respectively, making a total of 348,171 acres burned. The noticeable features in this part of the report are the measures of success which were attained in Singbhoom and in Angul as compared with the results of former years and the failure in the Jalpaiguri Division. In the lastnamed division, where 19,511 acres were burned, the failure was due, in the Conservator's opinion, chiefly to neglect in inspection and posting of fire guards. The special difficulties which have to be encountered in attempting protection of the Singbhoom and Angul forests were mentioned in last year's Resolution. The total amount expended in fire protection was Rs. 14,378 only, a smaller sum than was spent in the two preceding years in protecting smaller areas, and it appears to the Lieutenant-Governor that a less stinted expenditure under this head is called for.

8. The revenue realised from grazing and the sale of fodder was Rs. 6,680, half of which was raised in the Darjeeling sub-division. The Conservator's proposals for restricting sheep-grazing in the Singalila Range in this sub-division, to which reference is made in paragraph 66 of the report, are now before the Lieutenant-Governor, and it is only necessary here to remark that the question cannot be decided with reference to considerations of forest conservancy only.

9. The area of regular plantations was increased during the year by 270 acres, and the area of cultural operations (which include nurseries and the planting of blank spaces in the forests) by 19 acres. The cost of these additions, which were made chiefly in Darjeeling, Chittagong, and Khoorda, and the up-keep of plantations already existing, was Rs. 7,460. The total area of plantations of all kinds, including oak, tûn, sâl, teak, bamboos, &c., is now 3,410 acres. Cutting of creepers was actively carried on in Buxa and Kurseong, but comparatively little was done in other divisions.

10. Twenty-three miles of export roads and nearly 14 miles of inspection paths were opened during the year, and 420 miles of existing export roads and inspection paths were repaired at a total cost of Rs. 6,468. Most work was done under this head in the Chota Nagpore and Darjeeling Divisions. The total expenditure on buildings was Rs. 14,998.

11. The total amount of timber and fuel removed from the forests Working and yield of the during the year is compared with the yield of the preceding year in the following statement :—

GRAND TOTAL OF ALL FORESTS...	430,343	247,663	24,641,310	25,087,408	13,410	9,601	24,483,093	25,344,002

* The figures of the report for 1885-86 have been corrected.

More forest produce was removed by departmental agency than in the preceding year, the increase being due chiefly to indents received for the Northern Bengal State Railway, and to larger demands of the military authorities for fuel in the Darjeeling Division. With reference to the remarks made by Mr. Home in paragraph 109 of his report regarding the transactions of his Department with the Railway authorities, it is to be noticed that the Lieutenant-Governor has already expressed his desire that the Forest and Public Works Departments should come to an understanding for the delivery and purchase of sleepers in which the pecuniary effect to Government of the transactions as a whole rather than departmental profit should be kept in view.

The removals of timber by permit-holders increased by 453,181 cubic feet, but there was a large falling off of 1,499,249 cubic feet in the exports of fuel under permits. These fluctuations occurred chiefly in the Sunderbuns Division, where there was a more brisk demand for timber for the Calcutta market, but a greatly decreased demand for permits to remove fuel, the decrease being apparently connected with the notification of last year, which raised the rates for *sundri* firewood. The number of bamboos removed from the forests by Government agency and by purchasers was 17,973,964 against 16,664,460 in the previous year, and minor forest produce was removed in all amounting to 52,01,317 maunds, a yield somewhat less than that of the previous year.

Financial results.

12. The financial results of the year compare as follows with those of the two preceding years :—

	Receipts.	Charges.	Surplus.	Proportion of surplus to gross revenue.
	Rs.	Rs.	Rs.	
1884-85 ...	5,71,152	4,11,915	1,59,237	28
1885-86 ...	5,97,432	3,70,399	2,27,033	38
1886-87 ...	6,53,634	4,22,781	2,30,853	35.3

The gross revenue of the year is considerably larger than that of the last two years, and there has been a small increase in the surplus. The increase in expenditure was caused chiefly by a charge of Rs. 33,282 on account of the construction of a second steamer for the Sunderbuns Division, and by increased charges for carriage of railway sleepers. On the whole these results are satisfactory.

13. The Conservator's remarks on the conduct of officers will be noted in the Appointment Department. Mr. Home has again earned the Lieutenant-Governor's thanks for his efficient administration of his Department.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPIERSON,

Offg. Secretary to the Government of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1887-88.

No. 640B, dated Calcutta, the 17th August 1887.

From—K. G. GUPTA, Esq., Offg. Secretary to the Board of Revenue, L. P.,
To—The Secretary to the Government of Bengal, Financial Department.

I AM directed to submit the following report on the state of the salt market for the first quarter of 1887-88, comprising the months of April, May, and June 1887.

SALT.

F. M. HALLIDAY, Esq.

2. The quantity of salt of every description cleared during the quarter under report amounted to 25,84,676 maunds 8 seers 12 chittacks, against 26,06,814 maunds 38 seers 7 chittacks in the previous quarter, and 24,77,614 maunds 16 seers 14 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 49,02,270, against Rs. 48,91,893-8 in the previous quarter, and Rs. 47,09,713-8 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in the districts of Cuttack, Pooree, and Balasore during the quarter under review from the stock of the different seasons' manufacture, and the quantities which remained in store at the close of the quarter, are shown in Table I:—

* The difference between these figures and the corresponding figures in the statement submitted with the report for the previous quarter is due to revised figures since received from the Collectors.

† Inclusive of 3,157 maunds of consolidated salt sold.

4. The above statement shows that the total sale of excise salt during the quarter under review amounted to 54,509 maunds 10 seers, against 52,848 maunds 30 seers in the previous quarter, and 1,06,079 maunds 4 seers in the corresponding quarter of the previous year.

5. The subjoined Table II shows in comparison the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review and the corresponding quarters of the previous two years :—

Total		27,836 0 0	32,822 0 0	97,540 12 8	60,205 13 0

No transactions in sea-imported salt have been reported for the quarter from the ports of Cuttack, Pooree and Balasore.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 27th August 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan. Aug. 27, '87	1.88	Weather—Some days rainy; others sultry. Crop prospects improved by timely rain. <i>Aus</i> paddy being reaped and jute steeped. Prices pretty stationary. Common rice 22 or 22½ seers per rupee. Cholera still prevails in Sudder; public health elsewhere good.
	Culna ..	1.40	
	Culna ..	1.18	
	2 Raneebunge ..	2.75	Weather—cloudy with occasional light showers. Transplantation of <i>amun</i> rice still continues on high lands in some parts of the Bishnupore subdivision, where more rain is wanted. Sugarcane and other standing crops doing well. Prices have slightly fallen. Public health good.
	2 Bishnupore ..	1.31	
	Bishnupore ..	2.20	
	3 Beerbhoom ..	0.95	Weather—sultry. Condition of crops (paddy and sugarcane) very good. Public health good. Prices stationary.
	Rampore Haut ..	0.77	
	4 Midnapore ..	2.78	Weather—sultry. State and prospects of crops good. Sporadic cases of cholera.
	5 Hooghly ..	1.79	Weather—unusually hot and dry. More rain now urgently required. High lands are dry and growth of young rice retarded, especially in Jehanabad. Public health continues good.
	Seraipur ..	2.44	
	Jehanabad ..	0.81	
PRESIDENCY DIV.	6 Howrah ..	2.14	Weather—cool with light rain and clouds. Harvesting of <i>aus</i> and jute commenced. Transplanting of <i>amun</i> rice nearly completed. Public health good, though slight cholera in one or two villages.
	Oodlocheriah ..	2.21	
	Oodlocheriah ..	2.21	
	<i>Central Districts.</i>		Weather—seasonable with occasional heavy falls of rain. Prospects of <i>aus</i> , jute and sugarcane good, but more rain still wanted in places for <i>amun</i> crop. Harvesting of <i>aus</i> has begun. Public health fairly good for the time of year.
	7 24-Perahia ..	3.89	
	7 Nuddea ..	1.77	
	Kushtea ..	1.18	Weather—during early part of week cloudy with showers, later on sunny and hot. Harvesting of <i>aus</i> rice in progress. More rain wanted for <i>amun</i> . Sugarcane, turmeric, and jute doing well. Fever somewhat prevalent. Flood level slightly fallen.
	Moherpur ..	1.66	
	Chundanga ..	1.28	
	8 Ranaghat ..	1.38	Weather—seasonable. <i>Aus</i> paddy ripening; crop reported to be good. Transplantation of <i>amun</i> paddy getting on with the rain of the week. Public health generally good.
	8 Khoolna ..	1.71	
	9 Jessore ..	1.54	
RAJSHAHY DIV.	Jhenidah ..	1.33	Weather—still very hot, though some rain fell. Harvesting of <i>aus</i> and transplanting of <i>amun</i> going on. Rain still wanted. State of crops satisfactory. Public health good.
	Mugdilah ..	0.87	
	Narail ..	1.13	
	Bongong ..	3.75	Weather—hot. Rain at intervals. <i>Bhadai</i> paddy is being reaped. <i>Amun</i> paddy growing well. <i>Til</i> , sugarcane and jute progressing. Public health good.
	10 Moor-helabad ..	0.70	
	Lalbagh ..	0.65	
	11 Dinagepore ..	0.40	Slight rain during the week. About four annas of <i>bhadai</i> paddy and ten annas of jute harvested. Transplantation of <i>kaimanti</i> paddy about three-fourths done. Rice 18 to 26 seers per rupee.
	11 Dinagepore ..	0.21	
	Thakurgaon ..	0.89	
	12 Rajshahye ..	0.52	Weather—hot and generally cloudless. Cutting of <i>aus</i> paddy continues. Prospects of crops continue good. Public health generally fair.
	Natore ..	1.85	
	Nowgong ..	3.34	
RAJSHAHY DIV.	13 Rangpur ..	0.18	Weather—hot and still. Crops promising fairly. Public health good.
	Nilphamari ..	0.34	
	Gaibanda ..	0.12	
	14 Bogra ..	1.39	Weather—dry and close. State and prospects of standing crops satisfactory, but more rain wanted. Public health fair. No cases of cow-pox reported from thana Sherpur.
	Sherpur ..	1.26	
	Nowkhilla ..	1.74	
	15 Pabna ..	1.92	Weather—very hot. Prospects of crops good. Public health good.
	Serajgunj ..	1.36	
	16 Darjeeling ..	3.34	
	17 Jalpigaree ..	2.08	Weather—seasonable. State and prospects of crops good.
DACCA DIVISION.	<i>Eastern Districts.</i>		Weather—hot and cloudy with occasional showers. Transplantation of winter paddy still going on. More rain wanted. Sugarcane doing well. Reaping of <i>bhadai</i> continues. Cattle-disease prevalent in some places. Public health good.
	18 Dacca ..	2.99	
	Manickgunge ..	1.91	
	Munshigunge ..	2.21	Weather—mostly cloudy with rain. <i>Aus</i> paddy and jute are being harvested. Transplantation of winter crops going on. Rivers rising. Prospects of crops improving. Public health good.
	Narsinggunge ..	2.42	
	19 Furreedpore ..	2.29	
	Gondondo ..	3.46	Weather—seasonable. <i>Aus</i> harvested. <i>Amun</i> doing well. Jute-steeping commenced. Public health good.
	Madaripore ..	2.40	
	20 Backergunge ..	2.48	
	21 Mymensingh ..	2.44	Weather—very hot. Cultivation of <i>amun</i> crop continues; prospects favourable. Rain wanted. General health fair.
	Jamalpur ..	1.45	
	Kishorigunge ..	1.52	
	Attea ..	1.48	
	Netrokona ..	4.93	Rain every day. Weather cool. Harvesting of <i>aus</i> rice and transplanting of <i>amun</i> rice proceeding. Prospects good.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
Eastern Districts—contd.			
CHITTAGONG DIV.	22 Chittagong, Aug. 30, '87	1.29	Weather—seasonable. <i>Amu</i> still being harvested and <i>amun</i> transplanted. Rain still wanted. Prices stationary. Cholera reported. Public health fair.
	23 Noakhally " 26, "	4.85	Weather—seasonable. Reaping of <i>amun</i> nearly finished; outturn on the whole fair. Transplantation of <i>amun</i> continues. Public health fair.
	24 Fenny " " "	4.56	
	24 Tipperah " 25, '87	2.92	Weather—seasonable, but still not anything like sufficient rain. Prospects of crops excellent down to the present time. Transplantation of <i>amun</i> is in full swing, but very much more rain still wanted.
	Brahmanbariah " " "	1.79	
25 Chandpur " " "	2.20	Weather—cloudy and rainy with occasional sunshine throughout the week. <i>Jum</i> paddy progressing. Transplanting in low lands still continues. Fever prevalent.	
25 Chittagong Hill Tracts, " 23, '87	1.36		
	Hill Tipperah " 24, "	2.26	Weather—hot. More rain wanted. Transplantation of <i>amun</i> paddy still continues. Sugarcane doing well. Prospects of <i>jum</i> crops fair. Fever disappearing. Public health generally good.
BEHAR.			
PATNA DIV.	26 Patna, Aug. 27, '87	0.15	Weather—occasionally cloudy. Prospects of <i>bhadoi</i> continue very favourable. <i>Jowar</i> , flax, and <i>rahar</i> growing well. Transplantation of rice seedlings suffering for want of rain. Cholera still reported from Behar and Dinapore.
	Barh " " "	0.05	
	Behar " " "	0.04	
	Bickram " " "	0.45	Weather—cloudy. Prospects of both <i>bhadoi</i> and <i>aghani</i> good. Cholera decreasing. A few cases of fever and small-pox.
	27 Gya, " 27, "	0.80	
	28 Shahabad " 27, "	0.36	Weather—fair and cloudy alternately with occasional drizzle. Transplanting of paddy progressing vigorously all over the district, but more rain wanted. <i>Bhadoi</i> crops and sugarcane look promising and prospects good. Cholera not yet disappeared. Public health generally good. Prices stationary.
	Susseram " " "	0.14	
	Udhna " " "	0.35	Weather—cloudy. Prospects of <i>bhadoi</i> favourable. <i>Makai</i> and <i>marua</i> begun to be harvested in some places. Indigo manufacture is in progress. Prices stationary. Public health generally good.
	29 Darbhanga " 27, "	0.78	
	30 Mozufferpore " 27, '87	0.90	Weather—hot and cloudy. Harvesting of <i>bhadoi</i> crops begun in places. Prospects of standing crops fair. Cholera still reported from the interior.
	Hajipur " " "	0.67	
	31 Sitamarhi " 27, "	2.52	Weather—hot with occasional clouds. Prospects of crops continue good. River rising and danger to <i>deara</i> crops apprehended. Cholera still had in the amofussil and in the Chupra town. No cattle-disease reported.
	31 Saran " 27, "	0.46	
	Sewan " " "	0.38	Weather—hot in the beginning of the week; cool in the end. Clouds hanging. Prospect of crops good. New <i>makai</i> has begun to come into the market. More rain wanted in some parts of the district. Prices fluctuating. Public health improving.
	32 Gopalgunge " 27, "	0.72	
32 Chhannarun Bettiah " 27, "	1.00	Weather—sultry and generally cloudy. State and prospects of standing crops good, but more rain very much wanted for transplantation of winter rice still remaining to be completed. Reaping of <i>makai</i> going on everywhere with fair outturn. Cholera much abated in the interior, but a few new cases have occurred in the Monghyr town and Khurda-pore.	
33 Monghyr, Aug. 27, '87	0.70		
Begusarai " " "	0.59	Weather—sultry. Harvesting of <i>marua</i> and early rice begun; outturn of former likely to disappoint expectations. Prospects of late rice good, but rain wanted.	
34 Jamui " 27, "	0.92		
34 Bhagalpore " 27, "	1.08	Weather—cloudy and showery with intervals of great heat. Crops promising. <i>Aghani</i> transplantation is being rapidly pushed on. <i>Bhadoi</i> cut in places with fair outturn.	
35 Purneah " 27, "	1.43		
BHAGALPORE DIV.	Kishengunge " " "	3.01	Weather—hot, dry and generally fine. Harvesting of <i>bhadoi</i> paddy going on with good outturn. Winter paddy thriving, and is still being transplanted. Common rice 21 seers per rupee. Public health generally good.
	36 Arrareah " 27, "	1.94	
	36 Maldah " 27, "	0.70	Weather—hot and sunny, except last two days, which were cloudy. More rain wanted for transplanting of paddy. Indian-corn promises a fair outturn on the whole. General health good.
	Chanchal " " "	0.57	
	Yibgunge " " "	0.60	Weather—fair. <i>Beali</i> rice in ear and in some places ripening. <i>Sarad</i> rice weeded and growing well. Prospect of rice crops satisfactory. Price of rice unchanged. Public health generally good except that a few cases of cholera reported from the interior. Rivers rising again.
	37 Gajole " 27, "	0.80	
	37 Santal Pargana, " 27, "	2.65	Weather—cloudy with very little rain. Weeding and transplantation of <i>sarad</i> crop going on. <i>Beali</i> is being harvested. Common rice 24 seers 1 chittack per rupee in the sudder sub-division and 18 seers 15 chittacks in the Khorda sub-division. Cases of cholera still reported.
	Dooghur " " "	0.98	
	Godda " " "	1.17	Weather—hot and cloudy. <i>Beali</i> crop in flower. Weeding and transplanting of <i>sarad</i> crop going on. Prospects of crops generally good. A few cases of cholera still reported. Public health good.
	38 Pakour " " "	1.26	
OKINHA.	38 Rajmehal " " "	1.64	Weather—fair. <i>Beali</i> rice in ear and in some places ripening. <i>Sarad</i> rice weeded and growing well. Prospect of rice crops satisfactory. Price of rice unchanged. Public health generally good except that a few cases of cholera reported from the interior. Rivers rising again.
	38 Cuttack, Aug. 26, '87	3.77	
OBISIA DIV.	39 Pournah " 25, "	2.49	Weather—cloudy with very little rain. Weeding and transplantation of <i>sarad</i> crop going on. <i>Beali</i> is being harvested. Common rice 24 seers 1 chittack per rupee in the sudder sub-division and 18 seers 15 chittacks in the Khorda sub-division. Cases of cholera still reported.
	Khorda " " "	2.97	
	40 Balasore " 26, "	2.43	Weather—hot and cloudy. <i>Beali</i> crop in flower. Weeding and transplanting of <i>sarad</i> crop going on. Prospects of crops generally good. A few cases of cholera still reported. Public health good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Aug. 26, '87	1.35	Weather—bright. Moderate rain; more rain wanted in some parts of the district. Transplanting of rice completed over the greater part of the district. All crops doing well. General health fair.
42	Lohardugga " 27, "	1.79	Weather—seasonable. Fair amount of rain during the week. Prospects of crops continue favourable. Prices as before. Cholera still prevails; otherwise general health good.
	Palamow " " "	0.50	
43	Singbhoom " 26, "	1.99	Weather—cool. Some showers. Prospects of crops good. Showers during the week were much needed and did great good. General health good.
44	Manbhoom " 27, "	3.24	Weather—cool, with rain towards the end of the week. Prospects of all crops good. Public health good, except at Paru, where there is fever.
	Govindpore " " "	0.36

Representation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the past 30 years. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The rainfall is the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional stations for the period in question during the 30 years. A rainy day is one on which at least 0.01 inch of rain has fallen.

for the week ending Friday, the 26th August 1887.

DISTRICT OBSERVATIONS.															Representative station.	DISTRICT.	METEOROLOGICAL DIVISION.
Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	RAINFALL.														
			Of week.			Since 1st of month.			Since 15th May 1887.			Average number of rainy days.	Normal number of rainy days.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 30th August 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
26TH OF AUGUST 1887.**

THE most prominent feature in the meteorology of week ending the 19th of August had been the formation of a feeble cyclonic storm in the northern half of the Bay, which had been remarkably persistent for some days, but which, on the morning of the 19th, was crossing the west coast of the Bay, the centre passing a little to the south of Gopalpore. On the morning of the 20th, it had practically entirely passed inland towards the Central Provinces, where it subsequently filled up. With the advance of the feeble depression inland, it then became possible for the monsoon winds to again flow over Bengal, and rain became pretty general in Orissa, South-West Bengal, and East Bengal on the 20th, but the general rainfall only reached North Bengal and the greater part of Behar and Chutia Nagpur on the 22nd. Thus, at the commencement of the week, the conditions over the Province were fairly normal, and up till its close the principal changes have been in the alternate strengthening and falling off in the two branches of the monsoon current. Up till the 24th the whole Province was principally influenced by the current blowing from the Bay of Bengal, but this, considered as a rain-bearing current, was somewhat weak. On the 24th, however, winds, which had been previously strongly easterly and south-easterly, became more southerly, and it was evident that the Bengal current was commencing to be driven back by the Bombay current. On the 25th the winds blowing over Bengal had become strongly westerly and south-westerly at all stations except those in the extreme east and north of the Province, and on this day the rain-bearing current from the Bay of Bengal was strongly deflected towards the east coast of the Bay; and with the commencement of these westerly winds rainfall almost ceased over the greater part of the Province, except in North Bengal. Owing, however, to the interaction between the two wind currents, on the 26th there was a distinct cyclonic circulation of winds set up over a part of South-East Bengal, and this was accompanied by the formation of a feeble area of low pressure; but the depression and wind circulation were exceedingly feeble on this day. At the close of the week, therefore, conditions were becoming more favourable for rainfall in the southern districts.

It will therefore be seen that, for a considerable part of the week, conditions have been fairly favourable for rainfall over a large portion of the Province. The amounts received, however, generally have not been large, for the current blowing was, in the first place, weak, and it was subsequently strongly deflected towards the east coast of the Bay. Except therefore in Orissa, which was subject to the actual passage of the depression above alluded to, the rainfall has generally been decidedly below the normal, though not quite so largely in defect as it was during the previous week.

Pressure.—The mean pressure during the previous week had been, to a great extent, influenced by the existence of the depression off the south coast of Orissa, and pressure was slightly above the normal in the south-western districts, and rather largely above it elsewhere. With the passage of the depression westwards, pressure continued to fall for the first two or three days of the week, particularly in the western and south-western districts; but on the 23rd pressure rose rapidly in South-West Bengal, where in several instances the rise equalled a tenth of an inch; while pressure fell in South Behar. Pressure generally rose on the 24th: the changes were variable on the 25th, while on the 26th pressure again fell over the whole Province, the fall being largest at the south-eastern, eastern, and southern stations. The tendency of the changes during the week has therefore been to make pressure far more nearly normal, though pressure on the average has still been comparatively low in the west and south-west of the Province. Thus, in South Behar, Chutia Nagpur, Orissa, and South-West Bengal, the mean pressure for the week has been slightly, though distinctly, below the normal, while elsewhere it has been slightly above the normal. For the whole Province of Bengal, therefore, the mean pressure has been very nearly normal. In Assam also the mean pressure for the week has been nearly normal, the variation at no station exceeding a few thousandths of an inch, while the average pressure for the whole of Assam is absolutely normal.

Temperature.—The variations of temperature throughout the week have generally been small, and the average temperature in each district has been very nearly normal, and the variation from the normal in no case equals half a degree. For the whole of Bengal the mean temperature of the week has not varied from the normal by so much as a tenth of a degree. In Assam, on the other hand, the mean temperature for the week has been 0.3° in excess of the normal.

Rainfall.—The actual rainfall during the week has been heaviest in East Bengal, which has received an average of three inches. In Orissa the fall has averaged rather more than two-and-a-half inches; in South-West Bengal, North Bengal and Chutia Nagpur it has averaged from one-and-a-half inches to two inches, and in Behar it has averaged between one and one-and-a-half inches. Compared with the normal, and expressed as a percentage of that amount, Orissa has received 104 per cent.; South-West Bengal 58 per cent.; East Bengal 92 per cent.; North Bengal 54 per cent.; North Behar 58 per cent.; South Behar 38 per cent.; and Chutia Nagpur 53 per cent. Taking these districts as having an equal value in the calculation, the rainfall of the whole Province for the week may be said to have averaged 67

per cent. of the normal. The following districts have received exceptionally small falls throughout the week:—Maldah, Rungpore, Chumparan, Sarun, Shahabad, Gya, Patna, (which has averaged less than a tenth of an inch), and South Bhagulpore and Monghyr.

In the Nuddea district Kishnaghur appears for the greater part of this month to have been a centre of exceptionally light rainfall, and so far as the returns show, it would appear that this station has only received a fall of 2.76 inches since the commencement of the month, while the normal fall would be 10.43 inches. The remainder of the Nuddea district shows a fall much more nearly normal, and generally averaging from about three-fourths to a fall actually above the normal at Meherpore. Sherpore, in the Bogra district, is also another station which has received very little rain since the 1st of the month.

In Assam, the following are the amounts which have been received during the week:—At Sibsagar 5.82 inches, at Silchar 3.04 inches, and at Dhubri 0.29 inch.

The following table gives the summary of the temperature and rainfall data of each of the eight meteorological divisions of the province for the week ending Friday, the 26th of August 1887:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.										
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1897.

The mean pressure of the seven days ... 29.617
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.610

The total number of hours of bright sunshine ... 33.9
The maximum possible number of hours of sunshine ... 89.0

The mean temperature of the seven days ... 82.6
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83.0
The extreme variation of temperature ... 13.1
The maximum temperature ... 89.8

The highest velocity of the wind in one hour ... 11
Miles.

The highest pressure of wind on one square foot ... Not measureable.

The mean relative humidity ... 87
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 87

The total fall of rain from 21st to 27th August 1887 ... 3.09
The average fall of the corresponding period for 24 years, S. G.'s Office ... 3.11
The total fall from 1st January to 27th August 1887 ... 45.29
The average fall of the corresponding period for 24 years, S. G.'s Office ... 47.13

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Alipore Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, t thunder, d drizzling rain.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

Results of the Thermometrical Observations taken at the Meteorological Office,
Chowringhee, from 21st to 27th August 1887.

The mean temperature of the seven days ... 82.1
The extreme variation of temperature ... 15.2
The maximum temperature ... 92.0

The mean relative humidity ... 89 %
The total fall of rain from 21st to 27th August 1887 ... 3.46 inches.

The mean temperature and humidity are obtained by applying to the mean of the 10a, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ; A. PEDLER,
The 29th August 1887. for Offg. Meteorological Reporter to the Govt of India.

MEMORANDUM.

THE mortuary returns from the districts in Bengal for June 1887 disclose—

1. That 112,612 deaths were registered, or at the rate of 20·40 per 1,000 of the population, amounting to 66,163,884, against 25·41 per 1,000 in the preceding month, and 15·96 per 1,000 in the corresponding month of the past year, indicating, as compared with the last-named period, a considerable improvement in the number of deaths recorded.

2. That the highest casualty-rates were returned from the following districts:—

<i>Districts.</i>			<i>Districts.</i>		
		Ratio per mille.			Ratio per mille.
Chumparun	...	45·12	Shahabad	...	34·80
Gya	...	40·68	Jalpaiguri	...	34·56
Puri	...	38·16	Bhagulpore	...	27·48
Darjiling	...	36·60	Lohardugga	...	27·24
Monghyr	...	36·60			

3. That referring to the incidence of the diseases specified below, it is seen that cholera prevailed with much greater severity during the month under notice than during the corresponding month of the preceding year, but that the death-rates from the rest of the diseases, excepting that from injury which remained stationary, exhibited only fractional variations:—

			Ratio per mille during—	
			June 1887.	June 1886.
Cholera	3·84	·60
Small-pox	·07	·08
Fever	12·60	11·76
Bowel-complaints	·72	·60
Injury	·60	·60
Other causes	2·40	2·16

4. That while the following districts returned conspicuously high mortality from cholera and fever, the rest of the districts did not exhibit any noticeable severity from the other diseases indicated above, excepting Darjiling, where 11·16 per 1,000 of the population died from bowel-complaints, and Puri, where 10·36 per 1,000 were carried off by the maladies classed under head of "Other causes":—

<i>Cholera.</i>			<i>Fever.</i>		
		Ratio per mille.			Ratio per mille.
Chumparun	...	26·76	Jalpaiguri	...	28·20
Puri	...	20·40	Monghyr	...	23·64
Gya	...	16·32	Rajshahye	...	20·88
Shahabad	...	12·84	Darjiling	...	20·88
Lohardugga	...	7·92	Dinajpur	...	20·76
Monghyr	...	7·80			
Mozufferpore	...	6·96			
Durbhanga	...	6·84			
Saran	...	5·88			
Balasore	...	5·52			
Jalpaiguri	...	4·92			
Patna	...	4·20			
Bhagulpore	...	3·36			
Hazaribagh	...	2·88			

5. That with regard to mortality referable to *Sex*, *Class* and *Age*, the rates stood as follows:—

<i>According to Sex.</i>			<i>According to Class.</i>			<i>According to Age.</i>		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	22·32	Christians	...	10·92	Under 1 year	...	118·32
Females	...	18·48	Hindus	...	21·84	1 and under	5 years	26·52
Ratio of male deaths to every 100 female deaths	...	118	Mahomedans	...	17·40	5 " "	10 " "	12·12
			Budhists	...	13·80	10 " "	15 " "	10·20
			Other classes	...	21·72	15 " "	20 " "	14·16
						20 " "	30 " "	14·52
						30 " "	40 " "	15·84
						40 " "	50 " "	18·72
						50 " "	60 " "	25·80
						60 years and upwards	...	37·44

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 29th August 1887.

Statement showing the Results of the Registration of Deaths in the Districts in Bengal for the month of June 1887.

DIVISIONS.		DISTRICTS.		POPULATION.		DEATHS FROM—										RATIO PER 1,000 OF POPULATION PER ANNUM.		COMPARISON WITH PREVIOUS PERIODS.		DEATHS AMONG—		SEX.		Ratio of male deaths to every 100 female deaths.

MEMORANDUM.

From the annexed table, exhibiting the vital statistics of the principal Municipalities in Bengal, for the week ending 13th August 1887, it appears—

1. That the birth-rate in these Municipalities amounted to 16·7 per 1,000 of population against the same ratio in the preceding week ending 6th August, and the death-rate to 28·6 per 1,000 against very nearly the same proportion, viz., 28·4 per 1,000.

2. That births and deaths were reported to have been recorded at the highest rates in the following Municipalities :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Comillah	46·2	Arrah	89·7
Arrah	39·5	Gya	58·7
Durbhanga	32·3	Puri	54·6
Gya	29·4	Beaulcah	39·4
				Serampore	37·3
				Burdwan	35·1
				Purneah	34·6
				Suburbs of Calcutta	33·5
				Patna	31·1
				Comillah	30·8
				Bhagulpore	29·9

3. That, as compared with the outcome of the preceding week, bowel-complaints alone exhibited noticeable enhancement of mortality, the fatal results from the other diseases exhibiting only fractional differences, and small-pox presenting no death; *vide* figures given below :—

				Ratio per mille during the weeks ending—	
				13th August 1887.	6th August 1887.
Cholera	5·4	6·0
Small-pox	1
Fever	10·4	10·2
Bowel-complaints	5·5	3·6
Injury	3	6
Other causes	7·0	7·9

4. That the following Municipalities appear to have suffered the most from the diseases specified in the above table (excepting small-pox, from which, as before stated, no death was reported to have occurred, and injury, the casualties from which were nowhere above normal) :—

Cholera.		Fever.		Bowel-complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah	39·5	Comillah	27·0	Arrah	16·7	Gya	17·1
Puri	21·0	Arrah	25·1	Serampore	13·7	Puri	12·6
Gya	18·4	Purneah	24·2	Hughli	13·4	Suburbs of Calcutta	12·0
Burdwan	18·3	Beaulcah	23·6	Puri	12·6	Serampore	11·8
Patna	7·1					Monghyr	10·8
Bhagulpore	4·5						

5. That the mortality of the week classified under the heads of *Sex*, *Class* and *Age*, stood as follows :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	28·2	Christians	...	17·4	Under 1 year	...	229·8
Females	...	29·3	Hindus	...	30·5	1 and-under 5 years	...	57·8
Ratio of male deaths to every 100 female deaths	108		Mahomedans	...	24·8	5 " " 10 "	...	23·8
						10 " " 15 "	...	16·3
						15 " " 20 "	...	15·7
						20 " " 30 "	...	15·2
						30 " " 40 "	...	15·9
						40 " " 50 "	...	18·5
						50 " " 60 "	...	32·2
						60 years and upwards	...	52·3

R. LIDDERDALE, M.D., *Deputy Surgeon-General*,

The 29th August 1887.

Sanitary Commissioner for Bengal.

Mortality in the Principal Municipalities in Bengal during the week ending 13th August 1887.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remaining as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of an classification.

INCREASES.

Betelnuts	453 tons.
More than half the increase under this head was contributed by Khulna and the Bengal Central Flotilla, and the remainder by Naryangunge and Serajgunge.	
Jute	137 tons.
The increase is comparatively trifling.	
Grain and Pulse	6,966 tons.
All stations north of Bagoola show large increases in despatches to the port when favourable prices prevailed.	
Kerosine oil	346 tons.
Increase in demand for up country consumption.	
Railway Materials	609 tons.
Repairs and renewals.	
Salt	575 tons.
Despatches to upper Bengal and Steamer stations.	
Seeds	439 tons.
Improved market.	
Tobacco	923 tons.
From the Northern Bengal State Railway.	
Hay, Straw and Wooloo	343 tons.
From the Southern section exclusively.	

DECREASES.

Coal and Coke	3,587 tons.
This traffic is now carried into Calcutta and Chitpore via Naihati by East Indian Railway local trains, and does not appear in Eastern Bengal State Railway statistics.	
Rice	2,345 tons.
Continued depression in prices for this staple.	
Sugar	619 tons.
Falling off in despatches from Musshiganj, Alamdanga, Koochta and Kumarkhali.	

CALCUTTA, the 30th July 1887.

Bengal Central Railway.

Abstract of principal commodities carried over the Bengal Central Railway during the month of May 1887, as compared with the same month of the previous year.

STAPLES.	1887.		1886.		Total.		Increase.	Decrease.

F. P. QUINLAND, Examiner of Accounts.

CALCUTTA, the 8th July 1887.

INCREASES.

*Betelnuts 267 tons.
 The traffic in this commodity, which is principally exported to British Burmah is confined almost exclusively to Khoolna and the Bengal Central Flotilla Stations.
 Coal and coke 1,109 tons.
 For Railway and Flotilla requirements.
 Grain and Pulse 711 tons.
 Favourable season and advantageous rates in the Calcutta market.
 Salt 167 tons.
 From Chitpore and Calcutta for Gopalsnagar, Rupdia, &c.

DECREASES.

Railway materials 365 tons.
 Completion of works generally.
 Sugar 464 tons.
 Depression in trade. The falling off in despatches from Jhikergache above being 4,521 maunds.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate Return of Traffic for week ended 20th August 1887, on 1,519 miles open.

W. C. MACPHERSON,

Offg. Secretary to the Government of Bengal.

CURTAILMENT OF ANNUAL REPORTS.

* No. 4417, dated Simla, the 23rd August 1887.

RESOLUTION—By the Government of India, Dept. of Finance and Commerce.

Read the undermentioned papers :—

From the Government of the Punjab, No. 394S., dated the 22nd June 1885, and enclosures.

Resolution in the Home Department, No. ^{37A.} 1392-1001, dated the 12th August 1885.

Circular letter to all Local Governments (except the Punjab), No. 2650, dated the 28th August 1885.

From the Chief Commissioner of Assam, No. 5603, dated the 25th September 1885, and enclosure.

From the Chief Commissioner of Coorg, No. ¹¹⁵⁰ 132, dated the 29th September 1885, and enclosures.

From the Chief Commissioner of British Burma, No. 687-145N., dated the 30th September 1885, and enclosures.

From the Chief Commissioner of the Central Provinces, No. ^{3683A.} 161, dated the 19th September 1885, and enclosures.

From the Resident at Hyderabad, No. 21G., dated the 28th January 1886, and enclosures.

From the Government of the North-Western Provinces and Oudh, No. ¹⁶⁰ 111-783, dated the 13th February 1886, and enclosures.

From the Government of Bombay, No. 992, dated the 13th March 1886.

From the Government of Madras, No. 482B., dated the 14th June 1886, and enclosures.

From the Government of Madras, No. 1456, dated the 12th July 1886, and enclosures.

From the Government of Bengal, No. 1534T.—R., dated the 3rd November 1886, and enclosures.

From the Government of Bengal, No. 2798, dated the 30th December 1886.

Resolution in the Home Department, No. ²⁸ 1570-36, dated the 15th July 1887.

RESOLUTION.—The remarks and orders contained in the Resolution of the Home Department of 15th July above quoted, which are confined to reports furnished to that Department, seem to apply equally to the annual* reports upon subjects administered in this Department. The general opinion of the Local Governments who were consulted on the subject is opposed to any considerable curtailment of reports bearing on revenue matters.

Opium.
Salt.
Stamps.
Excise.
Assessed taxes.

Customs.
Mints.
Trade.
Joint-Stock Companies.
Post Office.

The administration of Provincial revenues is left so much in the hands of Local Governments, and they are also financially so greatly interested therein, that it is not, in the opinion of the Government of India, expedient to restrict the Provincial authorities with respect to the information they may consider it desirable to collect and to place on record regarding them.

2. In the case of Opium and Salt Administration Reports, the fiscal interests involved are of such great importance that, even if the fullest information were not necessary for the purposes of the Local Governments, annual reports would be required by the Government of India in order to enable it to watch the administration of the revenue. These reports should therefore be as full as possible without being prolix, and should be furnished to the Government of India annually, as at present.

3. As regards the reports on Stamps, the Governor-General in Council has no objection to their being prepared and submitted triennially by any Local Government which considers this sufficient. Statistical information only would in this case be submitted in the intermediate years. The reports on the External Land Trade may also be submitted triennially in the same way, the monthly statistics of the trade being transmitted to this Department as at present.

4. The remarks contained in paragraph 5 of the Home Department's Resolution on the necessity of methodical arrangement are specially applicable to the reports submitted to this Department. In reports bearing on revenue matters and trade, comparisons with past years are of special value; but these are rendered difficult unless a systematic arrangement is observed in the subjects dealt with.

5. The Excise reports should in all cases be prefixed by a concise description (which may be repeated from year to year) of the various systems on which the excise is administered in the province concerned, and the extent to which each system applies. There is necessarily in such matters much diversity of practice, and the value of the reports is occasionally diminished by the use of technical terms, whose precise signification is little known beyond the limits of the province, and is often different in different provinces.

ORDER.—Ordered that a copy of this Resolution be forwarded to all Local Governments and Administrations, and to the Heads of Departments under the Department of Finance and Commerce, for information.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 3rd September 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts			
BURDWAN DIV.	1 Hardwan. Sept. 3, '87	4.60	Weather—disturbed. Crop prospects continue fair, but more rain much wanted in parts of Culna and Cutwa. <i>Aus</i> and jute being cut. Price of rice somewhat lower. Cholera and fever continue in Sudder; public health elsewhere good.
	Culna ..	0.90	
	Cutwa ..	Nil	
	2 Hunkoor. " 3, '87	0.50	Weather—rather dry for the season. Transplantation of <i>amun</i> rice finished, but rain wanted everywhere, and the plants in thana Bishenpur are reported to be damaged for want of sufficient moisture. Indigo is being manufactured. Prices have slightly fallen. Public health good.
	Bishenpur ..	0.77	
	3 Beerbhoom " 3, "	2.12	A prolonged break in the rains ended on the 2nd instant. Weather now cool and showery. Young transplanted paddy has suffered severely from the prolonged drought, but it is hoped that no permanent mischief has been done to the crop. Jute is being cut. Sugarcane looks very well. Cholera reported from several villages; otherwise public health good.
	Rampur Haut ..	0.85	
	4 Midnapore " 3, '87	2.13	Weather—muggy. State and prospects of crops good.
	5 Hooghly " 3, "	1.34	
	Serampur ..	0.57	Weather—rather dry and sultry. Transplanting of winter rice complete. <i>Aus</i> paddy nearly ripe. More rain wanted, especially to the west. A little fever reported.
Jehanabad ..	2.22		
Howrah " 3, "	0.79	Weather—cloudy and sultry. Reaping of <i>aus</i> and jute in progress. Transplanting of <i>amun</i> rice nearly complete. More rain required. Some fever in the south of the district.	
Oolooberiah ..	1.32		
Central Districts			
PRESIDENCY DIV.	6 24-Perkhs., Sept. 3, '87	1.10	Weather—hot with occasional showers. Rainfall insufficient. Prospects of <i>aus</i> , jute and sugarcane good. Prospects of <i>amun</i> not so favourable for want of sufficient rain, particularly in Bassirhat sub-division. Harvesting of <i>aus</i> continues. Health of people fairly good.
	7 Nuddea " 3, "	2.53	
	Kushtea ..	0.74	Weather—generally warm and sunny; occasional light showers. <i>Aus</i> rice nearly harvested; outturn fair. <i>Amun</i> has suffered from want of water for transplanting. Jute and sugarcane doing well. Public health fair. Flood level slightly risen.
	Meherpur ..	1.13	
	Chundanga ..	0.91	
	Ranaghat ..	0.98	
	8 Khoolna " 3, '87	2.33	Weather—seasonable. <i>Aus</i> paddy is being harvested. Transplantation of <i>amun</i> getting on rapidly on high lands. Public health generally good.
	9 Jessore " 3, "	1.51	
	Jhenidah ..	0.2	Weather—hot with occasional showers. <i>Amun</i> wants rain. Reaping of <i>aus</i> , jute, and indigo going on. Prospects good. Rivers rising. Public health generally good.
	Magurah ..	1.64	
	Narail ..	0.42	
	Bongong ..	2.92	
	10 Moorsheadabad " 3, '87	1.95	Weather—hot; rain at intervals. Harvesting of <i>bhadai</i> paddy almost over. <i>Amun</i> paddy growing well. Sowing of <i>til</i> commenced in some places. Sugarcane and jute promising. Public health good.
	Lalbah ..	2.55	
	Kandi ..	0.11	
	Jungipur ..	2.33	
	11 Binaspur " 3, '87	2.76	Weather—cloudy. Standing crops good. <i>Bhadai</i> and jute being harvested. Transplantation of <i>amun</i> still progressing. Rice 20 to 26 seers per rupee.
	Thakurgaon ..	1.79	
	12 Rajshahi " 3, '87	4.21	Weather—cloudy with occasional showers. Cutting of <i>aus</i> paddy continues. Prospects of crops continue good. Transplanting of <i>ganja</i> seedlings has commenced. Fever rather prevalent.
	Natore ..	1.85	
Nowgong ..	1.55	Prospects of crops fair. Prices rising. Fever prevalent.	
13 Rangpur " 3, "	2.09		
Kurigram ..	1.12	Weather—cloudy. Rain on the 2nd has been very beneficial to <i>amun</i> , the state and prospects of which are now good. Public health fair. A few cases of cow-pox reported from Sherpur.	
Nilphamari ..	1.82		
Gaibanda ..	0.71		
14 Hogra " 3, '87	1.32		
Sherpur ..	0.47	Weather—seasonable. General health and prospect of crops good. Rivers risen very high.	
Nowkhilla ..	2.12		
15 Pabna " 3, '8	1.00	Weather—seasonable. State and prospects of crops good.	
Serajgunj ..	0.21		
16 Darjeeling " 3, '87	4.31	Weather—cloudy with rain. Transplantation of winter rice continues. The heavy rain that has fallen this week has done much good. Harvesting of <i>bhadai</i> not finished yet. Cattle-disease reported from Myungoree and Rajgunge. Public health good.	
17 Julpigoree " 3, "	16.82		
Eastern Districts.			
Dacca DIVISION.	18 Dacca, Sept. 3, '87	1.04	Weather—seasonable. Harvesting of jute continues. <i>Aus</i> paddy nearly reaped. Transplantation of winter crops still going on. <i>Amun</i> thriving. Rivers subsiding. Prospect of crops and public health good.
	Manickgunge ..	0.41	
	Munshigunge ..	1.11	Weather—cloudy and rainy. Harvesting of <i>aus</i> nearly completed. Prospects of <i>amun</i> good. Jute-steeping in progress. General health good.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BFNGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong, Sept. 6, '87	0.94	Weather—hot. <i>Amra</i> harvested; outturn good. <i>Amra</i> still being transplanted. Prices high. Cholera reported; public health otherwise good.
	23 Noakholly	Report not received.
	24 Tipperah, " 1, '87	3.05	Weather—seasonable; but hotter than it ought to be owing to scanty rainfall. Some rain has fallen, but a great deal more is much wanted.
	Brahmanbariah	1.52	
	Chandpur	1.50	
CHITTAGONG DIV.	25 Chittagong Hill Tracts, Aug. 30, '87	1.84	Weather—cloudy and sunny throughout the week. A shower of rain on the 29th. Early <i>joom</i> paddy ripening. Cotton doing well. Transplanting in low lands still continues, but nearly complete.
	Hill Tipperah, " 31, "	3.19	Weather—rainy. Transplantation of <i>amra</i> paddy yet continues. Sugarcane and <i>jum</i> crops doing well. Public health good.
BEHAR.			
PATNA DIV.	26 Patna, Sept. 3, '87	0.67	Weather—hot and cloudy. Rain urgently wanted in many parts for trans-plantation of rice seedlings; those already transplanted are suffering. Har-vesting of <i>bhadoi</i> crops going on. Cholera still reported from Behar and Dinapore, but is decreasing.
	Behar	2.00	
	Barh	
	27 Gya	Report not received.
	28 Shahabad, " 3 "	1.95	Weather—fair in the beginning of the week, but rainy in the latter part. Paddy transplantation going on actively, and with the recent rain the opera-tion will be more vigorously pushed on. <i>Bhadoi</i> crops are being harvested, and prospects are satisfactory except in Bhabua. Cholera is fast abating, but still lingers here and there. Fever reported from Bazar and Sasseram. Prices stationary.
PATNA DIV.	Buxar	0.52	
	Sasseram	Nil	
	Bhabuah	0.40	
	29 Darbhanga, " 3 "	2.66	Weather—cloudy. Prospects of <i>bhadoi</i> continue very favourable. Harvesting of <i>makai</i> and <i>marua</i> in progress. Transplantation of rice still going on. Indigo manufacture not yet over. Price of common rice averages 18 seers per rupee. Public health generally good.
	30 Mozafferpur, " 3, '87	1.18	Weather—mostly hot and rainless; now cloudy and rainy. Harvesting of <i>bhadoi</i> crops commenced. Cholera still occurs in places.
BEAUFORT DIV.	Hajipur	0.49	
	Sitamarhi	1.39	
	31 Saran, " 3 "	0.08	Weather—bright and close. A smart shower this morning (3rd). Prospects of crops continue good. Cholera abating.
	Sewan	0.51	
	Gopalgunge	0.60	
BEAUFORT DIV.	32 Chhapra, " 3 "	7.35	Weather—rainy with heavy showers. Prospects of crops much improved by the rainfall of the week. Transplantation of <i>aghani</i> still going on in some parts of the district, where there had been lack of rain. Harvesting of early <i>bhadoi</i> has begun. Public health fair. Prices stationary.
	Bettiah	2.54	
	33 Monghyr, Sept. 3, '87	0.46	Weather—very hot and sultry. Reaping of <i>bhadoi</i> crops going on briskly. Winter rice growing well, but rain much wanted. The Ganges rising again. A little cholera in the Monghyr town, Kharakpore and Beguserai; otherwise general health good.
	Beguserai	0.30	
	Jamui	1.19	
BEAUFORT DIV.	34 Bhagalpur, 3 "	0.82	Weather—sultry in south, seasonable in north. <i>Bhadoi</i> harvest yielding fairly in the north of the Ganges, and late rice there also doing well. In the centre of the district want of rain felt, but good rain falling at the time of report.
	Scoopool	5.56	
	Banks	2.89	
	35 Purneah, " 3 "	4.58	Weather—early in the week clear and hot; latterly cool, rainy and cloudy. All crops doing well. <i>Bhadoi</i> giving fair outturn. Transplantation of <i>aghani</i> nearly completed.
	Kishengunge	4.42	
BEAUFORT DIV.	36 Maldah, " 3 "	0.42	Weather—fine, and too dry up to 1st instant; since then heavy rain. Upwards of 7 inches fallen to-day (3rd), not accounted in this return. <i>Bhadoi</i> harvest going on with good outturn. Rain has done good to winter paddy, the prospects of which are favourable. Common rice 21 seers per rupee. Public health generally good.
	Chanchal	1.45	
	Sibgunge	2.05	
	Gujole	0.40	
	37 Sonthal Pergah, " 3 "	2.32	Weather—hot and dry. More rain wanted for transplanting paddy crops. Rain on 2nd has done much good. General health good.
BEAUFORT DIV.	Deoghur	0.75	
	Godda	2.48	
	Jamtara	0.82	
	Pakour	5.07	
	Rajmehal	1.02	
ORISSA.			
ORISSA DIV.	38 Cuttack	Report not received.
	39 Poonch, Sept. 1, '87	2.25	Weather—cloudy with very little rain. Weeding and transplanting of <i>sarad</i> crop going on except in the Chilka Tracts. Common rice 23 seers 8 chit-tacks per rupee in the Sudder sub-division and 20 seers 8 chittacks in the Khorda sub-division. Cases of cholera still reported.
	Khorda	1.76	
ORISSA DIV.	40 Balasore, " 2, "	2.67	Weather—cloudy and seasonable. <i>Beati</i> crop ripening. Weeding of <i>sarad</i> crop advancing. Prospects of crops good. Rain wanted in parts of Balaipal thana. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
CHOTA NAGPORE DIV.	41 Hazaribagh, Sept. 2, '87	0.77	Weather—bright; occasionally cloudy. Rain very much wanted over most of the district. Indian-corn, <i>goondli</i> and <i>marua</i> being harvested. Other crops doing well. General health fair.
	42 Lohardugga, " 3 "	2.83	Weather—hot. More rain wanted. Prospects of crops continue good. No change in prices. Cholera abating.
	Palamow	0.51	
	43 Singbhum, " 2 "	2.09	Weather—fairly cool. Prospects of crops fair, but in many parts more rain required. Lands for <i>rubber</i> crops being prepared. Indian-corn being cut. General health good.
	44 Manbhum, " 3 "	1.75	Weather—close and cloudy. More rain much wanted in almost all parts of the district. Autumn crops being harvested; outturn about 12 annas. Fever prevalent in Baumundi.
	Govindpur	0.28

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 6th September 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
2ND OF SEPTEMBER 1887.**

At the close of the previous week a feeble area of low pressure had formed over South-East and South Bengal, which was accompanied by a distinct, though feeble, cyclonic circulation of winds, and thus conditions had become distinctly more favourable for rainfall in the south of the province, than they had previously been. On the 27th the very feeble depression had moved in a westerly direction and was in South-West Bengal, and moving towards Chutia Nagpur, and it was again accompanied by the distinct though feeble wind circulation. In connection with this feeble whirl, heavy rain was falling at many of the southern stations, and amounts of two inches and upwards were reported at Saugor Island, Diamond Harbour, Jehanabad, Burdwan, Raipur in the Bankoora district (5·65 inches) and Bongong; and in Chutia Nagpur at Rauchi, Ghatsila, Barrabhoom and Jhalda, while in the north of the province the following stations also received very heavy rain:—Matabhanga, Kissengunge, Soopool, Mahua, Patna, Banka and Nanihat. On Sunday, the 28th, the depression had disappeared in a westerly direction, and a moderate south-easterly and southerly monsoon current set in from the Bay of Bengal, but rainfall on this day was usually confined to a few light showers, and there was no general rain in any district. These conditions continued practically unaltered on the following day, and though during the whole of this time a fairly strong monsoon current was blowing at the head of the Bay and in Ceylon, as shown by wind velocities at Saugor Island and Galle, yet rainfall over almost the whole of Bengal was comparatively light. On Tuesday, the 30th, however, though the general conditions had scarcely altered, heavy and rather general rain commenced in the northern districts of the province, and on this day Protapgunge, in the North Bhagulpore district, received 7·35 inches and Buxa 4·21 inches, and over the southern districts moderate showers were rather numerous. This heavy rain in the north of Bengal on the 30th set up a slight cyclonic circulation of winds, which was distinctly noticeable on the 31st, and pressure also became slightly low over the central and northern parts of the province, and with these favourable conditions for rainfall, particularly heavy rain was received over a considerable part of North Bengal. On this day Julpigoree reported the excessive fall of 11·47 inches, Mickiungge one of 7·75 inches, Pallacotta 7·51 inches, Protapgunge 5·11 inches and Kaliagunge 4 inches, while moderately heavy showers became pretty numerous over the whole province. On the 1st of September the meteorological conditions had scarcely changed, except that the rainfall rather decreased in quantity in the northern districts, but the area of rainfall extended, and rain was more general than on the previous day, and on the last day of the week the area of rainfall again extended, and the great majority of the stations in the province received moderate rain. The only other noticeable feature in the meteorology of the 2nd was that a westerly element had appeared in some of the wind directions, and this was the only occasion during the week when the influence of the Bombay current was at all felt in Bengal.

Pressure.—During the previous week the mean pressure over the province had been very nearly normal. At the commencement of the present week, the changes were governed by the movement of the very slight depression, but with its disappearance from the province on the 28th, pressure commenced to rise steadily up till the 1st of September, when a slight reaction set in, which was, however, again followed by a rise on the 2nd. It will thus be seen that the mean pressure for the week has been above the normal over the greater part of the province, and taking only those stations into consideration from which observations have been received for several years, and which therefore afford reliable averages, the mean pressure of the whole province of Bengal for the week has been 0·022 inch in excess of the normal. In Orissa, however, pressure has been very slightly below the normal, while in the north of the province, at Purneah, there has been an excess of 0·044" and at Durbhunga one of 0·035". In Assam, at Sibsagor, the mean pressure has been 0·016" in defect of the normal, at Silchar it has been 0·023" in excess, and at Dhubri 0·026" in excess.

Temperature.—The variations of temperature during the week have again not been very large, and the mean temperature in no case differs from the normal by as much as one degree. Generally temperature has been in excess of the normal, and the mean average temperature for the whole of Bengal is only about 0·4° in excess of the normal. In Assam, on the other hand, the mean temperature has been in defect of the normal by 0·5°.

Rainfall.—The general distribution of the rainfall as to time and district has already been referred to under the meteorological summary, and it will have been seen that the northern districts have received very heavy rain, while the remainder of the province has received only moderate general rain. Thus North Bengal has received an average fall of nearly four inches of rain, and North Behar an average of a little more than three inches. South-West and East Bengal and Chutia Nagpur have received between one-and-a-half and two inches, and Orissa and South Behar between one and one-and-a-half inches. Compared with the normal falls, and expressed as a percentage of this amount, the falls in the various districts during the week have been in Orissa 78 per cent., in South-West Bengal 76 per cent., in East Bengal 56 per cent., in North Bengal 105 per cent., in North Behar 111 per cent., in South Behar 51 per cent., and in Chutia Nagpur 72 per cent.

Taking these districts as having an equal value in the calculation, the rainfalls of the whole province may be said to have been equal to 78 per cent. of the normal.

As before indicated, the rainfall in the following districts has been very largely in excess of the normal :—Julpigoree, Purneah, and Ohumparun ; while the following districts have received falls largely in defect of the normal :—Bankoorah, Furreedpore, Dacca, Oomilla, Mymensingh, Pubna, Maldah, Mozufferpore, Sarun, Shahabad, South Bhagulpore, Monghyr, and Sonthal Pergunnahs.

The following table gives the summary of the temperature and rainfall data of each of the eight meteorological divisions of the province for the week ending Friday, the 2nd of September 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.

The greatest fall in 24 hours	1.97	1st	
Days.			
The number of rainy days in the month	23		
The average number of rainy days in August from 24 years' registers	25		
°			
The mean maximum equilibrium temperature of solar radiation during the month	147.3		
The mean difference of sun and air temperatures	59.8		
The greatest sun temperature	156.7	27th	
The greatest excess of sun over air temperature	69.2	27th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	75.4		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2.6		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	4.6	17th	
Miles.			
The mean movement of the wind per day	122.2		
The greatest movement of the wind in one day	218.0	2nd	
The greatest movement of the wind in one hour	14.0	2nd 11 to noon 11th 10 to 11 A.M. 17th 2 to 3 P.M.	

The number of hours with winds from each of the 8 points—

N. 1, NE. 12, E. 63, SE. 161, S. 260, SW. 175, W. 48, NW. 4, Calm 20.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.6° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

**Results of the Meteorological Observations taken at the Alipore Observatory from
28th August to 3rd September 1887.**

The mean temperature of the seven days	82.2
The average temperature of the corresponding period for 24 years, S. G.'s Office	83.8
The extreme variation of temperature	12.0
The maximum temperature	88.3
The highest velocity of the wind in one hour	12
	lbs.
The highest pressure of wind on one square foot	Not measureable.
	%
The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	85
The total fall of rain from 28th August to 3rd September 1887	Inches.
The average fall of the corresponding period for 24 years, S. G.'s Office	0.90
The total fall from 1st January to 3rd September 1887	2.06
The average fall of the corresponding period for 24 years, S. G.'s Office	46.10
	49.19

The mean pressure, temperature, &c., are deduced from the traces of the barograph and thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, Δ dew.

The total fall of rain from 28th August to 3rd September 1887

1.06

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;

The 5th September 1887.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE birth and death returns of the principal Municipalities in Bengal for the week ending 20th August 1887 disclose the following results:—

1. That births were registered at the rate of 18·9 per 1,000 of population, and deaths at 29·1 per 1,000. The ratios of the preceding week ending 13th August being 16·7 and 28·6 per 1,000, respectively, a fair advance in birth registration is indicated.

2. That the following Municipalities furnished the highest proportions of births and deaths:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Arrah	...	43·1	Arrah	...	149·5
Bhagulpore	...	31·7	Gya	...	62·8
Beauleah	...	31·5	Beauleah	...	42·0
Serampore	...	29·4	Serampore	...	39·2
Durbhanga	...	29·1	Bhagulpore	...	32·6
Gya	...	28·7	Monghyr	...	32·5
			Burdwan	...	32·0
			Puri	...	31·6
			Suburbs of Calcutta	...	30·2

3. That the mortality from the specific death-causes stood as follows in contrast with similar information for the preceding week:—

			Ratio per mille during the weeks ending—	
			20th August 1887.	13th August 1887.
Cholera	5·5	5·4
Small-pox	·2	...
Fever	11·8	10·4
Bowel-complaints	3·6	5·5
Injury	·5	·3
Other causes	7·5	7·0

The comparison indicates, chiefly, much increase in the death-rate from fever, and a sensible diminution in that from bowel-complaints.

4. That in local incidence of the diseases above named, while no Municipality presented noticeably high mortality from small-pox and injury, Puri suffered pre-eminently from bowel-complaints, which carried off 14·7 per 1,000 of its population, and the following Municipalities from cholera, fever and "other causes," which exhibited the death-rates noted opposite them:—

Cholera.			Fever.			Other Causes.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Arrah	...	83·7	Beauleah	...	34·1	Arrah	...	25·1
Burdwan	...	12·2	Arrah	...	32·3	Gya	...	21·8
Gya	...	10·2				Serampore	...	13·7
Serampore	...	7·8				Bhagulpore	...	11·8
Patna	...	6·5						

It will be seen from the above figures that cholera prevailed with marked fatality in the Arrah town.

5. That the death-rates in relation to Sex, Class and Age, stood as follows:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	27·7	Christians	...	13·0	Under 1 year	...	210·9
Females	...	30·6	Hindus	...	31·5	1 and under 5 years	...	50·7
Ratio of male deaths to every 100 female deaths	103		Mahomedans	...	24·0	5 " " 10 "	...	17·9
						10 " " 15 "	...	16·8
						15 " " 20 "	...	23·5
						20 " " 30 "	...	15·9
						30 " " 40 "	...	19·1
						40 " " 50 "	...	22·4
						50 " " 60 "	...	25·7
						60 years and upwards	...	66·5

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 5th September 1887.

Sanitary Commissioner for Bengal.

* A special census of the Europeans in the Danjiling Municipality was recently taken, as the census of this section of the community, taken in February 1927, was not reliable owing to the Europeans being at a minimum in that month. The number of the males in the above table consequently been calculated on the revised population under all heads in the above table except "Age", the ratio under which have been omitted from the authorized form of age classification.

INCREASE.

Tons.

Coal ... 290
This increase is due partly to steamer service and partly to the silk factories being worked by steam-power to greater extent.

Railway plant and rolling-stock ... 57

This increase is due to greater railway materials carried during this month.

Oil-seeds—

(6).—Others ... 13

The increase in this head is due to greater demand in the local market.

Sugar—

(1).—Drained ... 15

The increase in this commodity is due to demands of the locality.

All other articles of merchandise ... 96

There was increase in this commodity in both upwards and downwards, and this may be ascribed to local and foreign demands.

DECREASE.

Grain—

(2).—Rice ... 183

The decrease in this staple is due to low rate of the market.

(5).—Others ... 28

The decrease in this staple is due to low rate of the market.

Salt ... 20

This decrease is due to less demand in the intermediate stations.

Oil-seeds—

Mustard and rape ... 35

This decrease is due to low prices at Azimgunge this year.

Sugar—

(2).—Undrained ... 15

The decrease in this staple is due to less demand.

NALHATI, the 3rd September 1887.

R. G. MOOKERJEE, Manager.

Weekly Return of Traffic Receipts on Indian Railways.

RESOLUTION ON THE REPORT ON THE LEGAL AFFAIRS OF THE GOVERNMENT OF BENGAL FOR THE YEAR 1886-87.

RESOLUTION.

JUDICIAL.

Calcutta, the 5th September 1887.

READ—

The Report on the Legal Affairs of the Government of Bengal for the year 1886-87.

Read also—

The Reports for the two preceding years, and the orders of Government thereon.

The following statement shows the result of Government litigation in all the Civil Courts of Bengal during the year 1886-87 as compared with the two previous years:—

	1884-85.	1885-86.	1886-87.
Decided in favour of Government ...	448	576	742
Decided against Government ...	148	92	167
Compromised, remanded or withdrawn ...	102	340	142
Percentage in favour of Government ...	75	86½	81½

The increase is due to a large number of land acquisition cases in connection with the Kidderpore Wet-dock.

2. The result of Government litigation in the High Court only was as follows:—

	1884-85.	1885-86.	1886-87.
Decided in favour of Government ...	24	28	30
Decided against Government ...	1	4	77
Compromised, remanded or withdrawn ...	4	305	2
Percentage in favour of Government ...	96	87½	28

The Legal Remembrancer points out that the low percentage of cases decided in favour of Government is due to the fact that 66 enhancement of rent-suits from Malinaggar, in the district of Mozufferpore, were decided by the High Court against the Government in two special appellate decisions, each governing a number of cases. Even if the 66 cases be treated as two cases, the percentage of decisions in favour of Government would still be far from good. The Lieutenant-Governor is satisfied that in many of the cases noticed in the Report, the Government had no reasonable grounds to go upon, and such cases should not have been taken into or defended in Court. The Legal Remembrancer will be asked to report specially on this point, and to state whether he can suggest any means whereby a more careful examination of the probabilities of success may be made in the first instance, and a stricter watch kept over the progress of cases afterwards. The attention of the Revenue Department will also be called to this matter.

3. Sir Stuart Bayley does not deem it necessary to discuss the details of the various cases which have been decided against Government. With reference to the case under Act XI of 1859 mentioned by Mr. Allen in paragraph 12 of his Report, the suggestion made by him will be considered in the Revenue Department. On the data now before him, the Lieutenant-Governor is certainly of opinion that the Commissioner or the Board of Revenue would have done well to cancel the sale.

4. Perhaps the most important case during the year was the Dears Survey case, in the district of Furreedpore, in which a quantity of land was resumed as new accretions, and assessed under the provisions of Act IX of 1847. The plaintiffs instituted a suit against Government claiming the land as a re-formation on the site of their permanently-settled mouzah. The Government urged that the lands being liable to assessment under Act IX of 1847, the Civil Court had no jurisdiction to entertain the suit. This contention was disallowed by the Court of first instance, but allowed by the District Judge on appeal. On a second appeal to the High Court, the question of jurisdiction was referred to a Full Bench and decided against the Government. The Legal Remembrancer has made the following remarks regarding this case: "The question whether the land is liable to assessment, or already covered by an existing settlement, appears to have been always reserved for the decision of the Revenue authorities, and section 6 of Act IX of 1847 declares the Board's decision final in such a case. This judgment of the Full Bench, ignoring this principle, and overruling previous decisions of the High Court itself, has been appealed to Her Majesty in Council."

5. The result of Government litigation in the lower appellate Courts was as follows:—

		1884-85.	1885-86.	1886-87.
Decided in favour of Government	...	111	29	25
Decided against Government	...	8	17	7
Compromised, remanded, or withdrawn	...	8	...	17
Percentage in favour of Government	...	93	63	78

As regards the seven suits decided against Government, Sir Stuart Bayley would only remark that the suits mentioned in paragraphs 20 and 21, which were brought for the cancellation of certificates issued under Act VII (B.C.) of 1880, show the necessity for the exercise of caution and supervision in the application of the certificate procedure.

6. The following was the result of Government litigation in the Courts of first instance:—

		1884-85.	1885-86.	1886-87.
Decided in favour of Government	...	313	519	687
Decided against Government	...	139	71	83
Compromised, or withdrawn	...	90	35	123
Percentage in favour of Government	...	69	88	89

The increase in the number of cases is due to there having been an unusually large number of land acquisition cases in the districts of the 24-Pergunnahs, Patna, and Dacca. Of the 83 cases decided against

Government, 21 were cases under the Land Acquisition Act, in which the Judge awarded larger amounts of compensation than had been offered by the Collector. Of the remaining cases, 35 were brought by the tenants of Bokalia, in the district of Chittagong, for a reduction in the rent assessed on them under Act VIII (B.O.) of 1879. In these cases appeals have been instituted in the District Judge's Court against the decisions of the Munsif. The result of the appeal filed in the case arising out of an alleged encroachment on a public road mentioned in paragraph 31 of the Report, should be specially reported. The suit, brought by the Maharajah of Durbhunga against the Chairman of the Durbhunga Municipality, for the recovery of a piece of land which had been acquired by Government, is one of great importance, as affecting the powers of a Manager under the Court of Wards. The Legal Remembrancer should see that the case on behalf of Government is properly and thoroughly placed before the High Court on appeal. This remark also applies to the case mentioned in paragraph 38, as the question as to the existence of any transferable right is one of great importance. As remarked by the Collector, the judgment, if not upset on appeal, will certainly form a most inconvenient precedent.

7. The figures below show the result of the litigation in which the Court of Wards were concerned for the year under report as compared with the two preceding years:—

	1884-85.	1885-86.	1886-87.
Decided in favour of Court of Wards ...	700	1,113	1,034
Decided against Court of Wards ...	121	158	310
Compromised, remanded or withdrawn ...	56	44	91
Percentage in favour of Court of Wards	85½	87½	77

The low percentage is said to be due to the fact that 210 cases instituted by the Manager of the Dighapatia Estate for recovery of arrears of rent were decided against the Court of Wards during the year. Appeals have been preferred in these cases.

8. The following table shows the amount of Government decrees recovered during 1886-87, as compared with the amounts recovered during the two previous years:—

	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.
Amount under realization .	6,42,647	6,26,182	50,449
Realized during the year .	20,407	12,338	13,367
Percentage of recovery .	3½	2	26½

Omitting the Canning decrees which were remitted in the previous year, the amount under realization in 1885-86 was only Rs. 44,903, or less than in the present year. The percentage of recovery on that amount was Rs. 27½, so that the percentage has dropped by 1 per cent. during the year under report.

9. The amount of Wards' decrees recovered during 1886-87, as compared with the realizations of the two preceding years, was as follows:—

	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.
Amount under realization ...	5,72,757	9,37,524	11,07,570
Realized during the year ...	1,02,253	1,69,179	1,63,506
Percentage of recovery ...	19½	18	14½

The Lieutenant-Governor is of opinion that the percentage of recovery, both on Government decrees and Wards' decrees, is exceedingly bad. The most unsatisfactory feature of Government litigation in Bengal is that Government must of course make good to the uttermost farthing all adverse decrees, while it experiences the greatest difficulty in realizing the decrees in its favour, some of them being wholly infructuous. The Board of Revenue are of opinion that what is necessary to improve realization is greater energy on the part of the officers in the Execution Department. This remark of course applies only

to Wards' decrees. As regards Government decrees, Sir Steuart Bayley agrees with the opinion of his predecessor that small collections are due in a great measure to the facility for concealing property, to the joint family system, and to the prevalence of *benamée* transactions, which offer almost insuperable obstacles to the realization of decrees, even by private persons. Sir Steuart Bayley has no doubt that the offences of fraudulent concealment, removal, or transfer of property are of frequent occurrence in Bengal. Collectors, however, have some remedy in their own hands, as they might apply to the Magistrate in any fitting case to issue process under section 424 of the Penal Code, an offence, for the prosecution of which no sanction is required. The Lieutenant-Governor is not aware whether a commission upon realizations is now paid to Nazirs and their subordinates. If not, he thinks that the experiment might be tried. The Legal Remembrancer will be asked to report on this point. Statement E appended to the Report shows that the amount expended in litigation by Government during the year was Rs. 48,368, while the receipts amounted to only Rs. 13,367.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs for information and submission of the report called for in paragraphs 2, 6 and 9.

Ordered also that a copy of this Resolution, with a copy of the Report, be forwarded to the Revenue Department of this Office with special reference to the remarks contained in paragraph 2.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Chief Secretary to the Govt. of Bengal.

DONATION BY MAHARANI SARNAMAYEE FOR THE PROMOTION OF TECHNICAL EDUCATION.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 9th September 1887.

RESOLUTION.

READ—

- An endorsement from the Commissioner of the Presidency Division, No. 69MG, dated the 7th March 1887, forwarding a copy of a letter No. 46, dated the 14th February 1887, from Maharani Sarnamayee of Cossimbazar, Member of the Imperial Order of the Crown of India.
- An endorsement from the Commissioner of the Presidency Division, No. 39JNG, dated the 2nd August 1887, forwarding a copy of a further communication No. 197, dated the 1st July 1887, from Maharani Sarnamayee.
- A letter from the Director of Public Instruction No. 5616, dated the 18th August 1887.

In commemoration of the Jubilee year of the reign of Her Majesty the Queen-Empress of India, the Maharani Sarnamayee of Cossimbazar, Member of the Imperial Order of the Crown of India, has offered to make an endowment of Rs. 20,000 for the promotion of technical education in the Moorshedabad district, and with this view has proposed the following scheme. Of the sum of Rs. 20,000, Rs. 5,000 will be appropriated for the purpose of obtaining the necessary apparatus and instruments, and the income accruing from the

investment of the remainder will be expended, in concert with the Municipal Commissioners of Berhampore, on (1) the endowment of a class at the Berhampore Collegiate School to which the present technical school under the charge of the Municipal Commissioners will, together with its apparatus and materials, be transferred; and (2) the establishment of classes in connection with this technical class at some of the elementary schools maintained by, and situated within, the municipality.

The Lieutenant-Governor has pleasure in accepting Maharani Sarnamayee's munificent gift, and desires to communicate to her his approval of the scheme which she proposes, and to tender his thanks for her great liberality.

ORDER.—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Commissioner of the Presidency Division for information and communication to the Maharani Sarnamayee of Cossimbazar, Member of the Imperial Order of the Crown of India.

Ordered also that a copy be sent to the Director of Public Instruction for information.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE RAJSHAHYE DIVISION FOR 1886-87.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 13th September 1887.

RESOLUTION.

READ—

The Annual Administration Report of the Rajshahye Division for 1886-87.

The Rajshahye Division was in the charge of Lord H. Ulick Browne until the 1st October 1886, when, on his retirement from the Bengal Civil Service after nearly 10 years successful administration of the Division, he was succeeded by Mr. Lewis. The Report is submitted by Mr. Lewis, who held charge of the Division for the remainder of the year under review.

2. *Tours*.—Mr. Lewis was on tour in the Division for 138 days, and did a large amount of inspection work, including inspection of all the district offices and six of the sub-divisional offices. All the district and sub-divisional officers spent the prescribed period in touring, and appear to have made good use of their time in camp; the longest tours were made by Messrs. Oldham and Paul in Darjeeling (119 days), Mr. Sunder in Alipore (159 days), and Mr. O'Donnell in Kurseong (147 days). The time spent in the interior by Joint and Assistant Magistrates, other than those in charge of sub-divisions, was insufficient, and the attention of the Commissioner is called to the Resolution on the Report for 1883-84, in which it was urged that an effort should be made to arrange for the Joint-Magistrates to spend at least a month in camp.

3. *Weather and crops*.—The rainfall of the year was copious and well distributed, and the outturn of the crops was generally good, that of the aman dhan, which is the chief food crop of the division, being an unusually full crop. Indigo, which is now grown only to a limited extent in three districts of the division, was damaged by the heavy rains of July and August, and jute and tobacco, which were not such good crops as in the preceding year, suffered, the former from the excessive rainfall and the latter from hail. The year was favourable to the cultivation of ganja, and the outturn of this crop was very satisfactory.

The following estimate of the outturn of the different crops, in which the average harvest is taken at 16 annas, is taken from the Commissioner's report:—

NAME OF CROP.	DINAG- PORE.		RAJ- SHAHYE.		PUBNA.		BOGHA.		RUNG- PORE.		JULPI- GORREE.		DAR- JEELING.		DIVI- SIONAL.		REMARKS.
	Average outturn in annas.		Average outturn in annas.		Average outturn in annas.		Average outturn in annas.		Average outturn in annas.		Average outturn in annas.		Average outturn in annas.

13. Millets	16	16	12	14	14	14	15	

4. *Public Health and Vaccination.*—The mortality statistics of the year show an increase in the number of deaths in all the districts of the division except Rajshahye and Bogra. This increase is to some extent attributed to improved registration, but the year appears to have been generally unhealthy in this division and especially so in Dinagepore, where the public health is reported to have been extremely bad and the season is compared with the memorably unhealthy year, 1877. Cholera was epidemic in Pubna in the hot weather and in Julpigoree after the rains, and was also prevalent in the Darjeeling Terai and in Rungpore. In the last named district the prevalence of fever and cholera resulted in the highest annual figures of mortality ever recorded for the district, viz, 32·22 per mille. The highest death-rate, viz, 35·27, was recorded in Julpigoree.

Vaccination operations generally appear to have been very much on the same scale as last year, except in Rungpore and Julpigoree. In Rungpore there was an increase of 6,000 vaccinations, which is balanced by a falling off of about the same number in Julpigoree; the decrease in the latter case was due to the insufficiency of vaccinators. In Pubna it is said that vaccination is still regarded with distrust in backward villages; but on the whole and especially in the Darjeeling hills it seems that the system is gaining popularity.

5. *Material Condition of the people, &c.*—The Commissioner considers that the material condition of the people of the Rajshahye Division is at present good, owing to the favourable harvests of recent years, and the District Officers give satisfactory accounts of the general prosperity in ordinary years, and of the increased comfort of the cultivators and labouring classes in the present times of plenty. The Officiating Collector of Dinagepore, whose estimate is the lowest with regard to the material condition of the people, places the mass of the cultivating classes in his district half way in the scale of comfort between the same classes in Eastern Bengal and Behar, and remarks that, while there appears to him to be a great difference between the standard of comfort maintained by the ryots of Dinagepore and that of the Mymensingh ryots, there is, on the other hand, an absence of any appearance of actual squalor and want such as may be met with in the interior of a Behar district. The Commissioner, however, who has served in Dinagepore, takes a more cheerful view of the condition of the district, and writes as follows:—

“Rents in Dinagepore are low, land is still plentiful, though much waste and jungle has been reclaimed of late years, and the cultivator has a ready market for his produce.

These are not conditions that tell against the welfare of the agricultural community, and the fact that the villagers can afford to import labour to carry on agricultural operations proves that their condition is good. I have always considered Dinagore as pre-eminently a district where the ryots hold their own acres not liable to rack-renting, where, though the zemindars are poor, there are a large number of substantial ryots, mundols, jotedars, and others, through whose influence a system of village government prevailed; where generally the peasantry live in ease and content. It is true that some years have elapsed since I was Magistrate of Dinagore; but I cannot think that the mere fact of the district having been since then opened out to trade can have had any evil effect on the condition of the people at large."

A proof of the general agricultural prosperity is found in the fact that while there is no emigration from the division, immigrant labourers come every year into all its seven districts to take part in the harvesting and field work, and in road-making and tank-digging. In the year under review, the Assam-Bihar Railway works also attracted large numbers of up-country labourers to Dinagore. A falling off in the number of immigrant labourers who came to work in the Julpigoree tea-gardens is ascribed to the fact that unfair and illegal means were largely used by Assam recruiters both in the Chota Nagpore recruiting grounds and *en route* to divert the labourers to Assam. These accusations ought to have been enquired into at the time. If Assam recruiters offer higher terms than the Julpigoree recruiters and by fair means are able to persuade labourers to go to Assam in preference to the Julpigoree gardens no grievance is established; but, it is the duty of the local officers to ensure that no fraud or compulsion is used to intending emigrants.

No general change occurred in the wages of agricultural labour except in the Rajshahye district where a rise is attributed to the good crops. The price of food fell everywhere as compared with the average prices of the last five years, common rice ranging in the plains districts from 20½ seers a rupee in Rungpore to 24½ seers in Dinagore. The price of food has fallen. Compared with the average quantity sold per rupee during the five preceding years, the average quantity of common rice and wheat increased in all districts, and of pulses everywhere, except in Rajshahye, and there further appears to have been an improvement in 1886-87 over the year 1885-86.

6. *Manufactures and Trade.*—Jute, tea, silk, molasses, and tobacco are the most important manufactures of the division. The outturn of tea in Darjeeling increased from 9,090,298lbs. in 1885 to 9,416,631lbs. in 1886, and in Julpigoree tea cultivation continued to expand, and there was an advance of little short of two million pounds in the outturn (5,571,404 lbs.) as compared with that of the preceding year. The continued decline in the silk industry of the Lower Provinces has occupied the attention of Government, and steps have been taken under the supervision of the Agricultural Department with a view to investigate and combat disease among silk-worms.

The Commissioner gives a very interesting review of the trade of the division registered in the calendar year 1886. His figures represent the trade carried by the Northern Bengal State Railway, the Darjeeling-Himalayan Railway, the Eastern Bengal State Railway, and the Serajgunge steamer service, the total value of which is estimated approximately at 10 crores of rupees. The figures show a net excess of exports over imports to the value of about one-and-a-half crores of rupees. It is to be observed that the exports to Calcutta, Assam, and Eastern Bengal were more than double those of 1885. The expansion of the Serajgunge steamer trade is especially noticeable. External trade is carried on with Bhutan, Sikkim, Nepaul, and Thibet. There was a very considerable increase in the trade with Sikkim, Nepaul, and Thibet during the earlier months of 1886, but towards the end of the year a strict blockade was maintained, and trade in consequence was brought to a standstill. Trade with Bhutan also fell off. On the general trade aspects of the division the Commissioner writes:—

"The opening out of lines of railway and their attendant feeder roads have given a great impetus to the extension of trade and commerce in the division, and this has reacted favourably in improving the condition of the people. The cultivators have a readier market for their produce and can obtain better prices, and as a consequence cultivation has extended. It is not so long ago since Rajshahye, Dinagore, Rungpore, and Bogra were covered with jungle famous for the shikar to be had in them, immense tracts of which have now been cleared for cultivation. During even the nine years that have intervened since I was personally acquainted with some of the above districts, a great change has taken place, and the effect of the impetus given to trade on the material condition and well-being of the people is very marked."

7. *State of public feeling.*—The District Officers state that public feeling on general subjects is as yet almost unknown, but they are unanimous

in their reports regarding the unprecedented enthusiasm and loyalty evinced, by all classes on the occasion of the celebration of the Queen-Empress's Jubilee. The imposition of the income-tax does not appear to have been followed by any pronounced feeling of discontent, and it is said to be considered more equitable than its predecessor, the license-tax, the incidence of which was on one section of the community only. The provisions of the Tenancy Act are gradually becoming better understood, and the excitement attendant on its introduction has, according to the Collectors of Rungpore and Rajshahye, subsided. Local Self-Government in Pubna is said to have been greatly appreciated as a mark of confidence in the people.

8. *Employment of Muhammadans.*—A comparison between the tabulated statement prepared by the Commissioner under this head and that submitted last year shows no change in the number of Muhammadan gazetted officers, but a very large increase in the numbers of Muhammadan officers employed by Government in superior and inferior service; as, however, last year's returns were admittedly incorrect, and did not include certain departments taken into account this year, it is impossible to draw conclusions on the subject at present. The statement for 1886 is reproduced below :—

DISTRICTS.	Proportion of Muham- madans to district population.	Proportion of educated Muham- madans in the district as compared with edu- cated Hindus.	NUMBER OF PERSONS IN GOVERNMENT SERVICE.						REMARKS.
			Gazetted.		Superior service.		Inferior service.		
			Total officers.	Muham- madan officers.	Total officers.	Muham- madan officers.	Total officers.	Muham- madan officers.	
Dinagapore	1 to 1.0	1 to .8	19		211	34	645	256	Excluding officers and men serving under the Muni- cipality and the District Road Cess Committee.
Rajshahye	1 to 1.2	1 to .9	42		373	92	834	413	
Pubna	1 to 1.3	1 to 1.8	19		317	87	639	389	
Bogra	1 to 1.2	1 to .6	10		305	173	333	233	
Rungpore	1 to 1.6	1 to 1.18	30		605	206	412	268	
Julpigoree	1 to 2.7	1 to 1.9	15		213	38	613	178	
Darjeeling	1 to 18.7	1 to 10.5	22		140	24	431	68	
Total	1 to 1.5	1 to 1.1	107	13	2,344	654	3,977	1,927	

9. *Police and Crime.*—There was a slight decrease in cognizable crime in the division, the number of cognizable offences reported falling from 13,225 to 12,891, but this decrease occurred in Dinagapore and Rajshahye only, the returns of the other districts showing a small increase. Non-cognizable cases rose from 8,503 to 9,346, the increase having been common to all the districts of the division except Dinagapore. A considerable amount of work continues to be disposed of by the Magisterial Benches. With regard to the conduct of the regular police, the Lieutenant-Governor observes that the figures showing the percentage of police officers and men punished judicially and departmentally exhibit very far from satisfactory results as regards every district except Dinagapore, and there the conduct of the force is expressly reported by the Magistrate to have been most unsatisfactory.

10. *Civil Justice.*—From the statement of civil suits, it appears that the total number of suits instituted in 1886 was 45,199 as against 44,407 in 1885. Rent suits increased in number in Rajshahye and Pubna, but fewer were instituted in all the other districts of the division; suits for title and for money and moveable property increased generally. The explanation of the fluctuations appears to be that in a season of plenty tenants have been in a better position to pay their rents; while, on the other hand, creditors have for the same reason been eager to seize the opportunity to sue their debtors. It is also possible that, owing to doubts being entertained as to the effects of certain provisions of the Tenancy Act, suits are being withheld pending the decision of test cases.

11. *Land Revenue and Settlements.*—The total land revenue demand of the division for the year was Rs. 51,21,620 from 5,447 estates, and the collections reached the percentage of 96.48 against 96.04 in 1885-86. The remissions granted amounted to Rs. 18,311 only as against Rs. 32,600 during the preceding year, and the balance outstanding at the close of the year was also smaller than that with which it opened. Under the head of settlements the grant of leases of waste land in Julpigoree, amounting to 22,394 acres, and the Mircha Deara Settlement in Rajshahye, were the most important operations. In Pubna, Bogra, and Rungpore a re-valuation under the Cess Act of 292 estates was completed with the result of a net increase of Rs. 48,779 in valuation and Rs. 918 in both the cesses.

12. *Relations between Landlord and Tenant.*—The relations existing between landlords and tenants in the Rajshahye Division appear to be on the whole satisfactory, but in Pubna they are reported to be in many instances strained. The circular orders issued by the Board of Revenue are said to have to a great extent settled the disputes, which were at first frequent, regarding the filling up of the printed form of rent receipt. The work done under the Tenancy Act during the year in the Collectors' offices relates principally to the issue of notices under the different sections and the payment of landlords' fees on the transfer of tenures. The Commissioner expresses only the general opinion that "the Act has worked on the whole satisfactorily," and adds that all the District Officers have not reported fully on the matter. The Lieutenant-Governor hopes that a fuller notice of the working of the Act will be given in next year's report. It is noticed that landlords in many cases do not appreciate the provisions of section 12 of the Act, which were inserted especially for their benefit, and refuse to accept fees sent to them with notices of transfer under the impression that acceptance will bind them to acknowledge such transfer.

13. *Excise and Stamps.*—The Excise revenue rose from Rs. 6,02,106 to Rs. 6,51,713, in the year under review, the increase being shared in by all the districts. This general improvement was obviously due to the prosperous condition of the people caused by good harvests, and the consequent advantageous settlement of shops. In the stamp revenue there was an increase in three districts, and a decrease in four, resulting in a net increase of Rs. 30,508 for the division.

14. *Monetary arrangements.*—The value of notes received from, and issued to, the public in payment of Government dues increased in five of the seven districts, the divisional result being a decrease in the receipt, and an increase on the issue side. Stock-notes continue to be unpopular, only one sale and one renewal being reported for the whole division. There was a large increase in the amount of money deposited in Savings Banks, no doubt due to the great convenience to the people of post offices as banks for deposits. As regards money-orders, there has been a steady increase in transactions since their transfer to the Postal Department.

15. *Education.*—Three thousand four hundred and thirty-eight schools and 87,556 pupils were under the cognizance of the Education Department in this Division at the end of the year. There was a rather large decrease under lower primary schools and pupils on account of further exclusion from the system of rewards, and therefore from the returns of very small and inefficient schools; the decrease is especially marked in Bogra, Pubna, and Rajshahye. The Lieutenant-Governor has again to notice with regret the decrease in the number of girls' schools and of pupils attending them, attributed to the stricter working of the reward system. In Rajshahye, in spite of the fact that for the first time some girls were successful in the Lower Primary Scholarship examination, there was a discouraging decrease from 27 schools and 482 pupils to 20 schools and 330 pupils, and in Pubna the decrease was still greater. The attention of the Director of Public Instruction will be called to this portion of the Commissioner's report.

16. *Communications, Road Cess Committees.*—Rupees 3,63,000 were spent during the year by the District Road Cess Committees in original works and repairs. The Commissioner especially insists on the necessity of improving communications in the Dooars in order to encourage the taking up of waste lands.

The members of the Road Cess Committees in Rajshahye and Rungpore are said to have taken much interest in their work. Before the close of the year District Boards had been constituted in Rajshahye and Pubna.

17. The Commissioner's remarks on the conduct of officers will be noted in the Appointment Department.

18. The Lieutenant-Governor observes that this report is 73 pages long without appendices, against reports of 63 pages and 46 pages for the years 1885-86 and 1884-85. The Commissioner has too often quoted at length the opinions of his District Officers, instead of summarising the results of the year for the Division as a whole. Sir Stuart Bayley requests therefore that the Commissioner's future reports may be more concise.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offy. Secretary to the Government of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE DACCA DIVISION FOR 1886-87.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 18th September 1887.

RESOLUTION.

READ—

The General Administration Report of the Dacca Division for 1886-87.

MR. W. R. LARMINIE was Commissioner of this division throughout the year under review. The report is submitted by Mr. C. F. Worsley, who subsequently officiated as Commissioner.

2. *Annual Tours.*—The Commissioner set a good example to the officers of the division in spending 128 days on tour, visiting the head-quarters of each district twice or oftener, and all of the sub-divisions, except Jamalpore, once. The Collectors' tours were all of sufficient length, except in Dacca. Mr. Fasson was especially energetic in visiting all parts of the Backergunge district. In explanation of the deficiency of 11 days in the case of the Dacca district, it is said that the use of a steamer during the rainy season rendered it possible for the Collector to see more of the interior in less time than usual; but this is not a sufficient reason for curtailing the prescribed number of days. The Sub-divisional Officers, with one exception, spent 120 days or more in camp. The exception is in the case of Baboo Mahendra Chundra Mozumdar, Sub-divisional Officer of Kishoregunge, whose tour was in the preceding year also short by 35 days, and whose repeated shortcomings in this respect call for an expression of the Lieutenant-Governor's displeasure. It is impossible for a Sub-divisional Officer to be efficient in his work unless he moves about actively in his sub-division, and it is noticed that this officer's executive work has fallen under the censure of the Commissioner.

3. *Weather and Crops.*—The rainfall of the year was in excess of the average of the last four years, except in Backergunge, where the total for the year was deficient, although in the same district damage was done by excessive rain in the transplanting season. The rainy season was marked by very high floods, especially in Dacca, but notwithstanding these the agricultural results are said to have been generally good. The tables appended to the Report show, however, that the *amun* rice, which is the most important crop in the division, was a full crop only in the Furreedpore district, and below the average in the other three districts. *Aus* rice and jute also suffered from excessive flooding; but judging from the trade returns, the latter crop was abundant. The yield of winter crops, *i.e.*, mustard, linseed and pulses, is said to have been good, but this is not generally borne out by the figures of outturn.

4. *Material condition of the people and prices of food and labour.*—No change in the material condition of the people is reported, the agricultural classes continuing to be well-to-do and prosperous, and the literate classes, including office-seekers, to struggle with straitened circumstances and limited prospects. The deterioration in the condition of landed proprietors, remarked by the Collector of Dacca, is, it is to be feared, the consequence of constant litigation and improvidence, and not of a depreciation in the value of landed property. That the year was a favourable one is shown by increased trade and by better collections of revenue under all heads. The price of common rice fell in every district, and wages of labour continued to maintain a high rate.

5. *Public health.*—The total number of deaths registered was 188,994 against 164,359 in 1885-86. The increase may to some extent be due to improved registration; but it is believed that the year was unhealthy except in Furreedpore. Cholera of a virulent type was generally prevalent but fever and small-pox were less fatal in every district except Backergunge. The practice of steeping jute indiscriminately in stagnant khals and bheels is noted as decidedly injurious to health, and steps should be taken to prevent the pollution of drinking-water by instituting prosecutions for nuisance.

6. *Trade and Commerce.*—The main lines of traffic with Calcutta and western districts continue unchanged. Trade is most brisk in the rainy season when

boat communication is easy and cheap, but is greatly impeded at other times by the want of roads. In Dacca the jute and rice trade increased, and both the import and export trade flourished in Mymensingh; but the low price of rice, which diminished the purchasing power of the cultivators, had a depreciating effect on trade in Backergunge. The value of the trade of the Naraingunge port rose from 65½ lakhs of rupees in 1885-86 to 88½ lakhs in 1886-87. Far the most important trade staple of this division is jute, the export of which from Naraingunge were valued at 80½ lakhs of rupees, or 91 per cents. of the trade of the port.

7. *Public feeling and Administrative arrangements.*—The Lieutenant-Governor has again, in the case of this Division, to notice the universal and spontaneous display of feeling called forth on the occasion of Her Majesty's Jubilee. Much interest is reported to have been taken by the educated classes in the enquiries of the Public Service Commission, and some enthusiasm was displayed in the districts of Dacca and Furreedpore on the occasion of elections to the Local Boards under the Local Self-Government Act. The working of the Tenancy Act is noticed later in this review.

The following table shows the extent to which Muhammadans are employed in Government service in this Division—

DISTRICT.	A			B			C			Grand Total.	REMARKS.
	Gazetted Officers.			Officers in superior service.			Officers in inferior service, including mental servants.				
	Muhammedans.	Hindus.	Total.	Muhammedans.	Hindus.	Total.	Muhammedans.	Hindus.	Total.

Backergunge	8	44	52	176	877	1,053	287	272	559	1,005	
Mymensingh	0	37	37	171	787	958	453	561	1,017	2,021	
Total	33	164	197	553	2,833	3,386	2,250	2,506	4,756	8,345	

* Do not include Rural Sub-Registrars and Registrars of Muhammadan marriages. The figures of other districts include them.

Sixty-four per cent. of the total male population are Muhammadans; but for every Muhammedan able to read and write three Hindus were returned at the last census. It will be seen therefore that in superior service the Muhammedans do not hold their own in this division, while in inferior service they do much more than hold their own. Some thing may be done to redress this balance by proper supervision on the part of heads of offices when vacancies are filled; but it lies with the Muhammedans themselves to make good their position by improvement in education.

8. *Police and Crime.*—The conduct of the regular police is, on the whole, favourably reported upon, but the standard of merit does not appear to be high, and the success of the force in bringing offenders to justice is not satisfactory. In every district of this division the town police are said to be overworked and underpaid. The improvement in the payment of chowkidars' wages throughout the division is very satisfactory, and to this is naturally in a large measure attributable the good service reported to have been done by their agency. The returns, as compared with those for 1886, show an increase in both cognizable and non-cognizable crime; but the figures are below the average of recent years. The results of the prosecution of false cases were slightly better than formerly. The extraordinary want of uniformity shown in the extent to which, in the different districts of the division, the power of refusing enquiry is exercised by the police is unsatisfactory, and suggests the conclusion that section 157 of the Criminal Procedure Code is nowhere duly appreciated or judiciously utilised.

9. *Civil Justice.*—The fluctuations in the number of civil suits were slight, and all that need be observed is that the Tenancy Act has not conduced to an increase of litigation.

10. *Land Revenue, &c.*—The current demand of land revenue rose from Rs. 33,67,739 to Rs. 33,83,507, and there was a general improvement in

collections. In spite of a heavy arrear balance, the collections in Backergunge for the first time within the last ten years reached the normal standard of 90 per cent., a result which is most creditable to Mr. Fasson. The balances at the close of the year show a decrease in every district, and the number of certificates filed fell from 14,096 to 13,662. There was an increase in revenue both from Stamps and Excise, and, with regard to the latter, it is satisfactory to note that it was accompanied by a general decrease in the number of shops and licenses. The collections under the present Income-tax Act more than doubled those under the Act of 1872, and showed an increase of 63·1 per cent. over those under the License-tax Act in 1885-86.

11. *Relations between Landlord and Tenant.*—In the Dacca and Furreedpore districts relations between landlord and tenant are reported to have been more satisfactory than in the preceding years; but in Backergunge, and still more in Mymensingh, there appears to be considerable tension. The reports of the District Officers under this head are chiefly taken up with accounts of the introduction of the form of rent receipt prescribed by the Tenancy Act. The difficulties attending the introduction of the form are briefly put by Mr. Glazier, Collector of Mymensingh, as follows:—

“Rent receipts are making their way but slowly. A large number have been used, but their use is by no means universal. In many cases the zemindars do not care to use them, as they do not see their way to incorporate with the rent the illegal cesses they have been accustomed to levy. In other cases the ryots object to them, as they do not agree to the amount of annual rent the zemindar wishes to enter in the receipt.”

On the whole matters appear to be settling down with the more general recognition on the part of the landlords that accurate records will check litigation and with the growing appreciation by the ryots of the benefit of a definite acquittance. The management of the Dakhin Shabazpore estate in Backergunge was taken over by the Court of Wards on the application of the joint-proprietors under the provisions of sections 93 to 95 of the Tenancy Act, and the result of the experiment will be awaited with interest. On the general working of the Tenancy Act in this division, Mr. Larminio made the following remarks in his Land Revenue Report:—

“So far I think there is no reason to be dissatisfied with the working of the new Rent Law. Its provisions are of course being only gradually understood, and it would be very rash as yet to predict that the present calm will continue. I see no reason, however, to anticipate any serious disturbances. From what I have been able to gather, a certain sense of security has grown up amongst the ryots, and landlords generally have become conscious that it is useless to try and either evade or act in opposition to the law.

12. *Monetary arrangements.*—There was a large decrease, which is not fully accounted for, in both the receipts and the issue of currency notes everywhere except in Mymensingh. Money-order transactions and savings bank deposits increased in a very satisfactory manner.

13. *Railways and communications.*—The passenger traffic on the Dacca State Railway was most encouraging, but the high rate of freight seems to have interfered with the success of the goods traffic. It is unfortunate that there is not more successful enterprise in the matter of internal steamer communication in this division. Existing roads were maintained in an efficient state, except in the district of Furreedpore, and more original works were executed than in the preceding year. Considerable damages caused by floods had to be made good in the Dacca district. The schemes for the opening up of khals in the Backergunge district appear to be particularly useful.

14. *Education.*—The returns of the Education Department show a continued loss of lower primary schools and pupils in all the districts of this division, except Dacca, with the result that the aggregate numbers of schools of all kinds and pupils at the end of the year were 9,248 and 213,096 respectively as against 11,248 and 245,735 at the end of the preceding year. The Circle Inspector writes that the schools which have disappeared from departmental cognizance were for the most part of inferior quality; but it is also said that in Furreedpore the prosecution of some gurus for submitting false returns alarmed others and prevented them from furnishing any returns. The loss of schools, including girls' schools, was proportionately largest in Furreedpore, and it is observed that the Deputy Inspector in that district is charged with want of interest in his work. In Dacca only was there improvement in female educa-

tion in the year, and the good result here is perhaps due to greater efficiency. The number of upper primary schools and secondary schools increased, and the results of the Entrance Examination were remarkably good.

15. *Working of Committees and conduct of zemindars.*—District and Municipal Committees appear on the whole to have worked very well in this division, but the Lieutenant-Governor regrets to hear of irregularity on the attendance of Honorary Magistrates in Dacca. An efficient Bench of Honorary Magistrates reflects credit on the Magistrate of the district, and on Sub-divisional Magistrates, and no effort should be spared to obtain the zealous co-operation of non-official gentlemen in the administration of justice.

16. The Commissioner finishes his report with a long list of generous donations, many of which are intended to commemorate the Jubilee of the Queen-Empress, made by the zemindars of this division, who are not second in public spirit and liberality to the zemindars of any other part of these Provinces.

17. The Commissioner's remarks on the character of his subordinates will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offg. Secretary to the Government of Bengal.

CONFERENCE FOR DISCUSSION OF CERTAIN EDUCATIONAL QUESTIONS.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 13th September 1887.

RESOLUTION.

READ the following papers on the subject of the periodical holding of Educational Conferences:—

Paragraph 20 of Bengal Government letter No. 2985T—G, dated 25th September 1884, addressed to the Government of India.

Paragraph 29 of Government of India Resolution No. 10—309, dated 23rd October 1884.

Paragraphs 39 and 339 of the Report on Public Instruction in Bengal for 1883-84, and paragraphs 6 and 20 of the Government Resolution thereon, dated 23rd February 1885.

Letter from the Secretary to the Calcutta Missionary Conference, dated 15th March 1886.

Letter from the Director of Public Instruction, No. 2851, dated 27th April 1886.

Letter from the Director of Public Instruction, No. 5303, dated 15th August 1886.

Letter to the Director of Public Instruction, No. 575, dated 18th August 1886.

Letter from the Director of Public Instruction, No. 7528, dated 2nd December 1886.

Letter to the Director of Public Instruction, No. 693, dated 21st December 1886.

Letter from the Director of Public Instruction, No. 4005, dated 21st June 1887.

In paragraph 29 of the Home Department Resolution No. 10—309, dated the 23rd October 1884, the Government of India approved the recommendation of the Education Commission that conferences (1) of officers of the Education Department, and (2) of such officers with managers of aided and unaided schools should be held from time to time for the discussion of questions affecting education, the Director of Public Instruction being in each case *ex-officio* President of the Conference. In accordance with this recommendation, a conference of Inspectors of Schools in the Lower Provinces was held in 1884, and interprovincial conferences have been held of Inspectors of European schools in the Bengal Presidency. Two educational conferences have also been held at Calcutta in 1886 and 1887 at which teachers and managers of European schools attended for the purpose of discussing the provisions of the Code for European schools. A more general conference was proposed by the Director of Public Instruction in his report for the year 1883-84 for consideration of the rules for grant-in-aid to colleges and native schools, with special reference to the standards and other requirements of female education. This proposal was approved by the Lieutenant-Governor, but arrangements were postponed during Sir Alfred Croft's absence on furlough. In August of last year it was determined that a conference, which should be as representative as possible, should be held in Calcutta in the cold weather of 1886-87, and a report of the proceedings of this Conference, which was duly held, has been submitted to Government.

2. In the deliberations of the Conference, which met altogether sixteen times, commencing from the 14th February 1887 to 30th April, the ladies and gentlemen below named took part:—

1. The Revd. K. S. Macdonald, M.A.; } Representatives of the Calcutta Missionary
2. Mr. W. C. Madge, } Conference.
3. „ Abdur Rahman, Barrister-at-Law, representative of the Muhammadan Literary Society.
4. „ Ameer Ali, Barrister-at-Law, representative of the National Muhammadan Association.
5. Baboo Bijoy Kishen Mukherjee, President of the Uttarpara Hitakari Sabha.
6. „ Surja Kumar Adhikari, B.A., Principal, Metropolitan Institution.
7. „ Umee Chundra Dutt, B.A., Principal, City College.
8. „ Krishna Behari Sen, M.A., Principal, Albert College.
9. Dr. Guru Das Banerjee, Member of the Bethune School Committee.
10. Miss A. M. Hoare, Superintendent of the S. P. G. Zenana Mission.
11. „ Hook, Superintendent of the American Zenana Mission.
12. Mrs. Clifford, of the Church of England Zenana Mission.
13. „ Macdonald, of the Free Church Zenana Mission.
14. „ M. Wheeler, Inspectress of Schools.
15. Rai Radhika Prasanna Mukherjee, Barrister, Inspector of Schools, Presidency Circle.

The Director of Public Instruction was *ex-officio* President of the Conference, and the Inspector of Schools, Presidency Circle, acted as Secretary.

The subjects discussed by the Conference were—(1) The grant-in-aid Rules. (2) The course and standards of female education and the means of encouraging and extending it. (3) The revision of the regulations governing the transfer of pupils from one school to another.

3. *The grant-in-aid Rules.*—The principal changes recommended by the Conference refer to rules 6, 11, 14, 15, 16, 19, 20, 21, and to the rules regarding special and building grants. The reasons for the changes and additions made are thus stated in paragraphs 4 and 5 of the Director of Public Instruction's report No. 4005, dated 21st June 1887.

"Rule 6 has been considerably simplified, and brought into harmony with the requirements of classes needing special encouragement, as recommended by the Education Commission. Provision has also been made for a certain proportion of free scholars in aided schools, in accordance with recommendation 5, chapter VII, and recommendation 22, chapter VIII of the report of the Education Commission.

In Rule 9 (i) the distance of four miles has been substituted for six miles in accordance with the unanimous recommendation of the Circle Inspectors. The shorter distance has been for years past practically accepted by the officers dealing with applications for grants-in-aid.

In Rule 11—Municipal contributions are treated as receipts from public sources, in accordance with the views expressed in the report of the Education Commission, chapter XII, paragraph 668, and its appendix, page xxxvi. Similarly, in the report of the Sub-Committee of the Education Commission appointed in 1882 to revise the annual statistical returns of the Education Department, it is explained (paragraph 11) that "schools, whether aided from provincial, from local, or from municipal funds, are classed together as aided schools," in general table III, now in use throughout India. The effect of the proposed change of rule will be to render schools situated within municipal limits more dependent than before on municipal contributions.

Rule 14—Has been altered with a view to encourage independent effort in the direction of higher education. Paragraph 478 of the report of the Education Commission (page 420), pointed out that, although a proportion of 25 per cent. of the total expenditure was sufficient for Calcutta, it was not large enough for the country districts of Bengal, where no aided college had yet been established by private enterprise; and that it was therefore necessary to raise the proportion to 33 per cent. This recommendation has now been adopted.

Rules 15 and 16.—The difference of advancement between district and district, which has all along been recognised for middle schools, is now extended to high schools, in accordance with the recommendations of the Circle Inspectors. In rule 16, the limit up to which the higher rate of aid to middle schools may be given has been raised from Rs. 30 to Rs. 40, as it is now recognised that middle schools maintained at a cost of from Rs. 30 to Rs. 40 a month are just those that need most encouragement.

Rule 20.—The conference raised strong objections to the rule that "a grant should ordinarily be reduced on renewal." It has been reproduced (in new rule 19) in a less stringent form, and in closer accordance with the principles declared in paragraphs 507-509 of chapter VIII of the Education Commission's Report.

Proposed rule 20 merely confirms the existing practice. The object of the stamped agreement is to fix the responsibility of the managers in a formal way.

Rule 21 (1) (b).—Charges for servants and contingencies are omitted, except in the case of girls' schools. Many schools are apt to raise these charges above what is necessary, in order to claim a larger grant. If not recognised in the grant, the expenditure on this account will be kept at the lowest possible point.

Rule 21 (3).—There is greater simplicity in submitting the accounts for the month for which the grant is claimed, and not for the previous month. This change renders it necessary also to substitute the word "due" for "paid" in the form of certificate annexed to the account.

Rule 21 (7a).—It is the duty of the Department not only to see that competent teachers are appointed, but to protect them against the chance of wrongful dismissal.

Rule 21 (10 and 11).—Are introduced as being an improvement on the existing rules.

Rule 21 (15-18).—These are new provisions to meet cases that arise from time to time. The object is to enable the Department to exercise more complete control over the accounts of schools, and to secure the construction of school buildings in accordance with sanitary principles.

Rules 22-29.—Provide for special grants for buildings and furniture, and have been adopted bodily from the corresponding sections in the Code for European schools. In rule 24 the proportion of the maximum Government contribution has been defined in the case of each class of schools.

Rule 30.—This is a new rule, intended for the assistance of schools that desire only a temporary advance from the public funds in lieu of a grant.

5. It only remains for me to add that the forms have been altered to suit the rules, and that in Form A a statement of the proposed fee-rates is in future to be entered."

The amendments in the rules are approved by the Lieutenant-Governor, with the exception of the change recommended in the second sentence of rule 20 (new rule 19). The proposed change in this rule shown in the margin* would abolish an important principle of the grant-in-aid system—the gradual

* Existing rule.—A grant should ordinarily be reduced on renewal.

Proposed rule.—A grant may be reduced on renewal if this can be done without loss of efficiency.

transfer of Government aid from established to new and struggling institutions. It is only by enforcing this principle that funds can be secured, without imposing additional burdens on the tax-payer, for the development of education in parts of the country still in a backward state among classes who have not as yet taken full advantage of the benefits offered, and in directions which have hitherto been to some extent overlooked. The proviso suggested in the words "if this can be done without loss of efficiency," implies that grants made for a term are to be treated in fact as perpetual, except in the rare case where the withdrawal of the grant would not lead to some diminution in the facilities afforded for instruction. Such a rule would, however, altogether cripple the action of Government in promoting the general cause of education. It implies that Government must for ever renew all grants in full, unless precisely the same efficiency can be obtained with the diminished income as with the greater, and that though there may be no funds available, or though such funds as can be used might produce more good if devoted to some other purpose. The Lieutenant-Governor cannot therefore approve this amendment, but he accepts an amendment of the rule

A grant should ordinarily be reduced on renewal, when this can be done without serious loss of efficiency.

shewn on the margin, which has been proposed by Sir Alfred Croft. The addition of the sentence requiring that notice be given to managers of

schools in all cases of reduction of grants is in accordance with the recommendation made by the Education Commission in paragraph 509 of their report, and is accepted.

The Lieutenant-Governor agrees with the Director of Public Instruction in thinking that it will be necessary to revise, in the sense of the grant-in-aid rules now sanctioned, the rules relating to grant-in-aid, in Part VI (Education) of the rules framed under the Local Self-Government Act, for all schools, the grants to which are sanctioned by District Boards. The Director is requested to submit draft revised rules for the approval of Government.

4. *The course and standards of female education, and the means of encouraging and extending it.*—The improved vernacular standards of examination adopted by the Conference for girls' schools and zenanas are approved by the Lieutenant-Governor. In view, however, of the present urgent necessity for keeping down all expenditure which is not absolutely necessary, the proposal to provide an additional Inspectress of Schools, and to create special scholarships for girls, cannot be sanctioned. The proposal that rewards should be given to female teachers on passing by standards IV, VI or VII to the amount of Rs. 10, Rs. 20, and Rs. 30, respectively, will not involve much cost and may be sanctioned.

5. *The revision of the regulations governing the transfer of pupils from one school or college to another ("inter-school rules") with a view to their application to the educational institutions of Calcutta.*—The "inter-school rules" or "transfer rules" for colleges and high schools, as revised at the Conference, are sanctioned provisionally for one year; they will be again subject to revision in the light of experience at the end of that time. The Lieutenant-Governor accepts the Director's recommendation that the revised rules should be at once applied to Calcutta only, and that Circle Inspectors and other local authorities should be consulted as to the expediency of substituting these rules throughout Bengal for those now in force.

6. Sir Steuart Bayley desires that his thanks may be conveyed to the President and to the ladies and gentlemen who took part in the deliberations of the Conference.

ORDERED—That this Resolution and the revised rules and forms approved in paragraphs 3 and 5 above, and also the statement of vernacular standards of examination for girls' schools and zenanas, be published in the *Calcutta Gazette*, and that copies be sent to the leading newspapers. The Bengali, Hindi, and Uriya Translators will be requested to translate the revised grant-in-aid rules into Bengali, Hindi, and Uriya, and to publish them in the vernacular *Gazettes*; also to furnish the Director of Public Instruction with as many copies of the translations of the rules as may be required for distribution. The Bengali Translator will also be requested to translate into Bengali the vernacular standards of examination for girls' schools and zenanas, and to publish the same in the *Bengali Gazette*; also to furnish the Director of Public Instruction with as many copies of the vernacular translation of the standards as may be required for distribution.

The Superintendent of Government Printing, Bengal, will be asked to supply the Director of Public Instruction with as many English copies (1) of the revised grant-in-aid rules and forms, (2) of the vernacular standards of examinations for girls' schools and zenanas, and (3) of the transfer rules of high schools and colleges as may be required for distribution.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offg. Secretary to the Govt. of Bengal.

RULES FOR GRANTS-IN-AID TO COLLEGES AND SCHOOLS IN BENGAL, 1887.

1. A grant from Provincial revenues is assigned by Government annually for the province, to be expended in grants-in-aid to schools not under Government management provided they fulfil the conditions prescribed in the following rules.

2. The grant is distributed by the Director of Public Instruction, on the recommendation of the Circle Inspector, to schools which are certified to be eligible under these rules, reference being had to the requirements of each locality, as compared with others, and to the funds disposable.

3. Any school to which aid is given, together with all its accounts, books, and other records, shall at all times be open to inspection and examination by any officer appointed by the Government for the purpose; and to this end the records and accounts shall be placed in such custody that they shall be always accessible on the visit of any inspecting officer. Such inspection and examination shall have no reference to religious instruction, but only to secular education.

4. Inspecting officers will interfere as little as possible with the local management of schools, but are employed to see that the instruction is efficient, and that the conditions on which the grants were made are fulfilled; and aid will be withdrawn from any school in which such conditions are not fulfilled.

5. Grants are given on the principle of strict religious neutrality, and no preference will be shown to any school on the ground that any particular religious doctrines are taught or not taught therein.

6. Grants-in-aid will be made to such colleges and schools only (with the exception of training schools, girls' schools, night schools for adults, and schools for aborigines and low castes) as require some fee, however small, from all their scholars. Exemption from this rule may be allowed in exceptional cases by the Director of Public Instruction.

7. The promoters or managers of any institution by whom application for a grant is made must appoint a Secretary to conduct their correspondence with the Department, and they must record the names of the managers.

8. The managers are responsible for the due expenditure of the school funds in accordance with the conditions of the grant.

9. In respect of any school for which application is made, full information must be supplied on the following points, and must be thrown into the shape given in form A appended to these rules—

- (a) The pecuniary resources, permanent and temporary, on which the school will depend for support.
- (b) The proposed monthly expenditure in detail.
- (c) The average number of pupils to be instructed.
- (d) The persons who will form the Committee of Management.
- (e) The class of school and course of instruction.
- (f) The number and salaries of the teachers.
- (g) The fees to be charged in each class.
- (h) The amount of aid sought.
- (i) The treasury at which the grant, if sanctioned, is to be payable.
- (j) The existence of other schools of all classes within a distance of four miles.

10. An application for a grant is made either directly to the Circle Inspector, or to the District Deputy Inspector, who forwards it with his remarks to the Inspector. The Inspector, after taking the opinion of the Magistrate upon his proposals, forwards the application to the Director for sanction. If the Magistrate and the Inspector differ, the decision rests with the Director.

11. Grants shall in no case exceed in amount the sums to be expended from private sources, except in special cases, under special orders of Government. Municipal contributions will be reckoned for this purpose as receipts from public sources.

12. Aided places of instruction are divided into the following classes:—

Colleges—In which students who have passed the University Entrance Examination are educated in the University Course or any part of it.

High Schools—In which students are educated up to the standard of the Entrance Examination.

Middle Schools—In which the scholars are educated up to the middle English or middle vernacular scholarship standard.

Primary Schools—In which the scholars are educated up to the upper or lower primary scholarship standard.

Girls' Schools—Including agencies for *zanana* instruction.

Training Schools—For the training of masters and mistresses.

Special Schools—For instruction in special subjects.

Grants are also given in certain cases in aid of boarding establishments.

13. Grants are of two kinds—annual grants and special grants.

ANNUAL GRANTS.

14. For colleges the grants shall not exceed one-half of the income guaranteed from private sources, and in Calcutta they shall not exceed one-third of such income.

15. For high schools the grants shall not exceed one-half of the income guaranteed from private sources, except in the districts of—

Beerbhoom,	Chittagong,
Dinapore,	Tipperah.
Rungpore,	Noakhally,
Bogra,	The Patna Division,
Darjeeling,	„ Bhagulpore „
Julpigoree,	„ Orissa „
Mymensingh,	Chota Nagpore „
The island of Dhukin Shahbazpur in	
Backergunge,	

in which the grants may equal two-thirds of the income so guaranteed.

16. For middle schools, in which the expenditure is more than Rs. 40 a month, the grants shall not exceed two-thirds of the income guaranteed from private sources, except in the districts mentioned in the last rule, in which the grants may equal the income so guaranteed.

17. For primary schools, as well as for girls' schools, training schools, and special schools the grant shall not exceed a sum equal to the full amount of the income guaranteed.

18. The amounts above laid down are *maximum* amounts, and it must be understood that the *maximum* grant will not in all cases, and as a matter of course, be sanctioned.

19. Grants will be sanctioned ordinarily for a term of three years; but the Inspector may at any time during its currency recommend the revision of any grant. A grant should ordinarily be reduced on renewal, when this can be done without serious loss of efficiency. In this way money will from time to time be set free, and the Department will be able to aid new schools even though the grant-in-aid allotment remains stationary. Notice of any proposed reduction shall in all cases be given to the managers, who shall be allowed an opportunity of stating any objection that they may have to the reduction.

20. When a grant is sanctioned, the managers shall sign an agreement on stamped paper to the effect that they will conduct the school in accordance with the conditions of the grant.

21. The sanction of a grant is conveyed in the following form* :—

Office Memorandum of the Director of Public Instruction.

(1) A grant of Rs. _____ a month is sanctioned from the _____ 18 _____
for the _____ school at _____ in zillah _____, on the following
conditions :—

(a)—That Rs. _____ a month at least be regularly contributed from
private sources.

(b)—That the following scale of expenditure be maintained, subject to
any alteration that may be sanctioned by the Inspector.

Rs. A. P.

Head Master .

Second do.

Third do.

Do. do.

Do. do.

Do. do.

Servants } In the case of girls'
Contingencies } schools only.

(2) The grant is payable every month.

(3) The monthly bill (in form B annexed) must be sent to the Inspector for counter-signature, and must be accompanied by a certificate (in form C) that all salaries for previous months have been paid in full.

(4) The monthly bill and the certificate must be signed by the Secretary of the school.

(5) The bill is countersigned on the distinct understanding that the salaries and other charges certified by the Secretary to have been paid have actually been paid.

* In the case of colleges the form is modified.

(6) Salaries for service in any month become due on the first day of the following month.

(7) The appointment and dismissal of every teacher shall be notified to the department. No appointment shall be confirmed until it has received the sanction of the department; and the department shall have power to inquire into any case of the dismissal of a teacher.

(8) The grant is liable to be reduced or withdrawn if the payment of any teacher's salary is delayed for more than two months after it has become due.

(9) The grant is liable to be reduced or withdrawn if the school is unfavourably reported on as regards the attendance or proficiency of the scholars.

(10) The grant is liable to be reduced or withdrawn if the managers keep their accounts in a negligent and untrustworthy manner, or if they send up incorrect accounts, or if they fail to transmit punctually the periodical returns required by the department, or if the school-house is unfit for the purposes of the school, or is untidy or dirty, or if the department is otherwise dissatisfied with the management of the school.

(11) The grant is liable to be reduced or withdrawn if the teachers are inefficient, or if they are absent from duty otherwise than in accordance with the rules of the department, or if they keep the school registers in a negligent or untrustworthy manner.

(12) Holidays are not to exceed 60 days in the year, exclusive of Sundays, except under peculiar circumstances and with the sanction of the Inspector.

(13) Every new election to the Committee of Management must be notified to the Inspector under the signatures of the Secretary and of the member or members elected.

(14) Every change of Secretary must be notified to the Inspector under the signatures of the new Secretary and the Members of the Committee of Management.

(15) All receipts from whatever sources or for whatever purposes collected must be entered in the account book of the school, which shall be open to inspection and examination by any officer appointed by Government for that purpose.

(16) No part of the previous balance of a school shall be spent without the sanction of the Inspector, except for payment of the sanctioned establishment, in order to make up any deficit in the private contributions in any particular month.

(17) No new building shall be constructed for the school until the plan and estimates have been approved by the Inspector.

(18) Government may claim a fair share of any balance at the credit of a school at the time of its abolition, as well as of the sale proceeds of any school-house or furniture towards the erection or purchase of which a grant may have been made by Government.

SPECIAL GRANTS.

22. Grants may be given to managers of schools in aid—

(a) Of erecting, enlarging or furnishing school buildings.

(b) Of executing extensive repairs.

(c) In special cases, of paying off debts incurred in erecting or enlarging school buildings.

NOTE.—Expenditure in the purchase of buildings may be treated as expenditure in the erection of buildings.

23. Except in the case provided in the foregoing rule, no grant shall be made in consideration of former expenditure on school buildings.

24. In general, the proportion of the Government contribution made under rule 22 shall not exceed the proportion laid down in rules 14 to 17 for schools of the same classes.

25. Before a building grant is sanctioned, the site, plans, estimates, specifications, title and trust deed must be approved by the Director of Public Instruction. If the school receives no monthly grant, the managers must also satisfy the department that it is likely to be maintained in efficiency, and that it will be open to inspection.

26. The trust deed must declare the building to be granted in trust for school purposes only. It must also provide for the legal ownership of the premises, for the proper maintenance of the building, and for the inspection and management of the school.

NOTE.—This rule does not preclude the managers from using the building for other purposes when not required for the purposes of the school.

27. No grant is finally sanctioned until a certificate is received from the managers, setting forth that the funds in their hands will, when added to the grant, be sufficient to meet all claims and to close the account.

28. Advances may be made from time to time out of the sanctioned grant on receipt of a report from the Public Works Department that the work is proceeding satisfactorily.

29. The grant is not paid in full until—

(1). A report is received from the Public Works Department or other sufficient authority that the building is satisfactorily completed.

(2). The trust deed is duly registered, and a copy lodged with the Department.

30. Loans may also be made to managers of schools for the erection of school buildings. The amount of such loan shall generally be limited to the amount of any grant claimable under rule 24. The building shall be mortgaged to the Government as a guarantee for the repayment of the loan, and a term shall be fixed within which the loan is to be repaid. Interest at a rate not exceeding 4 per cent. may, if necessary, be charged.

(FORM A.—In which application must be made to the Inspector for new grants-in-aid or for renewal of old grants.)

Cutting out a <i>koorta</i> , sewing on buttons and making strings, and making button-holes : or, Arithmetic to Standard VII.	Gathering and sewing on a band, darning, and herring-boning : or, Prani Brittauta.	Cutting out and making a <i>piran</i> ; and fancy-work : or, Padartha Bidya.
tional subject. lish Lan- uage.	Step by Step	Royal Reader I; dictation; nouns and verbs.	Royal Reader II; dictation, parts of speech.	Royal Reader III; letter writing, easy parsing.	Royal Reader IV; letter writing, parsing.

TRANSFER RULES—COLLEGES.

I.—A STUDENT applying for admission to a college affiliated to the University in Arts, or Law, shall be required to produce a certificate from the Principal of the college in which he was last reading. But if he applies, at the beginning of a session, for admission to the first year or to the third year class, the certificate of having passed the last Entrance or First Arts Examination respectively shall be accepted in lieu of such certificate. A student who has failed at the First Arts or the B. A. examination may be admitted in the following session to the second or fourth year class of the college, on production of the Registrar's receipt.

II.—The certificate shall run as follows:—

_____ is permitted to remove his name from the college register. He has been a student in the _____ class from _____ to _____ 18 ____; during that period the roll of the class was called _____ times, and _____ was present on _____ of these occasions. His character and conduct have been _____. College fee paid for _____.

III.—The certificate is to be given without any avoidable delay. The only grounds on which it can be refused are (1) gross misconduct, (2) failure to pay the sums due to the college, including college fees and fines and transfer fee (if any). If a certificate is refused, the cause of refusal shall be notified in writing to the applicant.

IV.—Fees are annual charges, though for the convenience of students they are levied monthly. They are therefore payable for the vacation months equally with others. If a student applies for transfer in or after the month of January, he shall be liable to pay fees in that college up to the close of the session. The transfer fee shall in no case exceed the ordinary admission fee.

V.—All questions arising between one Principal and another respecting the enforcement of these rules shall be referred as soon as possible to the Director of Public Instruction.

VI.—If a student be found producing a false certificate, or making a false statement as to his attendance at any college, he shall be liable to expulsion, and shall be reported to the Director of Public Instruction.

VII.—Wilful transgression of any of the foregoing rules will render a college liable to forfeit the right of sending up candidates for Government scholarships, and to be reported to the University.

TRANSFER RULES—HIGH SCHOOLS.

I.—A BOY, before he is admitted to a high school, shall be required to state in what school he has last been reading, and to produce a certificate from the head-master of that school. He should also be required to bring with him a letter of application from his parent or guardian. If he has failed at the previous Entrance examination, and applies for admission at the commencement of the following session, the Registrar's receipt shall be accepted in lieu of a certificate.

II.—The certificate shall run as follows:—

"Certified that—was in the—class of the—school, and leaves with a—character. All sums due by him to this school have been paid. He has (or has not) passed the annual examination for promotion to the—class."

III.—The certificate is to be given without any avoidable delay. The only grounds on which it can be refused are (1) gross misconduct, (2) failure to pay the sums due to the school, including schooling fees and fines and transfer fee (if any). If a certificate is refused, the cause of refusal shall be notified in writing to the applicant.

IV.—Fees are payable for the vacation months equally with others. If a boy applies for transfer in or after the month of February, he shall be liable to pay fees in that school up to the close of the session. No transfer fee shall be charged to any pupil leaving a school at the close of a session, nor shall it in any case exceed the ordinary admission fee.

V.—A boy coming for admission shall not be placed in a class higher than that in which he was in the school he has left, or if he has passed the annual examination for promotion in that school, in the next higher class. This rule shall apply to admissions to the first and second classes only. Thus, a boy failing at the annual examination of the third class of one school cannot be admitted to the second class of another.

VI.—The fact of a boy appearing for admission without having undergone the annual examination of his old school must be regarded, unless the reverse is certified to by his former head-master, as sufficient evidence of his not having been fit for promotion; he should therefore be admitted into the class in which he was reading in the other school.

VII.—After admission under the foregoing rules, no boy shall be promoted to a higher class before the next annual examination of the school.

VIII.—All questions arising between one head-master and another respecting the enforcement of these rules shall be referred as soon as possible to the Inspector of Schools (or in Calcutta, to the Director of Public Instruction).

IX.—If a boy be found producing a false certificate, or making a false statement as to his attendance at any school, he shall be liable to expulsion, and shall be reported to the Department.

X.—Wilful transgression of any of the foregoing rules will render a school liable to forfeit the right of sending up candidates for junior scholarships, and to be reported to the University.

FORM A—(continued.)

PRESENT STATE OF THE SCHOOL.

To be filled up if the School has been in existence for six months and upwards.

I declare that the sums stated above in column II are due for the month of _____ and that all salaries for previous months have been paid in full. In consideration thereof I apply for the Government grant of Rs. _____

The _____ Secretary of the School.

NOTES—1. This account is for the month for which the accompanying grant-in-aid bill is drawn.
2. In the abstract of receipts must be credited against (A) the whole amount of fees and fines received during the month.
3. Against (A) and (B) together must be credited at least the amount guaranteed as the condition of the grant.
4. If the charges credited as being due are less than the charges specified in the grant, a proportionate reduction is to be made in the amount of the accompanying bill presented for countersignature.
5. The Secretary will send this account in duplicate, if required to do so by the Inspector.
6. If the declaration at the foot of this account is falsely signed, the Secretary is thereby rendered liable to all the penalties of clause 415 of the Penal Code.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 10th September 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BUCKHAW DIV.	1 Bardwan. Sept. 10, '87	3.13	Weather—very hot and sultry. Paddy suffering much from want of rain all over Cutwa and Culna: prospects fair elsewhere, but rain nevertheless wanted. Prices for the most part stationary, but rising in Cutwa. Cholera in the Sudder; fever also prevalent. Rain now falling.
	Culna ...	0.79	
	Cutwa ...	0.51	
	Raneegunge ...	2.67	Weather—very hot. Rain much wanted in all parts of the district. <i>Aus</i> rice in some places already damaged, and so will the <i>aman</i> crop on high lands also be if it do not rain soon. <i>Kelas</i> paddy flowering and <i>chali</i> is being reaped. <i>Nirikalai</i> doing well. Sugarcane is being irrigated. Prices continue stationary. Public health good.
	2 Bankura „ 10, '87	0.51	
	Bishenpur ...	1.08	
	3 Beerbhoom „ 10, '87	2.79	Weather—sultry. Rainfall very beneficial to young <i>aman</i> rice; but more urgently needed. Sugarcane flourishing. Public health not satisfactory; a good deal of fever and some cholera abroad. Cattle-pox also rife.
	Rampur Haut ...	3.09	
	4 Midnapore „ 10, '87	0.88	Weather—muggy. State and prospects of crops good. More rain wanted.
	5 Hooghly „ 10, „	Nil	
PRESIDENT DIV.	Serampur ...	0.43	Weather—hot and sultry, but to-day (10th) cool and damp. <i>Aus</i> paddy being reaped. Timely rain now falling will, if general, improve the prospects of winter rice which the dry weather has affected. A little fever and cholera reported.
	Jehanabad ...	1.75	
	Howrah „ 10, '87	1.00	Weather—a sultry week terminating with clouds and rain. Reaping of <i>aus</i> and jute in progress. Prospect of sugarcane promising. Paddy on low lands good. More rain wanted for crops on high lands. Fever to some extent in south of the district.
	Oolooberiah ...	2.52	
	<i>Central Districts.</i>		
	6 24-Pergha., Sept. 10, '87	1.30	Weather—unsettled: cloudy and very hot with occasional showers. Rain has been deficient this week and is badly wanted in Barrackpore, Dum-Dum and parts of Bunsirhat and Sudder. Prospects of jute, <i>aus</i> and sugarcane favourable. Public health fairly good for the time of year.
	7 Nudda „ 10, „	0.23	
	Kushtea ...	2.05	Weather—very sultry and oppressive. <i>Aus</i> nearly harvested; outturn fair. <i>Aman</i> in some parts could not be transplanted for want of rain. Fever prevalent. Rivers rising steadily.
	Meherpur ...	1.48	
	Chudanga ...	1.43	
	Ranaghat ...	Nil	Weather—seasonable. <i>Aus</i> paddy harvested. Transplantation of <i>aman</i> nearly completed. Rain of the week has done good. Public health generally good.
	8 Khoolna „ 10, '87	3.60	
	9 Jessore „ 10, „	1.12	Weather—very hot; scanty rain. Harvesting of <i>aus</i> paddy continues. Prospects good. Rain wanted for <i>aman</i> paddy on high land.
	Jhenidah ...	0.63	
RAJSHAHY DIV.	Magurah ...	0.34	Weather—very hot; rain at intervals. Harvesting of <i>bhazdoi</i> paddy almost over. Prospects of <i>aman</i> still good, except in Kandi, where it is suffering from want of rain. Sowing of <i>til</i> has commenced. Sugarcane and jute progressing. Public health good.
	Narail ...	0.25	
	Boungong ...	0.45	
	10 Moorsheadabad „ 10, '87	2.78	Weather—heavy rain in the beginning of the week; clear and very hot in the latter part. Transplantation of <i>aman</i> nearly finished. Harvesting of <i>bhazdoi</i> and jute continues. Rice 23 seers per rupee.
	Lalbagh ...	4.50	
	Kandi ...	1.15	Weather—extremely hot. Cutting of <i>aus</i> paddy continues. Prospects of crops generally good. Fever rather prevalent.
	Jungipur ...	6.73	
	11 Dipayal „ 10, '87	5.75	Heavy rain very favourable to the <i>aman</i> crop. Tobacco is being sown. Public health fair for the time of year.
	Thakurgaon ...	8.15	
	12 Rajshahye „ 10, '87	4.51	Weather—very hot. State and prospects of crops satisfactory. Public health fair.
	Natore ...	3.20	
DACC DIVISION.	Nowgong ...	6.98	Weather—hot. Rivers rising. General health and prospects of crops good.
	13 Rangpur „ 10, „	5.85	
	Kurigram ...	9.13	Weather—sultry. State and prospects of crops good.
	Nilphamari ...	8.67	
	Gaibanda ...	9.86	Weather—early in the week rainy; latterly hot and sultry. Roaping of <i>bhazdoi</i> and jute going on; outturn below the average. Sugarcane doing well. Transplantation of <i>aman</i> rice nearly completed everywhere. High floods in the east of the district. Public health good. Cattle-disease prevalent in places.
	14 Bogra „ 10, '87	6.56	
	Sherpur ...	6.24	Weather—very hot and fine. Prospects of crops continue good, but rain much wanted. Jute is being cut; outturn good. <i>Aus</i> nearly reaped. Public health good.
	Nowkhilla ...	3.70	
	15 Pubna „ 10, '87	2.09	Weather—seasonable. Rivers rising. <i>Aman</i> doing well. Jute-steeping commenced. Public health good.
	16 Darjeeling „ 10, '87	6.36	
DACC DIVISION.	17 Jalpigoree „ 10, „	14.09	Weather—very hot. Cultivation of <i>aman</i> going on. Prospects good. More rain wanted. General health good.
	Falakata ...	34.70	
	18 Dacca, Sept. 10, '87	2.34	Weather—very hot. Heavy rain on 3rd. Transplanting of rice continues. Prospects of crops good.
	Manickgunge ...	Nil	
	Munshigunge ...	1.39	
DACC DIVISION.	Naraingunge ...	1.5	
	19 Farreedpur „ 10, '87	0.82	
	Goalundo ...	0.11	
	Madaripur ...	1.10	
	20 Backergunge „ 9, '87	2.15	
DACC DIVISION.	21 Mymensingh „ „ '87	2.23	
	Jamalpur ...	6.77	
	Kishoregunge ...	4.68	
	Atta ...	1.59	
	Netrokona ...	1.63	

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
CHITTAGONG DIV.			
22	Eastern Districts—contd. Chittagong, Sept. 13, '87	2.42	Weather—hot. <i>Amra</i> and sugarcane thriving. Cholera reported; public health otherwise good. Prices stationary.
23	Noakbolly „ 9 „	1.94	Weather—hot and close. Prospects of crops fair. More rain much wanted.
	Fenny „ „	3.53	
24	Tipperah „ 8 „	1.03	Weather—very hot. Very insufficient rain. State and prospects of crops good, but much rain sadly wanted. Injury is being caused already to the crops in the east of the head-quarters sub-division.
	Brahmanbariah „ „	1.81	
	Chandpur „ „	0.90	Weather—sunny with occasional showers of rain throughout the week. <i>Jum</i> paddy ripening. Cotton doing well. Transplanting in low lands nearly over.
25	Chittagong Hill Tracts „ 6 „	1.87	
	Hill Tipperah „ 8 „	2.89	Weather—hot; more rain wanted. Transplanting of <i>amra</i> paddy still going on. Prospects of sugarcane and <i>joom</i> crops fair. Public health good.
BEHAL.			
26	Patna Sept. 10, '87	0.87	Weather—hot. Transplantation of paddy still going on in some places. Reaping of <i>bhadoi</i> crops almost finished; outturn satisfactory. Cholera still reported from Behar and Dinapore sub-divisions, but is decreasing.
	Barh „ „	4.70	
	Behar „ „	3.31	Weather—very hot. <i>Bhadoi</i> being harvested. Paddy suffering for want of rain. Cholera and fever still prevalent.
27	Gya „ 10 „	1.34	
28	Shahabad „ 10 „	1.09	Weather—bright and close. Transplanting of paddy progressing rapidly, but more rain wanted. <i>Bhadoi</i> crops being harvested. Prospects continue good. Public health generally good. Cholera much abated, but not completely disappeared. Prices stationary.
	Buxar „ „	1.91	
	Susseram „ „	0.65	Weather—clear. Prospects of <i>bhadoi</i> favourable. Harvesting of <i>makai</i> , <i>marua</i> and <i>aus</i> in progress. Rice transplantation nearly over. Price of common rice stationary. Public health generally good.
	Bhambahal „ „	1.45	
29	Durranga „ 10 „	1.63	Weather—first part of the week rainy, latterly very hot and rainless. Crops very promising. <i>Bhadoi</i> being harvested. Some cholera still reported.
	„ „	„	
30	Muzaffargarh „ 10 „	2.88	Weather—close and sultry. Prospects of crops continue good. Cholera fast abating. Inundation subsiding.
	Hajipur „ „	2.31	
	Sitamarhi „ „	4.67	Weather—very hot and sultry with bright sunshine for the last two days. <i>Bhadoi</i> crops continue to be hopeful. Prospects of <i>aghani</i> promising. Prices stationary. Public health not very good.
31	Saran „ 10 „	1.85	
	Sewan „ „	3.93	Weather—bright and very close. State and prospects of standing crops continue favourable. <i>Bhadoi</i> crops nearly harvested. A little cholera still lingers in the Beguserai sub-division; otherwise public health good. Ganges in flood.
	Gopalgunge „ „	8.24	
32	Chumpran „ 10 „	3.11	Heavy rain early in week followed by sultry bright weather. Transplanting finished and late rice promising. Rainfall sufficient for the present, but more will soon be wanted. <i>Bhadoi</i> harvest with fair outturn in north and south continues. Cholera abating.
	„ „	„	
33	Monghyr. Sept. 10, '87	3.48	Report not received.
	Beguserai „ „	5.52	
	Jamui „ „	3.19	Heavy rain on 3rd, 4th and 5th; since then bright sun and excessive heat. Harvesting of <i>bhadoi</i> crops going on with good outturn. Transplanted winter paddy doing well. Common rice selling at 21 seers per rupee. Fever rather prevalent.
34	Bhagulpur „ 10 „	3.29	
	Mudhpoorah „ „	7.66	Weather—rather hot. Rainfall insufficient. More rain wanted to keep the rice fields moist. Transplanting nearly over. Outturn of <i>bhadoi</i> crop fair. Fever in Rajmehal; otherwise public health fairly good.
	Soupool „ „	1.46	
35	Purneah „ „	Weather—fair and hot. <i>Beali</i> rice is being reaped with moderate outturn. <i>Sarad</i> rice plants growing well, but want rain urgently. In some places want of rain very keenly felt. Price of rice almost unchanged. Cholera still continues in many places. Cattle-disease reported from the interior.
36	Maldah „ 10 „	10.32	
	Chanchal „ „	3.71	Report not received.
	Silgunge „ „	5.59	
	Chajole „ „	5.40	Weather—cloudy, but hotter than in previous week. <i>Beali</i> paddy ripening. Weeding of <i>sarad</i> crop advancing. Prospects generally good except in parts of Chandbally and Baliapal thanas, where rain is much wanted. A few cases of cholera reported; public health otherwise good.
37	Sontal Pargha „ 10 „	2.07	
	Dooghur „ „	2.00	Weather—bright; occasionally cloudy. Rice and other crops doing well, except in places where rain is much wanted. General health fair, but cases of cholera continue to be reported from several thanas.
	Godda „ „	1.60	
	Jamtara „ „	3.09	Weather—hot. More rain wanted. Early paddy is being vigorously reaped. Prospects of winter crop fair. Prices as before. Cholera still prevails; public health otherwise good.
	Pakour „ „	7.07	
	Rajmehal „ „	2.45	Weather—hot. Rain much wanted in parts. Rain required for upland paddy. Indian-corn and <i>gora dhan</i> are being cut. General health good.
	„ „	„	
	„ „	„	
ORISSA.			
38	Cuttack Sept. 9, '87	0.43	Weather—hot. More rain wanted. Early paddy is being vigorously reaped. Prospects of winter crop fair. Prices as before. Cholera still prevails; public health otherwise good.
39	Pooree „ „	
40	Balasore „ 9 „	1.07	Weather—hot. Rain much wanted in parts. Rain required for upland paddy. Indian-corn and <i>gora dhan</i> are being cut. General health good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Sept. 9, '87	3.18	Weather—hot. More rain wanted. Early paddy is being vigorously reaped. Prospects of winter crop fair. Prices as before. Cholera still prevails; public health otherwise good.
42	Lohardagga „ 10 „	1.69	
	Palamow „ „	8.93	Weather—hot. Rain much wanted in parts. Rain required for upland paddy. Indian-corn and <i>gora dhan</i> are being cut. General health good.
43	Singbhoom „ 9 „	0.32	
44	Manbhoom „ 10 „	1.38	Weather—hot and close. Rainfall in the Gandipore sub-division and in Bagmandi. More rain is badly wanted in Taghanathpur and Gourangdi and generally throughout the east and south of the district. Public health good.

The mean pressure of the seven days Inches.
 The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.650

The total number of hours of bright sunshine Hours.
 The maximum possible number of hours of sunshine 86.9

°
 The mean temperature of the seven days 83.6
 The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83.2
 The extreme variation of temperature 13.9
 The maximum temperature 91.3

Miles.
 The highest velocity of the wind in one hour 11
 lbs.

The highest pressure of wind on one square foot Not measureable.

%
 The mean relative humidity 85
 The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 86

Inches.
 The total fall of rain from 4th to 10th September 1887 1.42
 The average fall of the corresponding period for 24 years, S. G.'s Office ... 3.37
 The total fall from 1st January to 10th September 1887 47.52
 The average fall of the corresponding period for 24 years, S. G.'s Office ... 52.56

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloom, d drizzling rain, t thunder, p passing temporary showers, Δ dew, = fog, < lightning.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, DURING THE MONTH OF AUGUST 1887.**

THE normal meteorological conditions in Bengal during August resemble those of July to a very great extent, and the month is therefore nearly as important as July from a meteorological point of view. The south-west monsoon winds continue to blow over the province with almost undiminished force during the greater part of August, though towards the end of the month, or commencement of September, wind velocities begin to fall off. The normal rainfall in August is distinctly, though slightly, smaller than in July, and this would tend to show that the monsoon current even in August commences to weaken. The greater part of the rainfall in Bengal in August is undoubtedly brought up by the Bay of Bengal current, but a considerable part of the rainfall at the western stations of the province is also due to the Bombay branch of the current, which, interacting in these districts with the Bengal branch, causes ascensional air motion, and consequently increased precipitation of rain. The Bay of Bengal branch alone gives the heaviest rainfall to the southern, eastern, and northern districts, but the interaction just mentioned increases the rainfall in the western districts, and thus supplements the action of the Bengal current, and tends to produce greater uniformity of rainfall over the whole province.

The actual amount of rainfall in August will no doubt depend mainly on the strength and volume of the Bay of Bengal monsoon current, the heaviest rainfalls usually occurring in the eastern and northern districts, and the amount slowly diminishing towards the western districts; but the actual distribution will be affected by the causes which have been discussed in the previous monthly summaries. One of the causes which will produce marked variations from the normal distribution of rainfall will be the formation and passage of areas of barometric depression or small cyclonic storms, which bring large amounts of rain to the districts through which they pass. The formation of such storms is a prominent characteristic of many rainy seasons, though they are to a certain extent absent in others: and as the line of country through which they pass varies very considerably, they are prominent causes in modifying the distribution of rain in particular years. A second cause which modifies the normal distribution of the rainfall is the varying strengths of the two currents, and the amount and position of their interaction, and it will be seen that, if from any cause a larger amount of interaction than usual takes place over the western districts of the province, the rainfall will be increased by a corresponding amount.

The normal distribution of rainfall during the month is comparatively simple. The two localities in which rainfall is heaviest, and where the amount exceeds 20 inches, include, first, the Chittagong, Noakholly, and Backergunge districts; and second, the Julpigoree, Cooch Behar, and Darjeeling districts. The area which receives a rainfall of between 20 and 15 inches starts from Sangor Island and runs nearly parallel to the sea coast, then turns to the north, runs parallel to the Tipperah and Sylhet hills, and through the centre of the Rungpore district to Kissengunge in the Purneah district. The greater part of Chutia Nagpur, and of South-West, Central, East and North Bengal receives a rainfall of from 12 to 15 inches, while the greater part of Behar receives only from 10 to 12 inches. The central districts of Behar receive the smallest amounts of rain, the average being generally rather less than 10 inches.

Meteorology of the month.—During the last week of July a small cyclonic storm which had formed at the head of the Bay had advanced inland through South-West Bengal and had filled up and disappeared near Sutna on the 28th of July. In the rear of the storm a very strong current set in from the Bay of Bengal, and at the commencement of August conditions were decidedly favourable for general rainfall in Bengal. The strength of the monsoon current blowing over Bengal at the commencement of August may be shown by the fact that from the 1st to the 2nd the average wind velocity at Sangor Island was no less than 30 miles an hour. This velocity, however, was exceptionally high, and it speedily became smaller; but for the first ten or twelve days of the month a fairly strong monsoon current continued to blow over the province, and the only feature of change or of interest was the alternate increase and falling off in the strength of the two branches of the monsoon current—for some days the current from the Bay of Bengal holding entire possession of the province, when it would be then partially driven back by the westerly current from the Arabian sea, only to be again re-established a few days subsequently. About the 12th of August, however, it became evident that both branches of the monsoon current were becoming decidedly weaker as rain-bearing currents, and on this day the area of rainfall rapidly contracted, and the greater part of the province received little or no rain. A partial break in the rains then set in, which lasted only three or four days in some districts, and about a week in others, and during this period a feeble cyclonic storm was formed in the north of the Bay, which only crossed the west coast to the south of Gopalpur on the 19th. This storm naturally formed a prominent feature in the meteorology of this part of the month, and during its formation and advance towards the west coast the monsoon winds were mainly deflected towards it, and rain to a great extent ceased in Bengal, and it was only after the feeble storm had advanced inland that it again became possible for the

monsoon winds to blow over Bengal. Rain therefore became pretty general in Orissa, South-West Bengal, and East Bengal on the 19th and 20th, but the general rainfall only reached North Bengal and the greater part of Behar and Chutia Nagpur on the 21st and 22nd. The monsoon current blowing over Bengal was, however, not very strong, and as usual the two branches of the current alternately strengthened and weakened, giving rise to a certain amount of interaction between them for some days, till on the 26th a distinct cyclonic circulation of winds set up over South-East Bengal, and this was accompanied by the formation of an exceedingly feeble area of low pressure. On the 27th the very feeble depression had moved in a westerly direction and was in South-West Bengal, and was moving into Chutia Nagpur; it was still accompanied by a feeble circulation of winds and by rather heavy rain, and amounts exceeding two inches were received at a considerable number of stations in South Bengal and in Chutia Nagpur, while rather heavy rain also set in over the northern districts on the same day. On the 28th the depression had disappeared in a westerly direction, and a moderate south-easterly and southerly current from the Bay of Bengal set in over the whole province, but the rainfall was confined to a few light showers up till the 30th, when, though the general conditions had scarcely altered, heavy and rather general rain commenced in the northern districts of the province, and on this day Protabgunge, in the North Bhagulpur district, received 7·35 inches, and Buxa 4·21 inches, and over the southern districts moderate showers were rather numerous. This heavy rain in the north of Bengal on the 30th set up a slight cyclonic circulation of winds, which was distinctly noticeable on the 31st, and pressure also became slightly low over the central and northern parts of the province, and with these favourable conditions for rainfall, particularly heavy rain was received over a considerable part of North Bengal. On this day Julpigoree reported the excessive fall of 11·47 inches, Mickligunge one of 7·75 inches, Fallacotta 7·51 inches, Protabgunge 5·11 inches and Kaliagunge 4 inches; while moderately heavy showers became pretty numerous over the whole province. At the close of the month therefore conditions were again rather favourable for rainfall over the whole of Bengal.

Barometric depressions of the month.—It will be seen from the foregoing summary that only one barometric depression of any importance was formed, while the second, which lasted only on the 26th and 27th, was exceedingly feeble. The second was formed in South-East Bengal, and moved in a westerly direction through South-West Bengal and Chutia Nagpur, and it had practically disappeared from the province on the 28th. The first was decidedly more important, as it produced a distinct break in the rains in Bengal. Its history may be briefly described as follows:—

Barometric depression of the 14th to the 20th of August.—On the 13th the conditions over Bengal and the sea area to the south of it were those of an ordinary very light monsoon, except that pressure was decidedly low along the coast of Madras from Gopalpore to Masulipatam. Winds also were rather more strongly easterly along the west coast than is usual. Conditions remained almost unchanged for the following two days at the stations in the northern half of the Bay and in Bengal, but the strength of the monsoon blowing in the south of the Bay began to increase very considerably. On the 16th winds became north-easterly at many stations in Bengal, and also along the Orissa coast and at Akyab, while to the south winds were westerly. It was therefore clearly evident on this day that a distinct depression had formed in the centre of the Bay. On the 17th the centre of the feeble storm was off the South Orissa coast, but it had not strengthened to any material extent, though there was a distinct cyclonic circulation of winds accompanying it. On the 18th it had approached rather nearer the land, but it still remained a feeble storm, and on the morning of the 19th it was crossing the South Orissa coast a little to the south of Gopalpore, and the centre of the storm on this day was a little distance inland. The storm afterwards drifted into the Central Provinces, where, after a day or two, it filled up. It was a remarkably persistent storm, though the barometric depression at its centre was feeble, and though the winds in connection with it were comparatively light; but at sea it gave rise to somewhat squally weather and rough sea.

Strength of the monsoon current during August.—The only actual measure of the strength of the monsoon current is obtained by recording the wind velocity. This record is manifestly important though imperfect, for it only deals with one of two important factors, for the monsoon current may not only vary in velocity, but also in depth or volume, and probably of the two, the latter will be the more important factor in influencing the rainfall. The estimation of the second of these factors is impossible, and thus the actual strength of the monsoon current blowing can only be judged by the measurement of the wind velocity. At the end of August the strength of the monsoon undoubtedly begins to diminish, but, on the other hand, if the wind velocities measured during August are equal to or above the normal, there is a reasonable probability that the strength of the monsoon (i.e., both velocity and depth) is fully equal to the normal, and that the monsoon will continue to blow, and to give rain for the normal period. In the following table the actual and normal wind velocities are given at the typical coast stations at the head of the Bay, and also at five or six of the most important inland stations of the province. The average of the whole of the eleven stations shows that the actual daily wind velocity has been 129 miles against the normal 126 miles. Out of the eleven stations, however, seven show a velocity distinctly smaller than usual, while at Saugor Island and Hazaribagh velocities have been much above the normal. If these two stations are left out of the calculation (as

there is evidently something abnormal in them), both in the determination of the mean for the month and the normal, the mean velocity for August has only been 98 miles against the normal 103 miles. These facts would distinctly point to the probability that the monsoon current blowing in August was decidedly weaker than usual, and this is borne out by the diminished rainfall. Another fact which has been noticeable throughout the month is the strong westerly element which has frequently been present in the wind directions. This being the case and the monsoon being weaker than usual, there is perhaps a possibility that the present monsoon, as derived from the Bay of Bengal, will close rather earlier than usual.

Average daily wind velocity in miles for August.

STATIONS.	Normal.	Actual for August 1887.	STATIONS.	Normal.	Actual for August 1887.
Akyab ...	75.6	72	Cuttack ...	70.5	52
Chittagong ...	144.8	112	Burdwan ...	88.5	75
Dacca ...	148.1	138	Berhampore ...	98.8	94
Jessore ...	98.7	89	Patna ...	78.4	79
Calcutta ...	123.7	125	Hazaribagh ...	179.0	221
Saugar Island ...	278.0	366	Average of the eleven stations ...	125.8	129.3

Pressure.—The variations of pressure have as a rule not been very large during the month. At the commencement of August pressure was in excess of the normal by amounts varying from about 0.03" to 0.05". The largest excess pressures at this time were recorded in Orissa and South-West Bengal, and the smallest in Assam. For the second week in the month the excess pressure rather increased to about 0.06", but the seat of maximum excess was transferred to the northern parts of the province and to Sibsaugor, while at the extreme western stations the excess was decidedly smaller. For the third week the pressures were largely influenced by the existence of the depression in the Bay, and thus while in Orissa pressure was nearly normal, at Purneah an excess pressure of 0.114" was registered, and at Dacca one of 0.072". In Assam also the mean pressure was above the normal by 0.043". Conditions as to pressure then became far more nearly normal, and for the greater part of the remainder of the month pressure was generally slightly below the normal. For the whole province, taking into consideration only those stations at which observations have been recorded for some years, and which therefore yield reliable averages, it may be said that the mean pressure for the month has been above the normal by 0.035 inch. This excess pressure has been smallest in the southern and south-western districts, and largest in the northern districts, and particularly along the foot of the hills, where at Purneah it equals 0.062 inch and at Durbhunga 0.053 inch. In Assam pressure has also been pretty uniformly in excess, the mean pressure showing 0.028 inch in excess of the normal.

Temperature.—As is usual during the monsoon period, the variations of temperature have generally been small and of little importance, though during the break in the rains in the middle of the month temperature rose rather considerably. In the first week the mean temperature of Bengal was 0.7° in defect of the normal, while in Assam the defect was 0.8°. In the second week temperature was again below the normal, the defect averaging about 1.4° to 1.5° both in Bengal and Assam. In the third week temperature had become in excess generally by about 1°, and the excess continued, though in smaller amounts, up till the close of the month. For the whole month the average temperature in Bengal has been very slightly in defect of the normal, the defect equalling about a tenth of a degree. In Assam the mean defect has been rather larger, and it averages 0.3°.

Rainfall.—The comparison of the actual rainfall of the various great divisions of the province during August with the normal is most accurately and conveniently shown in the form of a percentage. The figures representing the rainfall for the month calculated in this way are included in the table below under the heading of August. This table really gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first eight columns giving the actual average rainfalls in each division in each month expressed as a percentage of the normal, while the ninth column gives the actual rainfall for the first eight months of the year expressed as a percentage of the

rainfall for the period. The figure 100 in this table will therefore represent a normal fall; a number larger than 100 an excess fall, and so on :—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	Actual rainfall of first eight months expressed as a percentage of the normal fall for the period.
Orissa ...	119	Nil.	137	60	183	66	91	83	91
South-West Bengal ...	302	2	252	56	139	82	105	76	96
East Bengal ...	613	14	306	34	71	70	80	71	80
North Bengal ...	530	8	274	114	155	139	63	97	115
North Behar ...	381	Nil.	127	109	177	135	59	111	107
South Behar ...	411	Nil.	263	188	423	70	83	83	167
Chutia Nagpur ...	500	Nil.	10	111	331	73	93	90	100

That is to say, in August North Behar has received a rainfall decidedly in excess of the normal, Chutia Nagpur and North Bengal have received falls nearly equal to the normal, South Behar and Orissa falls in decided defect, and South-West Bengal and East Bengal falls rather largely in defect of the normal.

In actual amounts North Bengal has received, the largest average fall, equalling 13·74 inches, and North Behar the next largest amount, 12·79 inches; East Bengal and Chutia Nagpur have received average falls between 11 and 12 inches, and Orissa, South Behar, and South-West Bengal amounts between nine and ten inches. These figures, however, represent only the average falls over the seven large divisions into which the province is divided for meteorological purposes, and the actual falls at different stations have varied much more largely than this. Thus the fall has varied between about fifty and five inches at various stations, for while Buxa in the Darjeeling Hills district has received 50·72 inches, Gyabanda in the Rungpore district has received 4·85 inches, Sherepore in the Bogra district 3·95 inches, Kishnagpur 4·6 inches, Magoora 4·79 inches, Maldah 4·76 inches, and Dhurmsalla in the Cuttack district 4·81 inches. These stations indeed appear to have been centres of particularly scanty rainfall throughout the month. These figures will indicate that the distribution of the rainfall during August has been very irregular, decidedly more irregular than is the case in most years. The Bombay branch of the monsoon, as has been previously indicated, has been decidedly strong, and the Bay of Bengal branch has therefore had a more easterly set, or has been deflected towards the east more than usual. At the same time the amount of interaction between the two branches has been more marked than usual over the western parts of the province. In the actual distribution of the rainfall in this month there appear to be no less than three areas of large precipitation, the first along the line of the hills to the north of the province, where falls of 30 inches and upwards are frequent; the second in South-East Bengal, where the falls rise to about 20 to 25 inches; and the third in the west of the province, where the falls are from 15 to 18 inches, and from these three centres rainfall diminishes in quantity towards the centre of the province.

Compared with the normal fall for the month, it is seen that there are two large and one small tract of excess rainfall, but that the whole of the remainder of the province, constituting probably about three-quarters of the whole, has been in very decided defect. The one large area of excess precipitation comprises the whole of Chutia Nagpur except the Hazaribagh district, the western stations in Orissa, Ranigunge, and the whole of the Bankoora district. The second large area runs along the line of the hills to the north of North Bengal and North Behar, and includes the greater part of Behar to the north of the Ganges, but does not include Chumparun, and also includes the Dinagepur and Rungpur districts; but, on the other hand, parts of the Rungpur and Darjeeling districts are in defect. The third area of excess precipitation comprises a small part of the Moorshedabad and Sonthal Pergunnahs districts. The excess falls generally vary up to about three inches, but in some cases they exceed five inches. The whole of the remainder of the province is in defect, a large part being in defect by amounts larger than three and in some cases five inches. The following are the principal areas of defect :—the greater part of the Patna district and part of the Gya district, and the following districts :—the South Bhagulpore, Maldah, Pubna, Bogra, Mymensingh, Dacca, part of Comilla, Furreedpur, Backergunge, Jessore, Khoolua, part of Nuddea, Burdwan, Birbhoom, Hooghly, Howrah, part of Midnapore, Pooree and Cuttack. In the Furreedpore, Dacca, Bogra, Pubna, and Maldah districts the average falls scarcely equal half the normal amount.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of August in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall at the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage

how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100:—

Percentage Table for August 1887.

DIVISION.	DISTRICT.	Normal district rainfall, August 1887.	Actual district rainfall, August 1887.	Percentage of actual to normal rainfall.	Percentage, excess (+) defect (—)

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returning spaces in the total rainfall column are left blank.

CALCUTTA, the 13th September 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS.
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
9TH OF SEPTEMBER 1887.**

At the close of the previous week conditions were fairly normal for the season, and on the 2nd instant, in particular, rainfall had been general over the whole province, and at many of the northern and eastern stations the falls had been heavy. Up till the 2nd the province had been almost entirely influenced by the monsoon current blowing from the Bay of Bengal, but on this day a westerly element appeared in the wind directions, showing that the Bombay branch of the current was again commencing to make itself felt. On the 3rd conditions had not altered to any material extent; decidedly strong monsoon winds were blowing over the whole Bay, and rainfall continued fairly general over the province. At the northern stations winds, however, were a little irregular, and on the 4th a distinct circulation of winds had set up over part of Behar and North Bengal, the centre of which appeared to be near Maldah. Conditions therefore became favourable for very heavy rain in the north of the province, and the following represent some of the heaviest falls recorded on this date:—Matari in the Purneah district 16·20 inches, Fallacotta (Julpigoree district) 15·09 inches, Mickligunge (Cooch Behar district) 12·50 inches, Julpigoree 11·96 inches, Debigunge 10·6 inches, Alipore Duar 9·06 inches, Buxa 9·82 inches and Matabhanga 8·78 inches. Over the remainder of the province also rainfall was fairly general, but only moderate in amount. On the 5th the feeble wind circulation had been transferred to South Behar, and pressure commenced to rise very rapidly, the rise exceeding a tenth of an inch at many of the stations in North Bengal and Behar; moderate to heavy rain continued to fall on this day, particularly in the north of the province, but it was clear that the area of rainfall was decreasing. On the 6th a rapid and almost complete change took place in the meteorological conditions. The minimum pressure recorded in the Bay retreated southwards to Cocanada; pressure again rose rapidly in Bengal, the rise in some instances exceeding a tenth of an inch. Winds became light and variable, and at neighbouring stations were frequently of opposite directions in the interior of the province, and instead of the very strong monsoon current which had previously been blowing at the head of the Bay, a light and rather irregular current was reported, though at the same time an extremely strong monsoon current was blowing in the south of the Bay. Rainfall also to a great extent ceased in Bengal, though in Behar some heavy falls were reported. On the 7th these conditions developed further, winds became northerly at the greater number of stations in the province, pressure remained very high in Bengal and an almost complete break in the rains was established. Conditions over the centre and south of the Bay were probably decidedly disturbed at this time, and wind directions all round the Bay showed distinct indraught towards the sea area, while in the south of the Bay at Galle a particularly strong monsoon current was blowing. These conditions continued unaltered until the 9th, when an extremely rapid fall of pressure set in over the northern half of the Bay, the pressure giving way most rapidly at the eastern stations, and on this day conditions were decidedly favourable to the production of a barometric depression in the eastern part of the Bay. The depression afterwards developed on the 10th, but its history belongs to the meteorology of the following week. The break in the rains in Bengal also continued up till the close of the week, and thus from the 6th to the 9th the falls reported have been light and very local.

Pressure.—The most noticeable feature in the pressure of the week was the extremely rapid rise which took place on the 5th and 6th, the rise in certain districts almost equalling a fifth of an inch. The mean pressure has therefore been very considerably in excess of the normal, and the excess at some stations, such as Purneah and Durbhunga, almost equals a tenth of an inch. The mean excess is less than this, and does not generally exceed 0·06". The excess is smallest in South-East Bengal, in the neighbourhood of which pressure was comparatively low at the end of the week, and at Chittagong it has only equalled 0·024".

Temperature.—Was about normal, or rather above it, during the earlier part of the week, when rainfall was fairly abundant, but directly the break in the rains commenced, temperature commenced to rise with great rapidity, and at the close of the week it was largely in excess of the normal. For the whole week the mean temperature has been considerably in excess of the normal in all districts except Behar and Assam. In East Bengal the average excess has been 2·3°, in South-West Bengal 2·0°, in Orissa 1·5°, and in Chutia Nagpur 1·2°. In North Bengal the excess has been much smaller and only equals 0·2°. In Assam, on the other hand, temperature has been in defect by 0·3°, and in South Behar by 0·7°, while in North Behar the defect has been the considerable amount of 2·5°. For the whole of Bengal the mean temperature for the week has been in excess by 0·6°.

Rainfall.—Has been largely in excess of the normal in North Bengal, moderately above it in North Behar, and slightly above it in South Behar. It has been largely in defect in Chutia Nagpur and South-West Bengal, very largely in defect in East Bengal, while in Orissa the fall has been only about a fifth of the normal. The actual average fall in North Bengal has been the large amount of 6·44 inches, in North Behar it has averaged 3·11 inches, and in South Behar 2·48 inches. The falls in other districts have been very much smaller and in South-West and East Bengal and in Chutia Nagpur the falls have been from one to about one-and-a-half inches, while in Orissa the fall has only averaged 0·65

inch. Compared with the normal fall, and expressed as a percentage of that amount, the average falls in each of the seven meteorological districts for the week have been— in Orissa 23 per cent., in South West Bengal 42 per cent., in East Bengal 31 per cent., in North Bengal 173 per cent., in North Behar 122 per cent., in South Behar 102 per cent., and in Chutia Nagpur 58 per cent. Taking each of these districts as having an equal value in the calculation, the rainfall of the whole province has equalled 78 per cent. of the normal.

The heaviest falls have been mainly determined towards the following districts— Julpigoree, Rungpore and Maldah, and also towards Darjeeling, Sarun and Bogra; while on the other hand the following districts have been very largely in defect :—all the districts in Orissa, the Midnapore, 24-Pergunnahs, Howrah, Hooghly, Burdwan, Bankoora, Nuddea, Jessore and Khoolna districts, in South-West Bengal, all the districts in East Bengal, the Pubna district in North Bengal, and the Chyebassa district in Chutia Nagpur.

In Assam, during the week, particularly heavy rainfall has been reported at Dhubri, which has received 9.34 inches; moderate rain at Silchar, which reports 2.69 inches; and light rain at Sibsaur, which has received only 1.02 inches.

The following table gives the summary of the temperature and rainfall data of each of the eight meteorological divisions of the province for the week ending Friday, the 9th of September 1887 :—

The extreme variation of temperature	15.2
The maximum temperature	98.0
				%
The mean relative humidity	87
				Inch.
The total fall of rain from 4th to 10th September 1887	1.36

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;
The 12th September 1887.

A. PEDLER,
for Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

For the week ending 27th August 1887, the returns from the principal Municipalities in Bengal disclosed the following results:—

1. That the ratios per *mille* of population of births stood at 19· as opposed to very nearly the same proportion, viz. 18·9, during the preceding week ending 20th August, and of deaths at 28·4 against 29·1.

2. That the following Municipalities registered the highest proportions of births and deaths:—

Births.			Deaths.		
		Ratio per mille.			Ratio per mille.
Monghyr	...	40·7	Arrah	...	72·9
Bhagulpore	...	34·4	Monghyr	...	48·8
Serampore	...	33·3	Gya	...	48·5
Durbhanga	...	32·3	Beaulah	...	44·6
Beaulah	...	31·5	Bhagulpore	...	39·8
			Serampore	...	39·3
			Darjiling	...	39·0
			Chupra	...	37·1
			Hurdwan	...	35·1
			Suburbs of Calcutta	...	30·4

3. That the only noticeable point in connection with the incidence of the specific death-causes in comparison with the outcome of the preceding week, is a sensible abatement in the mortality from fever; *vide* subjoined table:—

Ratio per mille during the weeks ending—					
			27th August 1887.	20th August 1887.	
Cholera	4·9	5·5	
Small-pox	·1	·2	
Fever	10·4	11·8	
Bowel-complaints	4·5	3·6	
Injury	·3	·5	
Other causes	8·2	7·5	

4. That while no Municipality suffered much from small-pox or presented a large number of casualties from violence, the following returned conspicuously high death-rates from the rest of the diseases specified in the above table:—

Cholera.		Fever.		Bowel-Complaints.		Other Causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Arrah	...	Beanlah	...	Bhagulpore	...	Gya	...
Chupra	22·5	Purneah	20·8	Puri	10·5	Monghyr	14·5
Monghyr	13·5					Serampore	13·7
Hurdwan	6·1					Bhagulpore	13·6
Gya	4·8					Puri	10·5
Bhagulpore	4·5					Suburbs of Calcutta	10·1
Suburbs of Calcutta	2·7						
Patna	2·3						

5. That the mortality in relation to *Sex*, *Class* and *Age*, stood as follows:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	27·8	Christians	...	26·1	Under 1 year	...	246·9
Females	...	29·1	Hindus	...	29·4	1 and under 5 years	...	52·6
Ratio of male deaths to every 100 female deaths	108		Mahomedans	...	26·5	5 " " 10 "	...	13·9
						10 " " 15 "	...	14·5
						15 " " 20 "	...	18·8
						20 " " 30 "	...	18·6
						30 " " 40 "	...	17·5
						40 " " 50 "	...	22·1
						50 " " 60 "	...	30·0
						60 years and upwards	...	60·7

R. LIDDERDALE, M.D., *Deputy Surgeon-General*,

The 12th September 1887.

Sanitary Commissioner for Bengal.

*General remarks on the fluctuation of principal staples carried over the East Indian Railway
during the month ended 30th July 1887.*

INCREASES.

Coal and coke.—There was an increase in both the upwards and downwards despatches; the upwards increase was due to demands by Foreign Railways, and that in the down traffic is attributable principally to the facilities afforded by the opening of the Jubilee Bridge.

Cotton.—The increase in this staple was due to the shipment demands having improved after the dullness which prevailed in June 1887.

Jute.—This increase is entirely new traffic brought to the mills in the neighbourhood of Howrah over the Jubilee bridge.

Rice (husked and unhusked).—The reasons for the increase in this commodity being as before, good crops near stations on Loop line and high prices ruling up-country.

Other grains.—This increase was chiefly in the despatches from stations in the Allahabad district to Dhulpore, Bharatpore, Agra and Lucknow.

Oil.—The increase is entirely made up of despatches in kerosine oil from Howrah.

Railway Material, Foreign.—This was principally in despatches from Bombay *via* Jabulpore to Manikpore for the Indian Midland Railway, and from Howrah to Benares for the Oudh and Rohilkhand Railway.

Skins.—Due to despatches from up-country stations to Madras.

Sugar, refined and unrefined.—Increases are shown at some of the sugar-despatching stations in the Dinapore district for despatches to up-country stations where the market is favourable.

Government stores.—The increase was principally in the despatches of Government Ordnance stores to Military stations.

DECREASES.

Turmeric.—This falling off can only be ascribed to large stocks up-country and to supplies now going from Bettia *via* the Bengal and North-Western Railway, and from Madras to the North-West.

Grain and Pulses.—This is in continuation of the small despatches reported during the last few months, and was principally in long lead traffic from Delhi, *via* Delhi and Cawnpore.

Gunny.—The falling off was almost entirely at Howrah and followed the decrease in the export traffic in wheat and seeds.

Wheat.—Due to sudden fall in the home markets and to sellers holding out for better rates.

Iron.—This decrease was principally in the despatches from Howrah owing to there being no buyers and the market dull.

Salt.—This decrease was chiefly in the despatches *via* Agra due to diversion of the traffic by the Bombay, Baroda and Central India Railway to Cawnpore.

Seeds.—This decrease is attributable to the home markets being dull.

Tobacco.—This decrease as in the previous month is due principally to poor crops.

ALLEN MEARS, *Dy. Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 6th September 1887.

Weekly Return of Traffic Receipts on Indian Railways.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE BHAGULPORE DIVISION FOR THE YEAR 1886-87.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 15th September 1887.

RESOLUTION.

READ—

The Annual General Report of the Bhagulpore Division for the year 1886-87.

This report is submitted by Mr. N. S. Alexander, who was in charge of the division throughout the year under review.

2. *Annual Tours*.—The Commissioner spent 114 days on tour, during which time he was especially occupied with Sonthal Pergunnahs' affairs. All the District and Sub-divisional Officers were in camp for the prescribed number of days, and in Bhagulpore the Joint-Magistrate also spent 43 days in the interior.

3. *Weather, Crops, and Public Health*.—The rainfall during the year was abnormally heavy in all parts of the Bhagulpore Division, and was on the whole well distributed, as is shown by the generally abundant harvests. In Maldah, the Sonthal Pergunnahs, Monghyr and Purneah, the crops, especially rice, were good, and in Bhagulpore, where the *bhadoi* suffered from flooding, the general results were not much below the average. The year was on the whole a particularly healthy one, and a decrease in mortality is shown by the returns of every district. With the exception of Purneah, where cholera made its appearance at the close

of the rains and continued up to the colder months, the whole division appears to have enjoyed comparative immunity from epidemics of any kind. The local officers are to be congratulated on the result of their efforts to extend vaccination in Monghyr and Purneah, but the excellent results there obtained are unfortunately counterbalanced by a falling off in the number of vaccinations, which is not satisfactorily explained in the other districts of the Division.

4. *Material Condition of the People.*—The mass of the population is agricultural, and their material condition necessarily varies with good and bad seasons. The abundant harvests of the year have restored to the cultivators a measure of prosperity which they had lost in recent unfavourable seasons. Only in the case of the Paharias in the Sonthal Pergunnahs is no improvement reported by the District Officer, and the Lieutenant-Governor would desire to have a special report on the condition of these aborigines, and on any measures which may appear to the local officers to be possible for the amelioration of their present wretched condition. As was to be expected under the circumstances of the year, the price of food fell throughout the division: the fall was particularly marked in the Bhagulpore district, at the sudder station of which rice was cheaper than it had been during the last 10 years. A corresponding tendency to rise in the rate of wages is noticed in Bhagulpore and Maldah, while the returns of registered emigration show a decrease. The remarks made by the Deputy Commissioner of the Sonthal Pergunnahs with regard to abuses in the system of free emigration to the tea districts have been read by the Lieutenant-Governor with attention, but it is observed that no mention is made of specific instances of fraud or kidnapping, or of any other criminal offence. It is important that it should be borne in mind that a policy of non-interference with free emigration to the labour districts has been definitely accepted by Government on the ground that greater evils would be caused by interference with a view to stop possible abuses than are involved in the relatively small number of instances in which abuses occur.

5. *Manufactures and Mines.*—Indigo is manufactured in all the districts of the division, but chiefly in Bhagulpore and Monghyr; this industry is reviving both in Purneah and Maldah. The season was on the whole favourable to this crop, but prices were low. Opium is grown in Monghyr alone, and the area under cultivation expanded slightly, but the outturn, owing to unseasonable rains, compares unfavourably with that of 1885-86. The manufacture of silk fabrics is a declining industry in Bhagulpore and Maldah, but the price of cocoons rose in both districts on account of larger demands for export. The manufacture of *bidri* work in Purneah is reported to be dying out, and the iron industry of South Bhagulpore does not flourish, but the manufacture of muzzle-loading guns in Monghyr has increased. Experiments made in slate quarrying and enamelling have not proved very successful, and exorbitant terms demanded by the zemindars, both in this district and in Bhagulpore, have stood in the way of mining enterprise.

6. *Trade and Commerce.*—The trade of the division was generally brisk during the year on account of the favourable harvests, and the increased export of food-grains, especially of wheat, is noticeable. The import of piece-goods appears to have improved in Monghyr and Maldah, but the Commissioner makes no comment on the report received last year from the Sonthal Pergunnahs to the effect that the bad quality of European piece-goods has made them unpopular and checked their importation, although the advisability of making enquiry was suggested in the Government Resolution. The timber trade with Nepal suffered from an overstocked market, but the demand for Nepal jute was maintained. The subject of registration of trade with Nepal in Purneah, to which attention is drawn in paragraph 68 of the Commissioner's report, will be separately considered. Under the head of development of trade routes, the opening of a station on the Tirhoot State Railway in the north-west corner of the Bhagulpore district, the opening of the Purneah branch of the Assam-Bihar State Railway, and the increased traffic of steamers on the Ganges must be noticed.

7. *Public Feeling and Administrative arrangements.*—The account of the general demonstrations of loyalty called forth by the Queen-Empress's Jubilee is in accord with those contained in the reports of other Commissioners. On

other topics public feeling did not display itself. The introduction of the income tax did not affect the mass of the people, and the Tenancy Act is hardly mentioned by the Commissioner in his report. From the tabular statement given by the Commissioner, showing the employment of Muhammadans in Government service in this division, it appears that 1 in 6 of the gazetted officers is a Muhammadan, and that in superior and inferior service the respective proportions are 1 in 5 and 1 in 3. The Commissioner expresses a decided opinion that in making appointments the best man available, irrespective of creed, is selected, and that the orders of Government are duly observed in filling up vacant appointments.

8. *Police and Crime.*—The results for the year under the head of Police and Crime were not altogether satisfactory. There was a decrease in the number of offences against property, probably connected with the agricultural prosperity of the year, but on the whole both cognizable and non-cognizable crime slightly increased. The percentage of convictions in sessions trials fell as low as 43·9, and there was no improvement in the results of prosecutions for false complaints. The police force of the division appears to be below the average in efficiency. In the rural police improvement is reported.

9. *Civil Justice.*—In civil suits there was an increase under the head of suits for money or moveables, a small decrease in the number of title suits, and a rather large decrease in rent suits. The increase under the first head is attributed to good seasons following bad ones; while the decrease of rent suits is said to be due to the general uncertainty felt regarding the effects of the provisions of the Tenancy Act. In Monghyr, however, the number of applications for deposit of rent was much higher than before. The Collector of Maldah quotes the opinion of the Munsif to the effect that the introduction of the new law has led to the speedier disposal of suits for arrears of rent, enhancement, and the surrender of holdings, and that the enhancement sections have benefited landlords.

The question of the advisability of permanently establishing a Subordinate Judge's court at Monghyr is under the consideration of the Lieutenant-Governor, and the opinion of the High Court thereon has been invited. The question of establishing a Munsif's court at Soopool will be considered in the Judicial Department.

10. *Land Revenue.*—The current demand of land revenue increased from Rs. 33,62,145 to Rs. 33,67,500, and the current collections exceeded those of the preceding year by Rs. 30,557, the percentage of current collections to current demand rising from 96·8 to 97·5. There was an improvement likewise in arrear collections. The registration of estates and the writing up of registers under Act VII (B.C.) of 1876 have been nearly completed in all the districts of the division.

11. *Excise, Stamps and Income Tax.*—The excise revenue rose from Rs. 10,26,244 to Rs. 11,11,267 during the year under report, the increase being shown under all heads—country spirits, tari, ganja, and opium—and being due apparently to the more prosperous circumstances of the people. The gross realizations from stamps also advanced from Rs. 9,74,919 to Rs. 10,50,574, the largest increase, particularly noticeable in Monghyr, being under the head of judicial or court-fee stamps. The total amount realized from the income tax, exclusive of fines and penalties, and the proceeds of the tax on Government salaries and pensions, was Rs. 2,15,098 as against Rs. 1,47,904 collected in the preceding year under the license tax.

12. *Communications.*—The Kosi extension of the Tirhoot State Railway and the opening of the Purneah section of the Assam-Bihar State Railway have been noticed above. A considerable number of useful original works were undertaken by the Road Cess Committees during the year, but the state of existing roads in Monghyr, Bhagulpore and Maldah is unsatisfactory. It would appear that the attention of the new District Committees should be directed rather to up-keep of existing roads than to undertaking new works at the expense of the maintenance of present lines of communication.

13. *Education.*—The percentage of success at the different examinations compares favourably with that reported in the preceding year, but otherwise the educational results of the year 1886-87 are discouraging. There has been a total decrease of 362 schools and of 5,889 pupils, secondary education

showing a loss of one school and a gain of 381 pupils, and primary education a decline of 655 schools and 7,617 pupils; the balance is accounted for by inclusion in the returns of the department of a larger number of indigenous schools. The decrease is due, as in other divisions, to the exclusion of small and inefficient schools from the returns, but the falling off in female education in all districts, except Maldah, which appears to be the result of the exclusion of small schools, is to be regretted. Gratifying progress is being made by Muhammadans, who, although they form only 19·6 per cent. of the whole population of the division, contribute 22·9 per cent. of the total school population. In the Damin-i-Koh the number of Santhali patshalas aided by Government has increased from 99 to 110.

14. *Committees and Local Bodies and Conduct of Zemindars.*—The meetings of Road Cess Committees during the year were not well attended, except in Purneah, and the Lieutenant-Governor has perused with regret the unfavourable remarks contained in the report on the working of Municipal Committees in respect especially of sanitary arrangements. The responsibility devolving on District Officers for the success of such Committees must not be forgotten, and Sir Stuart Bayley relies upon their energy and tact to assist the first developments of Local Self-Government.

The conduct of zemindars in this division is reported to have been generally satisfactory. The most serious difficulties between landlords and tenants exist apparently in North Bhagulpore, where the remedy of a survey and record of rights is to be applied in the two zemindaris of Srinagar and Banaili.

By order of the Lieutenant-Governor of Bengal,

W. C. MACPHERSON,

Offg. Secretary to the Govt. of Bengal.

WOOL TRADE OF BENGAL.

The following is published for general information.

P. NOLAN,

Secretary to the Govt. of Bengal.

No. 2737—497 Agri., dated Calcutta, the 5th September 1887.

From—H. W. C. CARNDUFF, Esq., Offg. Under-Secy. to the Govt. of Bengal,

To—The Director of the Agricultural Department, Bengal.

I AM directed to acknowledge receipt of your letter No. 1194 Agri., dated the 4th August 1887, forwarding copy of an interesting Note on wool prepared by you at the instance of the Government of India, Revenue and Agricultural Department, and to say that Sir Steuart Bayley would be prepared to give his support to a scheme for improving the breed of sheep in Behar, if submitted with your approval.

Note on Wool in Bengal.

THE Government of India having asked me, by demi-official communication, for some information regarding the trade in wool in Bengal, and the possibility of improving the supply or quality of that article, I have made some enquiry on the subject. The information which I have been able to obtain is meagre and vague in its character. Further enquiries will continue to be made, but, pending results of such enquiry, I now give the small amount of information on the subject which I have been able to gather.

First, as regards the supply of wool from Thibet and the Northern Frontier, the following remarks occur in the report of the External Trade of Bengal with Nepaul, Sikkim, and Bhutan, published by the Government of Bengal, 1885 :—

"The quantity of wool available for export from Thibet is believed to be enormous. Between Kamba and Shigatse, within a march and a half of the Sikkim frontier at the head of the Lachen, sheep are killed, not for the sake of their hides or fleece, which are practically valueless for want of a market, but in order that their carcasses may be dried into jerked meat and sold for 8 annas each. At Kamba itself carpets and rugs are manufactured of the finest quality, and of patterns evincing excellent taste and skill; but there is no outlet for these fabrics. Further north on the Great Chang Thang (or northern plateau), which begins just beyond the Sanpo, within five marches of the Kongra Lama, are prodigious flocks and herds which roam at will over the endless expanse. In noticing the improvements in the supplies of wool imported into Bengal from Thibet during 1883-84, it was remarked in the report for that year—'it is believed that this trade has dwindled during the current year (1884-85), partly owing to the difficulties placed in the way by Thibetan officials,' the statistics recorded show that the belief was well founded, for the quantity imported during 1884-85 was only one tenth that imported during 1883-84, viz. 91 maunds against 911 maunds. With the exception of 19 maunds registered at Rungeet in 1883-84, and 5 maunds in 1882-83, the entire supply during the three years was brought through Pheydong. The value of manufactured woollen goods (chiefly blankets) during 1884-85 was Rs. 4,415 in excess of the figures of 1883-84, but Rs. 564 below those of 1882-83. By far the largest supplies are brought *via* Pheydong."

The following statement shows the quantity of wool imported into British territory from Sikkim and Thibet during the past five years :—

	Mds.
1882-83	168
1883-84	911
1884-85	91
1885-86	2,555
1886-87	1,933

The falling off in imports of wool in 1884-85, as compared with the two previous years, has been attributed to the difficulties placed in the way of this trade by Thibetan officials; but though this may be one of the true causes of the decline in question, it is to be noted that the trade appears to have been at all times insignificant and irregular. At the same time that there was a decline in the imports of wool, it is to be observed that there was a very large increase in the imports of other articles—for example, musk and yak tails.

	1883-84.	1884-85.
	Rs.	Rs.
Musk	2,563	84,100
Yak tails	8,924	58,794

margin, largely increased in 1884-85.

2. Without, however, questioning the existence or the pernicious effects of restrictions placed by the Thibetan officials on the frontier trade—matters on which I have no knowledge and no special sources of information—I may say that, having made some enquiry on the subject at Darjeeling, I have not seen or heard anything which would lead me to doubt that a considerable trade in Thibetan wool can be developed even under existing conditions, by

which, however, may be accounted for by the greater facility with which these less bulky articles may be smuggled. The imports of these latter commodities had, as will appear from the figures quoted in the

simply creating a steady demand and securing a steady sale for the article in Darjeeling. It will be seen from a letter from Mr. Spencer Robinson, which is annexed, that a merchant trading with Thibet has recently offered to deliver to that gentleman in Darjeeling ten thousand maunds of wool, provided he guaranteed the purchase of it at Rs. 16 per maund. The Thibetans, he adds, will not place any obstacles in the way of allowing the wool to come through. If the wool, as stated, can be delivered at Darjeeling at Rs. 16 a maund, or, say, three to three and a half pence per pound, and the wool is worth in England 6½ to 7 pence per pound, as it is believed to be, there would appear to be little doubt that the existence of a steady demand at Darjeeling, or some other place nearer the frontier within British territory, would lead to a steady supply so far as the resources of Thibet allow. I am not here arguing against the desirability of removing trade restriction—a question which does not come within my province, and on which I am not called upon to offer an opinion—but what I am arguing in favour of is the creation of a steady demand for Thibetan wool in Darjeeling by establishing an agency, public or private, for the continuous purchase of it. The attempts being made by Mr. Spencer Robinson, who has, I am informed, much practical knowledge of the subject, will, from this point of view, be watched with much interest. It will be seen from the annexed report, with which I have been favoured by the Chamber of Commerce, and from the Secretary of the Agri-Horticultural Society, that Thibetan wool as per sample received from Mr. Spencer Robinson is supposed to be worth 6½ to 7 pence per pound in England, where the price is rapidly rising. If this estimate turn out to be correct, and wool is forthcoming from Thibet in large quantities as stated to Mr. Spencer Robinson, the importation of wool from Thibet should be a highly remunerative business.

3. The following statement shows the exports or imports of wool from and to Calcutta according to the Custom House returns and statistics of river and rail-borne trade in Bengal since 1881-82 :—

<i>Sea-borne trade.</i>				Export.	Import.
Year.				lbs.	lbs.
1881-82	13,446	7,484
1882-83	2,336	41,617
1883-84	32,684	19,613
1884-85	78,395	21,612
1885-86	57,595	86,367

4. As regards the trade in wool produced in the plains of Bengal, there is very little information available in the records of the Bengal Government, and as the Government of India has called for very early report on the subject, I have not been able to ask local officers for further information regarding it. No attempts have ever been made in Bengal to improve the quantity or quality of wool produced in these provinces. The bare suggestion of the possibility of taking measures with this end in view has been made subject of gibes and ridicule. It will, however, be seen from the papers annexed that practical men, who have given attention to the subject, are by no means of opinion that nothing can, or that nothing ought, to be done by Government in this matter. Mr. Abbott, a well-known indigo-planter of Tirhoot, is enthusiastically in favour of endeavouring to improve the breed of Behar sheep by judicious cross-breeding, and is willing himself to undertake the supervision of the experiment on an inexpensive plan, which will be found described in his letter annexed, and Mr. Orrah, Deputy Superintendent of the Bhagulpore Jail, is of the same opinion. I think that Mr. Abbott's plan is an eminently practical one, and that cross-breeding on the lines suggested by him and Mr. Orrah ought to be tried. The Revenue and Agricultural Department of the Government of India may perhaps be in a position to give some assistance and support by supplying merino or other good rams and ewes. I am myself also in communication on the subject with Dr. Greenhill of Calcutta, who has been good enough to volunteer his assistance in the selection and importation of good rams from Australia.

5. I annex some interesting papers with which, through the courtesy of Dr. Lethbridge, I have been favoured by Mr. Orrah.

This gentleman has given much attention to the subject of Indian wool, and probably knows more about it than any official in Bengal. Some of his suggestions for effecting improvements in the quality of Bengal wool, owing no doubt to his want of acquaintance with the actual conditions of Bengal peasant life, are, I think, impracticable; but he agrees with Mr. Abbott in thinking that much may be done by judicious cross-breeding. Mr. Orrah, being in charge of the manufacture of woollen articles in the Bhagulpore Jail, is in a position to offer an opinion of value on the subject, and he bears testimony to the fact that the attempts made to improve the breed of sheep in the North-Western Provinces have led to a marked improvement in the quality of the wool of that province, which he says is decidedly superior to that produced in Bengal. Further, he significantly notes that since the system of cross-breeding sheep by continuous importation of fresh stock has ceased in the North-Western Provinces, the quality of the wool produced is there also deteriorating.

6. I regret that I am unable to furnish the Government of India at present with more accurate and detailed information on this subject, and have only two practical suggestions to make with a view to improvement in the supply and quality of wool from Bengal and the northern frontier.

These are—

1st.—That arrangements may be made by which a steady demand and sale can be guaranteed for Thibetan wool in Darjeeling or elsewhere within British territory—such demand will create the supply, and will probably arise without the aid or interference of Government, when it is known that wool is forthcoming. If, in addition to this, the Government of Thibet can be induced to remove restrictions which must as a matter of course injuriously affect trade, all the better; but I am not in a position to offer an opinion on this point. Further, it would perhaps be at first desirable to allow specially favourable rates for carriage of wool from Darjeeling by rail to Calcutta, and orders to have this done have, I understand, been recently issued. It would also be well, if possible, to improve the means of communication by road with the Thibetan frontier.

2nd.—That as regards wool produced in the plains of Bengal, the suggestions made by Mr. Abbott for cross-breeding in his letter, which is annexed, be accepted as a tentative measure.

M. FINUCANE,

Director of the Agricultural Department, Bengal.

Dated Teendaria, the 17th July 1887.

Demi-official from—SPENCER ROBINSON, Esq.,

To—M. FINUCANE, Esq., C.S.

I FORWARD by Mr. Stevenson two samples of Thibet wool as received from that country.

One is ewe wool, the other ram's wool. I have been selecting wool for a Calcutta merchant during the last week, who is sending it home to England. This is the first shipment of wool sent home. I received a valuation on this wool recently, which was 6½ to 7 pence per pound in England.

The wool trade with Thibet can be developed into a large business, and a merchant trading with Thibet offered to deliver me 10,000 maunds of wool in Darjeeling (provided I would guarantee to buy it) at Rs. 16 per maund. He states the Thibetans will not place any obstacles in the way of allowing the wool to come through the Passes. He is sending me samples of cloth, &c., purchased by the Thibetans, and wishes me to forward them to English manufacturers and let him know the price of such cloth when landed in Calcutta.

Dated Jaintpore, the 27th June 1887.

Demi-official from—H. E. ABBOTT, Esq.,

To—M. FINUCANE, Esq., C.S.

* *

Suffice it then to say, as a commencement of correspondence, that as far as sheep-breeding in Behar is concerned, I live in the very centre of it, and, roughly speaking, my tenants own at least a lakh of these useful little animals; but as far as wool or quality of meat goes they are of the most wretched description, though, like most things indigenous to the country, hardy to a degree. As I told you personally, I am convinced that judicious crossing would prove eminently beneficial (were Australian or British blood imported) to both wool and mutton. I do not think much outside trade is done in the wool line, the shepherds finding a sufficient market at present by weaving it into blankets, which they dispose of locally; but with the railroad now at their doors, the industry only wants encouragement to develop into a very valuable adjunct to the commercial economy of the district. Be it always remembered that the grazing in Behar is for India the best *par excellence*. Sheep during the hot weather are driven to the northern chours, when for a mere nominal sum they fairly well keep themselves; while during the rains practical farming-planters are glad enough to let them have the magnificent grazing of the inevitably heavy undergrowth in their indigo lands, charging the value of one sheep in the hundred for the right. Therefore, Behar is eminently a country suited to sheep farming, and it behoves Government to improve the breed. Give me a dozen rams and double the number of ewes, allow me Rs. 20 a month to keep them up, and I will guarantee to make a present of 90 per cent. of every ram produced in the stock to sheep-farmers in the district, and 50 per cent. of the ewes. Your charge shall be no more than the above Rs. 20 as long as I am in the country, and when I leave, I will give back to Government the same amount of stock that they handed me, or at the end of five years I will ask no further aid from Government, but will return it in kind the amount of rams and ewes advanced me. I will with pleasure furnish statistics of the entire births, deaths and distribution of the stock: of course you will fully understand that, should the stock die, I have no claim whatever against you as far as the Rs. 20 per mensem goes. My mere wish is to show how Government aid, properly applied, can benefit the district at small expense, and be made in the long run almost self-supporting. After a bit, I believe we could make money by letting out the services of the rams. But this must be done gradually. I have already proved that, as far as horses, poultry and dogs are concerned, one can with imported blood and judicious local crossing do very great things in Behar; and as I honestly believe, as far as Bengal is concerned, it could be made the nursery for grain, horses, oilseeds, sheep, cattle, *et hoc genus omne*, for the whole of Southern India.

In such a country as this the encouragement of horses, sheep, and poultry-breeding, of the importation of finer seeds from foreign countries, in fact the entire working up of Behar as a wholesale producer for India, should be the work of the Government at first, and of every Englishman who, like myself, is grateful to it for a happy if an exiled home.

Many experiments have doubtless been made, but forgive me if I say unhesitatingly they have been, as a rule, made on wrong lines. They are generally made through the means of the temporary Collector of the district, without the smallest effort being made to find whether the gentleman in question has a penchant for this kind of thing. The odds are he has not. Witness the attempt to breed mules in Mozufferpur.

Report by Mr. Orrah.

In reply to the Inspector-General of Jails' request, I have the honour to submit the following report upon Bengal wools, together with extracts.

Regarding the production and improvement of wool grown in Bengal, it will be necessary to enter somewhat minutely into the characteristics of wool, namely—

- | | |
|------------------------|----------------------------|
| 1st.—Softness. | 4th.—Uniformity of staple. |
| 2nd.—Elasticity. | 5th.—Fineness. |
| 3rd.—Length of staple. | 6th.—Soundness. |

So far as my experience goes in the working of Bengal wools, I find them wanting in all the aforementioned characteristics.

As regards want of softness and elasticity, I attribute this partly to the hardness of the water the sheep may have to drink, being of a limy character.

The scarcity of yolk in the fibre, which is the natural reservoir from which the wool fibre gains its character for softness, &c., shows the sheep are not sufficiently and suitably fed.

As regards length of staple, uniformity, fineness and soundness, these deficiencies are more the result of want of care and attention to the breeding. Good breeding is undoubtedly the main cause by which sheep of all countries are improved, or for want of it are deteriorated.

Whilst Bengal wools show these deteriorations all round, and contrast very unsatisfactorily with other provinces in the North-West of India, *there is one redeeming feature, which is a very valuable one, possessed by the Bengal sheep, and that is they are very receptive, or in other words susceptible of being improved more rapidly than many other classes of sheep.* The Thibet sheep, for instance, will require much more time to eradicate the coarse hairs and kemps out of the fleece than would the Bengal sheep.

To improve the quality and quantity of Bengal wool, I will mention a few principal methods of treatment necessary for this purpose, for part of which there is some evidence of its having been successful in India as well as other countries.

1st. Pasturage.—I have spoken of the water as being hard: this seems to point out that land pasturage over Bengal is of a calcic or lime character,* and would undoubtedly not only account for hardness of water, but the pasturage thereof must contain in its grasses, herbs and trees and vegetation generally a large proportion of calcium, therefore the food upon which the sheep live and graze must also contain lime, and we see as a natural consequence that the wool they grow is dry, natureless, stunted, and irregular in staple, harsh in feeling, coarse, brittle, inelastic, whilst the yolk of the fibre is scanty and poor.

I would therefore suggest that the water which sheep drink should be tested, and if found to be hard should be treated chemically with a small sprinkling of oxalic acid,† viz. 1 oz. of the salt of this acid to 500 gallons of water, to deposit the lime of waters drunk by the sheep. The washing water for sheep should also have any lime that exists in it deposited before being used.

Quantity and quality of wool, which is distinguished from the fleshy parts of sheep by the large proportion of sulphur which it contains, is very much affected by the soil upon which the food grows: some soils growing poor grasses keep the sheep grazing thereon lean, and whilst giving finest of wool yields only 1½lbs., but a merino fed upon good pasturage, of chemically treated soils, often gives a fleece weighing 10lbs. to 11lbs. It is calculated that 30,000,000 sheep yield on an average 111,000,000lbs. wool, or about 4lbs of wool to the fleece. This quantity of wool contains 5,000,000lbs. of sulphur, which is of course all extracted from the soil.

If we suppose this sulphur to exist in, and to be extracted from, the soil in the form of gypsum, then the plants which the sheep live upon must take out from the soil to produce the wool alone 30,000,000lbs. or 13,000 tons of gypsum. Though the proportion of this gypsum lost by any one sheep farm in a year is comparatively small, yet it is reasonable to believe that by the long growth of wool on land to which nothing is even added, either by art or from natural sources, those grasses must gradually cease to grow in which sulphur most largely abounds, and which therefore form growth of wool—in other words, the

* This is doubtful.

† Impracticable, and if practicable, would be dangerous, oxalic acid being a poison.

produce of wools likely to diminish by lapse of time where sulphur has for centuries been yearly carried off the land: and again the produce is likely to be increased in amount when such land is dressed with gypsum or other manures in which sulphur naturally exists.* This, I believe, could be obtained in a very cheap form from the gas works of the country; some of their waste products containing sulphur in a large degree, such, for instance, as the sulphate of lime, a waste product of these works. There probably also is a natural form of sulphur found in connection with the rock salt districts, as geologically it exists in some form in the same stratification. Iron pyrites also contains sulphur in large proportions. Though not acquainted with all the natural products of India, I am quite sure products could be obtained sufficiently low in rates for manuring purposes. No bones of animals ought to leave India, for its land sadly needs it, being also a valuable manure for sheep farms, in addition to the various dungs of animals of all descriptions.

Breeding.

Next, I would suggest as of first importance also that a definite system of cross-breeding should be sustained with rams obtained from pure blood stock. There is, I believe, some difference of opinion amongst flock-owners as to what countries the best rams are obtainable from; but experience has always proved this fact, that the merino ram, whether of European, South African, or Australian breed, is decidedly the best for crossing with Indian sheep.

As success has been obtained by crossing the merino rams of each one of these aforementioned countries with Indian sheep, the aim of flock-owners should be to obtain wools for clothing purposes of a finer quality. This could be accomplished, and some six different qualities be obtained, which would work in combination or serve the special direct purposes of manufacture in general. With this end in view, I would suggest—

Crosses.

- 1st.—For producing finest fibres of a felty character, a cross of one South African merino ram, pure bred, with 100 Bengal ewes.
- 2nd.—For producing uniformity of lengths of staple, medium fineness, soundness, and elasticity, a cross of an English merino ram, pure bred, with 100 Bengal ewes.
- 3rd.—For medium qualities and characteristics ranging between Nos. 1 and 2, a cross of one Australian merino ram, pure bred, with 100 Bengal ewes.
- 4th.—For improvement from Indian stock rams for coarser wools and cloths, a cross with North-West part-bred merino rams, the result of crossings with European stock in years gone by. This crossing would give wool closely approaching the Agra wool, or wool used largely by Cawnpore and Dhariwal mills, and also exported largely to Europe.
- 5th.—I would advise a trial being made of crossing some Thibet ewes with an English merino ram, pure bred, and the rams obtained from this crossing should then be crossed with Bengal ewes. The effect, I believe, would be that a Bengal wool would be produced, having a character distinctly its own, and a flannel and clothing wool also suitable for hosiery would be produced of an excellent character and high value.
- 6th.—To produce combing wool of very long fine staple, soft in form, in length, soundness, and elasticity of a high value, for European combing machinery, would, I believe, be obtained by crossing Australian fine merino ewes, pure bred, with Thibet rams.

In connection with this matter of breeding are several important factors, such as the ascertaining of defects, pursuing a good system of selection or rejection and sub-division of sheep into classes. These should be done regularly by a yearly inspection, so as to form correct opinion of the nature and properties of the fleece borne by each, in order that the defective sheep may be removed and never again allowed to mix with those drafted and set apart for the production of fine wool.

White-woolled sheep, free from grey or black, should be kept separate.

Black-woolled sheep, free from white or grey, should be kept separate; also the rams of same should be similarly kept separate with their flocks, and not allowed to mix promiscuously. All parti-coloured sheep should be extirpated.

Kemp and hairy wool is very objectionable. Bengal wool is very kempy, that is, full of white hairy coarse bristles or hairs which protrude and will not dye or become amenable to any process or operation of improvement. This, however, is the result of deterioration in all its forms, and can only be eradicated by the carrying out of all such operations as are being suggested herein. If only a few kemps be seen in wool, it lowers its value immensely for clothing purposes. Good feeding, protection and breeding will eradicate these objectionable features. Thus it is that changes in the fleeces of sheep are wrought by propagation or crossing of breeds possessing those qualities which it is wished to acquire.

Lord Western, whose interest in the growth and improvement of wool production years ago, records the effect of a union he made with one of his lordship's own merino tups and some East Indian ewes, on which a striking proof was exhibited of the influence of the male upon the progeny, the latter having a fleece infinitely superior to that of the dams. The ram was kept highly fed, and consequently their fleeces became long in fibre, heavy in weight, the breed of the ram being the merino, which is considered the best from which foreign stock can be improved. Purity of blood should be unquestionable, and the result will then be a stronger stamina capable of standing changes of climate better.

It is, however, impossible, in the brief space of a report like this, to enter more fully into the minute details of sheep husbandry. I subjoin, however, a few extracts obtained from my library, which may be of interest in showing what has been done in the past in the

* Gypsum would no doubt be good manure for pasture land, but *beriswallaks* are not likely to use it.

other presidencies of India, and which I consider somewhat confirms by facts some of the suggestions herein made.

Before concluding I might remark, from my present workings of the North-West of India wools, as compared with Bengal wools, there is so decided a superiority of the North-West wools that I am obliged to use a large proportion to obtain more satisfaction from those who purchase our blankets and cloths, and I have no doubt in my own mind that this same superiority has been given to it by some such early action in the matter of breeding, &c., having been taken by the Government of the North-West of India in the years gone by.

I am also convinced that Bengal could so improve its wools, and if the system of cross-breeding was kept up continuously, might eventually supersede in character the wools of those provinces. I judge also from what I see of the North-West wools, at present there are signs in their wools now that the system of cross-breeding is not being kept up by continuous importations of fresh stock, a very desirable element to sustain and further improve their wools: this I would suggest Bengal should attend to continuously.

ARTHUR ORRAH,

Deputy Supdt., Central Jail, Bhagalpore.

The 15th June 1887.

Extracts.

EARLY efforts to improve the country breed by merino of imported stock.

Early efforts.

The Cape-bred merino rams have been found to answer for this country, India, better than those imported from England, so much so that Government have determined henceforth to import only from the Cape as appear from the memorandum from Mr. Secretary Reid in 1835.

Government attention.

The attention of Government was first directed at the end of 1835 to the improvement of the wool and sheep of Western India. From the information furnished to Government, it appears that many parts of the Deccan and Guzerat are very well adapted to sheep pasture, and that, if the wool of this country, which, though very inferior in kind, finds a ready market, were improved by importing superior sheep so as to improve the fleece of the country breed, the natives would be greatly benefitted. Measures were accordingly adopted by Government to import sheep of a superior breed, and in 1837 a supply of rams and ewes, about 106 in number, of the Southdown merino breed, were sent out at a very heavy expense by the Honourable Court under the care of an experienced English shepherd. About 60 rams and ewes of the Saxon and merino breed were obtained from the Cape of Good Hope, where the breed is very fine.

A large supply of sheep (600) was also obtained through the agency of Colonel Pottonger and Captain Burne from Afghanistan and Cabul, and the pastoral districts in the vicinity of the Indus. A small number of sheep was also brought from Bussorah, as it is well known that the breed in that part of the country yields a very fine lengthy fleece. The sheep obtained from England, the Cape and Cabul, have been distributed about the country, and many of them are entrusted to the care of gentlemen who understand the management of this animal, and take an interest in the undertaking. A sheep farm was established at Ahmednugger, and another at the fort of Jooner, where the climate is good and pasturage plentiful, and these farms were entrusted to Mr. J. Webb of the Civil Service, who had a good practical acquaintance with the management of sheep. The natives in the interior, who breed sheep, are supplied from these farms with half-bred lambs and were allowed to send their ewes to the Government. From the experience gained by these practicalists, it was found that the Cape-bred merino sheep were far superior to those bred in England and better adapted to the Indian climate, the English sheep being too large for the slight made ewes of this country, and are moreover greatly affected by the change in the climate. The Cape sheep are less affected by the climate, and not so subject to disease as those of this country or of England, while their lambs are much stronger than those produced from the English sheep. It was therefore determined not to obtain any more supplies from England.

Of this enterprise on the part of the Government were noted by Sir George Arthur,

Results recorded.

who brought to the subject a valuable fund of information which he had acquired during his previous administration in New South Wales, and thus early declared himself a decided patron and supporter of improvements in Indian wool. When visiting the Government sheep farms of Ahmednugger and Amrut Mahub, he inspected the flocks, and in a minute drawn up on the occasion, remarked that "an improvement in the breed of sheep, as regarded the views of Government, was not an object that at all had reference to profit, but one on which the authorities took the lead, as being the best means of interesting industrious natives in the experiment. Sir George suggested the advantages which would be derived from establishing a more definite system in breeding in the first place by carefully ascertaining the defect on the indigenous race, and this done, by steadily pursuing a good system of rejection and crossing. He at the same time adopted a fresh mode of pasturing and sub-division of the sheep in such a manner that no flock should exceed 700 head, and recommended that, in order to encourage the natives to try the experiment, a given number of the improved sheep should be transferred to the native shepherds under an agreement to provide pasture and attendance, receiving in payment one-third of the produce, and so on.

Again, about a year later, Sir George Arthur having occasion to visit Alleghoom when the Government flock had been collected by a previous arrangement with the Superintendent, again inspected the stock, and in a minute written by himself, and dated 27th September 1843, he expressed himself much pleased with the manifest improvements in the condition of the sheep, which was such as showed the care and attention paid to them by the Superintendent, and the general appearance of the flock being greatly bettered by the removal of parti-coloured sheep, recommending at the same time that no relaxation in this system should be allowed, and urging that it would be proper in the next report from the farm to have the sale price of the wool compared with the ordinary country sheep distinctly noted. Sir George Arthur observed that in order to ensure success it would be necessary annually to import a fresh stock of merino rams till the improved stock had thoroughly superseded the country one on the farm.

Captain Henderson, who acquired much information on the subject as a sheep-farmer at the Cape in 1836, submitted to the Government of Bombay a paper of instruction on the management of merino sheep. In this treatise the Captain states that on rearing these animals the diseases in India most to be guarded against are dysentery and mange. As a precaution against the first, he says that dry pasturage is most essential, and in order to prevent the mange, that great attention should be paid to the cleanliness of the sheep. A Patna ewe crossed with a Southdown ram was tried in Calcutta by a gentleman who had had considerable experience in the growth and cleaning of the staple in the Australian Colonies, and he entered among the proceedings of the Agri-Horticultural Society of India the following result:—The wool is decidedly of a very good quality for the first cross, uniting length of staple and softness with great uniformity of quality throughout the fleece, which is much desirable. The quality from its coarseness will not admit of being used for other than blankets and very coarse cloth. Its market value was in the Home market 16d per pound. He further states that Mr. Rickets, the owner, had acted correctly in having crossed Patna with the Southdown, and should strongly recommend him to carry out the improvement by crossing the production with the merino, as he only requires now the texture, he having procured the length of staple with crosses. India can in my opinion, if sufficient care were displayed in the crosses, produce as good a sample of wool as any of Her Majesty's dominions from the luxuriousness of feed and the temperature of the climate, as texture with length of staple is all that is necessary.

Colonel Hazlewood, in writing to Captain Jacob, of Bombay Artillery, dated Bangalore, 1837, says:—I have just received six more Saxon rams from the ruby flock of Sydney. Mr. Sullivan brought out two merino rams and two ewes, and I have seen the effect of crossing by these and also by Southdown rams imported by Sir William Rumbold on the Neilgherries. Even the red hairy sheep of India become Southdown in size and wool in the second generation, and the white-wooled sheep of India become merino and Southdown in size and wool after one crossing. I have shown Mr. Sullivan's merinos which have been two years in India after twice washing and shearing the day after the ewes gave five or four and a half pounds each; in fineness, length of staple, elasticity and oiliness, equal to any I ever saw in Tasmania, where 2½ lbs. is the utmost ever got from a ewe of the merino kind.

Further report by Mr. Orrah.

SINCE writing my report upon the wools of Bengal, I have received, by mail, a copy of the weekly paper called the Wool and Textile Fabrics, which contains a report made by Mr. F. H. Bowman, D.S.C., F.R.S., &c., an authority in England on technical matters upon Indian wools. I have therefore had a copy of the same written out, which I send to you with this letter.

COLONIAL WOOL

IV.

Copy from the Wool Textile Fabrics Weekly of 14th May 1887.

WE take the following paper on colonial wools (by Mr. F. H. Bowman, D.S.C., F.R.S. &c., President of the Society of Dyers and Colourists) from the "Reports on the Colonial sections of the Colonial and Indian Exhibition," issued under the supervision of the Council of the Society of Arts, and edited by the Secretary to the Society, Mr. H. Trueman Wood, M.A.

The whole of the wools exhibited from India, except one or two incidental specimens were confined to those contained in a case within the Economic Court. In speaking of them as wools, the term is used in its widest sense, so as to include all goat and sheep fibres. The samples were 23 in number, and no reference appears to be made to them specially in the official catalogue. Few of these samples were named specifically, the largest portion being only distinguished by a number or letter without label. In character they covered a wide range of quality from the very coarsest goat's hair down to the finest wool or pure pashmina, which is the undergrowth of the Thibetan shawl-goat, as well as the native Indian wools, of which there are at least eight varieties. These wools are interesting, as they contain almost every variation in the individual fibres, which is to be found in all other races of sheep. Most of the hairs and wools exhibited in this section, however, are of comparatively small interest to European manufacturers, because the export is small and the quality such that they can only be used for the coarsest class of goods, and when worked by machinery

they require to be mixed with other wools. They are, however, of considerable importance in India as forming the staple of the woollen industry in the mountain districts, where the great bulk of the woollen goods are worn. Many of them are singular mixtures of coarse and fine fibres; so much so that those who are only accustomed to the regular wools of cultivated sheep can hardly conceive it possible that many of the samples could be obtained from a single animal. The finest specimen in quality and regularity of fibre, and in all characteristics which are typical of the best wools, can scarcely be surpassed; but by far the largest numbers of samples are defaced by irregularities in the structure and quality of the fibre, which are only to be found in the most neglected sheep in the United Kingdom and the Colonies. To enumerate all the defects which are found in many of these wools, when compared with the highest standards attainable in the Australasian Colonies, would be to mention all the defects to be found in any wool, and indeed many of the samples probably resemble the covering of the primitive sheep, from which all the truly domesticated varieties are originally derived. Without further knowledge in regard to the place of origin, a mere classification of these wools would be of little service, and especially since the wools of India scarcely come within the scope of this report, and will probably receive attention elsewhere.

As already remarked, the wide range over which the growth of the wool extended, and the difference in climate and other conditions to which the sheep in the various colonies were subjected, rendered the present opportunity most valuable in making a comparative examination of the different wools. This survey brought home to the eye most forcibly the very wide range of conditions under which the sheep can be cultivated, and the high state of perfection to which it can attain in almost every part of the world, when due attention is paid to the culture and breed. It seems to indicate that special cases of sheep are more adapted to certain regions of the earth's surface than others, and that in many cases the environment of the sheep tends in the course of generations, under careful management, to produce a special character which becomes permanent, and may be retained as a pure breed. It also shows that certain characteristics of the wool, such as lustre in the long-woolled breeds, can only be retained permanently by the re-introduction of fresh blood from time to time; at any rate, in all the regions which lie nearest to the equator, a certain degree of equality of temperature and atmospheric moisture being necessary for its permanence. Thus it appears to be retained longest in New Zealand and the southern coast of the Australian Continent. The nature of the herbage also affects the quality of the wool in a marked degree, and probably one of the chief reasons why the Australian merinos deteriorate when introduced into the Cape Colony is because the herbage is not fitted for the highest development of the sheep. One very marked lesson of the Exhibition is the fact that all the best wools exhibited show that, whatever tends to improve the character of the sheep in any one direction, re-acts all round in a benefit to all the other characteristics. The same conditions which tend to increase the size of the sheep cause the wool to be better nourished, firmer and more tenacious, without injury to the best qualities of the fibre, provided care is taken in the proper selection and purity of breed in the sheep. The question of difference in the lustre of the wool is an important one, and opens a wide field for investigation. It has been already noticed that the Victorian wools stand foremost in this respect amongst the merinos. When the fibres are examined by a microscope, it appears that, while the fibres are equally fine when compared, say, with those from New South Wales or South Australia, the development of the individual scales on the surface is larger, and they present fewer scales in the linear inch. On the other hand, as the fineness in diameter is maintained in the less lustrous fibres, and the development of the scales is greater in number, and this gives a greater softness and pliability to the individual fibres with a large degree of serration, and therefore a higher felting power. It is for this reason probably that the wools of New South Wales are more adapted for fine clothing trade than the more lustrous Victorian, or the coarser fibre wools of South Australia. The judicious introduction of the best characters of certain classes of sheep into other breeds, as is clearly shown, may induce a permanent improvement of the new breed only under certain conditions, and it seems now beyond a doubt that it will always be necessary for the farmer to discover the special class for which his own climate and surroundings are the most advantageous, if he is to attain the highest perfection in the production of wool. Those who are growers of wool must remember that every year the demand for quality in the raw material is greater, and those only who aim at securing all the best properties which wool can possess will secure the markets of the future.

In several instances "kemps" were found associated with the wool. These kemps are fibres, usually shorter and thicker than the others, in which all traces of wool structure are absent. They are brittle, solid, and ivory like. This is the sure indication of want of trueness in breed, and is most objectionable, as these kempy fibres will neither felt nor take any dye. They cannot be removed from the fleece by any process, except picking them out, and hence they injure the quality of any goods for which the wool may be used. The defect was specially noticed in some of the cross-breeds with the long-woolled sheep, and where it exists the value of the wool is most seriously deteriorated.

Nothing can compensate for the want of condition in the wool when sheep are neglected, and it cannot be too strongly urged that every endeavour should be made to maintain in the bulk the high standard presented in the samples exhibited. Without this care and due attention to classification, the results of good breeding and cultivation may all be lost, and rendered commercially unremunerative.

An endeavour was made in preparing this report by each specimen exhibited in relation to the geographical position in which it was grown, to determine, if possible, whether any general law with regard to characteristic properties could be drawn from this relation, but the differences in the breed of sheep, and in the care and attention bestowed on the wool, rendered any sound deduction impossible, and it therefore appears probable the selection of breed, good pasturage and attention, have far more influence than mere geographical position within the range of the temperate zone.

In conclusion, the author of this report begs to record his high sense of the uniform kindness and courtesy which he experienced from all the officials in charge of the various colonial exhibits, and from the Executive of the Exhibition. This was all the more appreciated, as it involved on their part, from the number of samples and variety of information required, a large amount of labour and time.

Dated Calcutta, the 28th July 1887.

From—S. E. J. CLARKE, Esq., Secretary, Bengal Chamber of Commerce,

To—M. FINUCANE, Esq., C.S.

I HAVE only received your letter of the 21st and 27th instant, the former handing me two samples of ram's wool and ewe's wool from Thibet, of which you wish to know the value in Calcutta. The samples have been examined by the Committee of the Chamber of Commerce, who direct me to send you the enclosed copies of letters written by Messrs. Peel, Jacob and Company of this city, with reference to similar descriptions of wool sent to them from Darjeeling in the beginning of 1884. Such wool, say 30 to 40 maunds, was then valued in Calcutta at Rs. 18 per maund. It was, however, subsequently sold to the Elgin Mills Company of Cawnpore for Rs. 25 per maund.

Through the courtesy of Mr. J. L. Mackay, of Messrs. Mackinnon, Mackenzie and Company, I am able to supplement the information given by Messrs. Peel, Jacob and Company by a London Valuation Report dated 18th May of the current year, on some samples of Thibetan wool sent home by Mr. Mackay's firm. The valuation given is from 6½d. to 7d. per pound at the then current market rates. The *Economist* gives the price, January—June 1884, of unwashed wool at 7d. per pound. The value of wool similar to the samples you have now sent would be probably at that time 5d. to 5½d. per pound. The higher quotation given by Messrs. Buxton, Ronald and Company in May last is owing to the rise in the price of wool which has taken place during the last three years.

Thibetan wool is not well known in this market, so that it is difficult to say what the demand for it would be.

The Committee of the Chamber of Commerce desire me to say that they are of opinion it would be advisable to send the samples to the Elgin Mills Company at Cawnpore, and also to the Egerton Woollen Mills Company, Limited, at Dharwal, Umritsur, from both of which concerns you would be likely to receive valuable and practical reports as to the quality of the wool and its suitability to their requirements. They would probably also be in a position to say what place it would take in the home market.

In conclusion, I am to say that, if you desire it, Mr. Mackay will be happy to send the samples home for valuation in London. An early reply to this suggestion will oblige.

Report on Wool Samples referred to in Mr. Clarke's letter.

WE have two samples of wool from you, and value the first received at 5d. per pound, and that last received at 5½d. per pound. The wool is unwashed and unassorted; it is well grown and is of a sound and healthy character. Such wool would sell in Europe in any quantity. Of similar wool from Bombay, Kurrachee, and Beyrout, we sell 50 million pounds annually. There is always a market for such wool at a price; at present the value of all carpet wools (this is carpet wool) is remarkably low. Please refer to the figures in the enclosed circulars about East India wool, which will govern this wool also. Those figures are for washed wool, assorted into various colours and qualities; and it might be advisable to trace a small lot of the wool you have in view in this manner, and ship it to test this market. At the same time, we would certainly suggest that *five* or *ten* bales should be shipped in the natural state, and then we could report fully, and you would be prepared to act in the event of prices rising. It appears to us that the subject is one of great importance, for it is evident that the wool shown by your samples comes from a country perfectly adapted for the growth of a sound and healthy wool.

In Bombay and Kurrachee it is customary to assort and wash the wool before it is shipped, and this plan commends itself to our buyers. We send you samples of a parcel of Candahar wool which was worth 5½d. per pound in its original state as clipped from the sheep, and we give you the result in the assorted and marked washed state of this wool. We do not, however, know what the wool weighed before it was washed.

lbs.			lbs.		
No. 1.—12,000	1st white value	11d.
" 2.—1,700	2nd " "	7½
" 3.—6,000	Yellow " "	9
" 4.—2,500	" pieces " "	6½
" 5.—1,200	Grey " "	5½

24, Bassinghall Street, London, the 18th May 1887.

From—Messrs. Buxton, Ronald and Company.

To—Messrs. Duncan, Macneill and Company.

With reference to the sample of Thibet wool submitted to us this day for valuation, we beg to say we consider the wool worth from 6½ to 7d. per pound at present market values.

In accordance with your instructions, we have retained a portion of your sample as reference, and now return the remainder herewith.

Calcutta, the 14th January 1884

From—Messrs. Peel, Jacob and Company,

To—The Secy. to the Bengal Chamber of Commerce.

The sample of wool referred to in your letter of 8th instant is to hand, and we will endeavour to send you a valuation for it in a few days.

Our Liverpool correspondents, to whom we sent a sample of your wool, write us as follows:—

“We find the present value is about 5d. for unwashed, and say 9d. per pound if washed. It is recommended to be washed before shipment, and if in addition the colours be assorted, each sort being of course packed separately, higher prices would be obtained. We understand there is usually a good demand for this article.”

These particulars may be interesting to you, even if they do not induce you to send a trial shipment to England.

Calcutta, the 25th January 1884.

From—Messrs. Peel, Jacob and Company,

To—The Secy. to the Bengal Chamber of Commerce.

We much regret we have been unable to send you any report on the last sample of wool sent us, as we have not received any communication so far from the Elgin Mills, Cawnpore, to whom we sent it.

We have now the pleasure to enclose a report on your earlier samples, which we have received from our home correspondents, who have gone to some trouble in the matter, and we have sent you by post the five samples referred to therein. We enclose, for your further information, a Liverpool Wool Circular, details in which may be of interest to you. We would ask your careful consideration of the report, and would recommend you to make a trial shipment as suggested, with the view of commencing a regular business.

Dated Calcutta, the 30th July 1887.

From—The Secretary to the Agri-Horticultural Society of India,

To—The Director of the Agricultural Department, Bengal.

I AM now in a position to reply to your demi-official No. 284 of the 21st instant, regarding two samples of wool from Thibet, ram and ewe.

As mentioned in my previous note on this subject, there is very little trade done in wool in Calcutta, and the dealers in Thibetan wool amount to probably less than half a dozen in number. I have obtained the opinion of two of these traders on the samples. They consider they are good raw wools, but are very dirty, and their value would depend on the washing and cleaning they should receive before being put upon the market. In the present state the wool would be unsaleable here. The final market for wool of good quality is Amritsar, and the price there for staple of the quality of the samples would be from Re. 4 to Re. 5 per seer according to the cleaning to which it has been subjected; it would there meet in competition Australian and European wools which are imported *via* Bombay. Another market would be found at the mills in the North-Western Provinces, but prices are not good there, as best qualities of wool are not sought after.

Of the two samples the ewe's wool is the better; the brown spots in it would, however, probably depreciate its value. From an European point of view the samples would be much improved were the two qualities of wool of which they are each composed separated. The outer wool of the sheep is wiry and harsh as compared to the soft inner fleece which is the more valuable. Should you desire it, I can obtain a more precise valuation from Bombay in a few days.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 17th September 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
Burdwan Divn.	1 Burdwan, Sept. 17, '87	2.64	Weather—hot; dry during latter half of week. Rain wanted for <i>amun</i> rice throughout most of the district, and badly in Cutwa, where price has risen somewhat; elsewhere prices stationary. <i>Aus</i> harvest approaching completion with fair outturn. Cholera decreasing; fever prevalent.
	Culina ...	3.34	
	Cutwa ...	1.42	
	Raneegunge ...	1.24	
	2 Bankoora „ 17, '87	2.41	
Burdwan Divn.	Bishenpur ...	3.00	Weather—seasonable. General rain has done much good to the crops. <i>Aus</i> and <i>kalas dhan</i> ripening; <i>biri kalai</i> flowering; <i>amun</i> rice and sugarcane thriving. Prices continue unaltered. Public health good.
	3 Beerbhoom „ 17, '87	1.90	
Burdwan Divn.	Rampur Haut ...	1.90	Weather—cool, with showers at frequent intervals. The weather is all that can be desired for the young rice which is rapidly approaching maturity. The health of the public continues to give grounds for anxiety in the south-eastern portion of the district, where malarious fever is causing a heavy mortality.
	4 Midnapur „ 17, '87	2.96	
Burdwan Divn.	5 Hooghly „ 17, „	2.02	Weather—variable with occasional showers of rain. Prospects of winter rice good, except in certain parts of the Contai and Ghatal sub-divisions. A very few cases of cholera reported.
	Jehanabad ...	1.80	
	Serampur ...	1.93	
	Howrah „ 17, '87	0.89	
Burdwan Divn.			Weather—cloudy with occasional showers. Winter rice greatly benefited by rain and prospects are now favourable. <i>Aus</i> harvest continues. Public health generally fair.
Burdwan Divn.			Weather—seasonable. <i>Aus</i> and jute are being harvested. Prospects of <i>amun</i> and sugarcane promising.
Central Districts.			
Presidency Divn.	6 24-Pargahs, Sept. 17, '87	2.56	Weather—seasonable; cloudy and hot with occasional showers. Harvesting of <i>aus</i> nearly complete. Jute is being cut. Prospects of sugarcane favourable, but more rain still wanted in places for <i>amun</i> crop. Public health generally good.
	7 Nuddea „ 17, „	2.33	
	Kushtea ...	3.47	
	Meherpur ...	0.34	
	Chudanga ...	1.35	
Presidency Divn.	Ranaghat ...	2.78	Weather—seasonable. <i>Aus</i> crop having been cut, the rise of the rivers has done but little damage. Some <i>amun</i> has, however, been submerged. Outturn of <i>aus</i> good. <i>Amun</i> promises to be fair. Rain of 10th did it good. Jute, sugarcane, <i>til</i> and chillies promise well. <i>Arhar</i> somewhat damaged by flood. Fever prevalent. Flood-level falling.
	8 Khoolna „ 10, '87	3.60	
Presidency Divn.	9 Jessore „ 17, „	2.39	Good showers; weather tolerably cool. Harvesting of <i>aus</i> nearly over. Rain of the week very beneficial to <i>amun</i> . In Magura sub-division some damage caused to <i>malbhoy dhan</i> , which covers a small area, by sudden rise of water. Public health good.
	Jhenidah ...	1.72	
	Magurah ...	1.01	
	Narail ...	1.01	
	Bongong ...	7.2	
Presidency Divn.	10 Moorsheadabad „ 17, '87	2.11	Weather—very hot. Rain at intervals. Harvesting of <i>bhadoi</i> paddy almost over. Prospects of <i>amun</i> good. Sowing of <i>til</i> and <i>kalai</i> commenced. Sugarcane and jute progressing. Public health good.
	Lalbagh ...	3.13	
Rajshahye Divn.	11 Dinagepur „ 16, '87	0.71	Weather—hot and close. Standing crops doing well. About 15 annas of <i>bhadoi</i> and jute harvested. Rice 19 to 25 seers per rupee.
	Thakurgaon ...	0.92	
	12 Rajshahye „ 17, '87	1.74	
	Nattore ...	0.70	
	13 Rangpur „ 17, „	0.25	
Rajshahye Divn.	Nilphamari ...	Nil	Prospects of crops continue fair. Tobacco is being sown. Fever prevalent.
	Gaibanda ...	Nil	
Rajshahye Divn.	14 Bogra „ 17, '87	0.53	Weather—hot. State and prospects of crops satisfactory. Public health fair except that fever is prevalent.
	Sherpur ...	0.22	
Rajshahye Divn.	Nowkhilla ...	1.32	Weather—seasonable. Rivers falling. Public health and prospects of crops good.
	15 Pubna „ 17, '87	4.32	
Rajshahye Divn.	Serajgunge ...	0.44	Weather—fine and hot. State and prospects of crops good.
	16 Darjeeling „ 17, '87	0.44	
Rajshahye Divn.	Julpigoree „ 17, „	0.61	Weather—sultry. Harvesting of <i>bhadoi</i> and jute continues. Prospects of winter crops good, but more rain wanted. Common rice 19 seers per rupee. Cattle-disease increasing in Mynagoree thana. Public health good.
Eastern Districts.			
Dacca Division.	18 Dacca, Sept. 17, '87	1.11	Weather—hot with occasional showers. Harvesting of jute still continues; outturn good. <i>Arani</i> paddy thriving. Prospects of crops and public health good. Rivers rising.
	Manickgunge ...	0.67	
	Munshigunge ...	0.22	
	Narsingunge ...	1.47	
	19 Furroedpur „ 17, '87	2.00	
Dacca Division.	Goalundo ...	Nil	Weather—seasonable. Occasionally stormy. Prospects of crops continue favourable. Public health generally good.
	Madaripur ...	1.59	
Dacca Division.	20 Backergunge „ 15, '87	2.83	Weather—seasonable. Cultivation of <i>amun</i> still going on. Prospects of crops good. More rain wanted. General health good.
Dacca Division.	21 Mymensingh „ 16, '87	3.59	Weather—very hot. 3.21 inches of rain on 15th. Prospects of crops continue favourable.
	Jamalpur ...	0.15	
	Kishoregunge ...	0.09	
	Atta ...	0.76	
	Netrokona ...	1.50	

No	District and date of return	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
Eastern Districts—contd.			
CHITTAGONG DIV.	22 Chittagong, Sept. 20, '87	1.94	Weather—seasonable. <i>Amra</i> thriving. Cholera reported; public health otherwise good. Prices stationary.
	23 Noakholly „ 16 „	2.42	Weather—generally sultry; latterly seasonable. Transplantation of <i>amra</i> all but completed. Prospects fair. A few heavy showers at intervals will be very welcome. The Sub-divisional Officer writes “prospects so far good.”
	24 Tipperah „ 15 „	0.68	Weather—not quite seasonable, because not enough rain. Rain is much wanted and a great deal of it. Paddy fields on comparatively high land are cracking, and the paddy turning yellow. In many fields of this sort transplantation is not feasible. Unless heavy rain falls soon the outlook will be very bad.
	25 Chittagong Hill Tracts „ 13 „	1.24	Weather—sunshiny and excessively hot at noon. Occasional fall of rain throughout the week. Harvesting of jum paddy commenced. Cotton doing well. Transplanting of paddy in low land nearly over.
	Hill Tipperah „ 14 „	0.85	Weather—hot; rain much wanted. <i>Amra</i> paddy still being transplanted. Sugar-cane and jum crops doing well. Public health good.
BEHAR.			
PATNA DIV.	26 Patna Sept. 17, '87	0.16	Weather—hot with occasional showers. Reaping of <i>bhadoi</i> crops still going on. Rice transplantation nearly over. More rain required for a good crop of rice. Cholera still reported in Behar and a few cases in Dinapur; public health otherwise good.
	27 Gya „ 17 „	0.59	Weather—cloudy. <i>Bhadoi</i> being harvested. Paddy suffering for want of rain. Cholera reported from some quarters. Fever also reported.
	28 Shahabad „ 17 „	0.68	Weather—hot, but occasionally cloudy. Paddy transplantation finished. <i>Bhadoi</i> crops being harvested. Prospects hopeful. Public health generally good. Prices stationary.
	29 Durbhunga „ 17 „	0.71	Weather—sultry and occasionally cloudy. <i>Bhadoi</i> harvest still in progress. Prospects of rice very promising. Transplantation of tobacco commenced. Price of common rice averages 19 seers per rupee. Public health generally good.
	30 Mozufferpur „ 17 „	0.48	Weather—very variable, but little rain has fallen, and more wanted. <i>Bhadoi</i> crops are being harvested. Prospects of all crops excellent. Sporadic cholera exists.
PRESIDENCY DIV.	31 Saran „ 17 „	0.08	Weather—days hot, mornings cool. Prospects of crops continue favourable. Cholera abating; otherwise public health fair.
	32 Chumpanun „ 17 „	0.23	Weather—cloudy with easterly wind. Prospects of <i>bhadoi</i> good. Harvesting of <i>makai</i> commenced. <i>Aghani</i> crops look promising. Prices stationary. Public health good.
	33 Monghyr „ 17 „	0.62	Weather—hot and sultry. Prospects of winter rice continue promising, but more rain wanted. Harvesting of <i>bhadoi</i> crops nearly completed. Some cholera still reported from thanas Tegra and Khuruckpur.
	34 Bhagulpur „ 17 „	0.84	Weather—bright and sultry till 15th. State of all crops good, and prospects, now the rain has begun again, are very favourable. <i>Bhadoi</i> harvest in north continues.
	35 Purneah „ 17 „	0.90	Weather—hot; latterly heavy showers with high wind. All crops promise well.
ORISSA DIV.	36 Maldah „ 17 „	1.32	Weather—seasonable. <i>Bhadoi</i> harvest still going on in some places. Winter rice doing well. <i>Kalai</i> is being sown on the <i>dearaks</i> . Common rice 21 seers per rupee. Fever rather prevalent.
	37 Sonthal Pergah „ 17 „	1.62	Partial heavy rain. Weather growing cooler. State and prospects of crops fair. Slight damage done by Ganges floods. Fever in the flooded tracts.
	38 Cuttack „ „	Report not received.
	39 Pooree „ 15 „	2.22	Weather—cloudy and rainy. Prospects of <i>sarad</i> rice crop in Chilka tracts bad; in other places weeding in progress and prospects fair. Common rice 23 seers per rupee in Sudder sub-division and 20 seers 4 chittacks in Khooria sub-division. Public health good.
	40 Balasore „ 16 „	3.36	Weather—seasonable. Weeding of <i>sarad</i> crop advancing. Reaping of <i>biati</i> paddy commenced. Prospects of crops good. Rain has fallen in parts of Balasore and Chandbally thanas, where it was wanted. Public health generally good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Sept. 16, '87	0.63	Weather—occasionally cloudy. Prospects generally good, but rain still wanted in parts. <i>Bhadoi</i> being harvested; outturn below the average. A few cases of cholera reported; otherwise general health good. Cattle-disease in some villages.
42	Lohardugga „ 17 „	4.26	Weather—seasonable. Rain throughout the week. Prospects of crops favourable. Price of rice fluctuating and has a tendency to rise. Cholera still continues.
43	Singbhoom „ 16 „	1.85	Weather—cloudy and cool. More rain required to secure crops. Prospects improving. Rain all over district except Khursawan and Seraikela. <i>Gora</i> <i>dhau</i> being reaped, and uplands being ploughed. General health good.
44	Manbhoom „ 17 „	4.08	Good rain during the week; weather hot and steamy. The rain has done much good, and the prospects of the crops are now excellent.

Published for general information.

Summary.—The normal means of air pressure and temperature are given in the margin of the atmosphere.

Notes.—Summary.—The normal means of air pressure and temperature are the arithmetical averages of means of the preceding decade. The humidity of the atmosphere is expressed as percentage, saturated air being presumed to be 100 per cent. The normal means or averages of the minimum and maximum temperatures are also given.

for the week ending Friday, the 16th September 1887.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the return wanting, the corresponding space in the total rainfall columns are left blank.

CALCUTTA, the 16th September 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
16TH OF SEPTEMBER 1887.**

On September, the 9th, or the last day of the previous week, an extremely rapid fall of pressure set in over the northern half of the Bay, the pressure giving way most rapidly at the eastern stations, and thus forming an area of relatively low pressure over the north-eastern part of the Bay. On the 10th a further very rapid fall of pressure took place over the northern half of the Bay, and at some of the stations in South Bengal the fall equalled about 0·15 inch. A distinct barometric depression was therefore formed, the centre of which was apparently not very far south of the Sunderbans, and on the 10th the centre of the wind circulation accompanying it was to the south or south-west of Burrisal. The depression then travelled in a westerly direction, and on the 11th the centre of the feeble storm was about midway between Saugor Island and Faise Point, and it was again accompanied by a distinct cyclonic circulation of winds, though the wind velocities in connection with it were light. On the morning of the 12th the depression had passed well inland, and had disappeared into the Central Provinces, and in South Bengal pressure rose very rapidly, while the area of lowest pressure in the Bay retreated to South Orissa. Pressure continued to rise on the 13th, but the general conditions were unaltered, and the depression had quite ceased to affect the weather in the Province of Bengal. During the formation and advance of the feeble storm, moderate to heavy rain was brought to the southern districts, and in some cases the falls were very heavy: thus on the 10th, Bongoug received 5·05 inches, Culna 3·08 inches, Khoolna 2·94 inches, Ranaghat 2·35 inches, Kandi 2·22 inches, and Tumlook 2·40 inches. On the 11th rainfall was again very general in the southern districts, and many stations received falls exceeding an inch, but on the 12th rainfall became rather less general and rather lighter.

The storm having disappeared inland, it then became possible for the monsoon winds to flow over the Province. Moderate rain commenced to fall in many districts, but it was neither very general nor heavy. A rather strong south-easterly current set in over the whole of Bengal from about the 13th, though, at the same time, a strong westerly current was blowing across the south of the Bay from the Arabian Sea. This seems to have deflected the area of heavy rainfall from the Bengal current towards the east coast of the Bay, and on the 14th Diamond Island reported the excessive rainfall of 9·58 inches. On the 15th a rapid fall of the barometer took place in the north-west angle of the Bay, resulting in the formation of another very feeble depression, the centre of which was near Balasore, and which was accompanied with cyclonic circulation of winds, and the result was that heavy rainfall was brought on this day to parts of South-West Bengal and Orissa, and thus Pooree reported 3·18 inches, False Point 4·46 inches, Dharmasallah 4·02 inches, Garbetta 2·18 inches, and Anda (Bankoora district) 2·70 inches. On the 16th the depression had entirely passed inland, and a steady monsoon current from the Bay of Bengal flowed over the whole Province, and on the 14th and 15th moderate rainfall was general over almost the whole Province.

It will thus be seen that conditions have been rather favourable for rainfall in all districts, except North Bengal and Behar, and the presence and movement of the two depressions have brought good rain to Orissa, South-West Bengal, and Chutia Nagpur.

Pressure.—The variations of pressure over the Province during the week have been large. At the commencement pressure generally fell rapidly in connection with the formation of the depression, but with its disappearance pressure rose rapidly till the 14th, when a fall again occurred, which was succeeded on the 15th and 16th by a further rise; but even at the close of the week pressure was still below the normal over the whole Province, the defect being as large as a tenth of an inch in Chutia Nagpur. The mean pressure for the whole week has therefore been considerably in defect of the normal, the defects varying from 0·103 inch at Gopalpur and 0·132 inch at False Point to 0·071 inch at Purneah. Taking only those stations into consideration, from which records have been received for a number of years, and which therefore furnish reliable averages, the mean pressure for the week for the whole Province has been in defect of the normal by 0·107 inch. In Assam also pressure has been in defect of the normal by nearly a tenth of an inch at each of the three stations, and the mean defect has been 0·101 inch.

Temperature.—Owing to the defective rainfall in North Bengal and Behar, temperature has been about 2° above the normal in these districts, while in the other districts of Bengal the variations from the normal have been small, though temperature has been generally rather higher than usual. For the whole week the mean temperature of the Province has been 1·2° above the normal. In Assam also temperature has been rather largely above the normal, and the excess has averaged 3°.

Rainfall.—It has already been stated that conditions were rather favourable for rainfall in Orissa, South-West and East Bengal, and in Chutia Nagpur, and unfavourable elsewhere. Orissa has received an average of about four inches of rain, South-West Bengal and East Bengal about three inches, and Chutia Nagpur about two and a half inches, and in each district rain has fallen on an average of four or five days during the week. In North Bengal and South Behar the rainfall has averaged little more than an inch, while in North Behar it has been less than half an inch, though even these districts have received rain on two or three days

in the week. Compared with the normal fall for the period, and expressed as a percentage of that amount, the actual district average falls for the past week have been—Orissa 142 per cent., South-West Bengal 144 per cent., East Bengal 128 per cent., North Bengal 86 per cent. North Behar only 20 per cent., South Behar 63 per cent., and Chutia Nagpur 112 per cent. Taking all these large divisions as having an equal value in the calculation, the average rainfall of the whole Province for the week may be said to have been 92 per cent. of the normal. The following districts have received very heavy falls during the week :—Pooree, Midnapore, 24-Pergunnahs, Howrah, Hooghly, Burdwan, Berhampore, Krishnagore, Jessore and Burrisal; while the following are very largely in defect :—Bogra, Rajshahye, Maldah, Dinagore, Rungpore, Julpigoree, Darjeeling, Purneah, Durbhunga, Chumparun, Gya, Patna and Sarun.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 16th of September 1887 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The average fall of the corresponding period for 24 years, S. G.'s Office	54.54

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, d dew.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA ;
Calcutta, the 19th September 1887.

MEMORANDUM.

THE mortuary returns of the districts in Bengal for the month of July 1887 disclose the following results:—

1. That the deaths of 137,112 persons were registered in these districts among their population of 66,163,884, representing an annual death-rate of 24·84 per 1,000 against 20·40 per 1,000 during the preceding month, and 16·92 per 1,000 during the corresponding month of the preceding year, indicating, as compared with both the periods, a very considerable advance in the registration of the events.

2. That the highest casualty rates were returned from the following districts:—

Districts.	Ratio per mille.	Districts.	Ratio per mille.
Shahabad ...	72·00	Darjiling ...	33·72
Gya ...	63·80	Hazaribagh ...	33·36
Puri ...	58·08	Bhagulpore ...	28·66
Patna ...	51·00	Chumparun ...	26·76
Lohardugga ...	42·72	Jalpaiguri ...	26·40
Monghyr ...	40·32	Balasore ...	26·04
Sarun ...	38·40		

3. That the mortality from the specific death-causes specified in the table appended to this memorandum, as contrasted with the outcome of the corresponding month of the preceding year, stood as follows:—

				Ratio per mille during—	
				July 1887.	July 1886.
Cholera	5·52	·72
Small-pox	·07	·04
Fever	14·52	12·12
Bowel-complaints	·81	·60
Injury	·72	·72
Other causes	2·88	2·28

indicating a marked increase of mortality from cholera and fever, particularly those from the former, no noticeable differences from the rest of the diseases, the casualties from injury remaining stationary.

4. That while no district presented noticeably high mortality from small-pox and injury, Darjiling suffered pre-eminently from bowel-complaints; Puri from the maladies classed under the head of "other causes" (the former disease furnishing a death-rate of 10·32, and the latter, of 11·52 per 1,000 of population), and the following districts from cholera and fever at the rates noted opposite them.

Cholera.		Fever.	
	Ratio per mille.		Ratio per mille.
Puri	40·08	Shahabad ...	29·16
Shahabad	37·44	Gya ...	25·80
Gya	29·88	Monghyr ...	25·56
Lohardugga	20·64	Lohardugga ...	25·20
Patna	14·52	Patna ...	24·24
Sarun	14·04	Jalpaiguri ...	23·40
Balasore	9·36	Dinajpur ...	22·08
Monghyr	7·80	Rajshahye ...	21·72
Cuttack ...	6·72	Bhagulpore ...	21·60
Chumparun	6·24	Rungpore ...	20·40
Durbhanga	6·00		
Mozufferpore	5·40		
Hazaribagh	2·28		
Midnapore	2·16		

It will be seen from the foregoing table that Puri, Shahabad, Gya and Lohardugga suffered notably from cholera, and the same districts, excluding Puri and including Monghyr, from fever.

5. That under the heads of *Sex*, *Class* and *Age*, the mortality of the month was distributed as follows:—

According to Sex.			According to Class.			According to Age.		
	Ratio per mille.			Ratio per mille.			Ratio per mille.	
Males ...	27·00	Christians	12·96	Under 1 year	...	148·08	
Females ...	22·68	Hindus	27·48	1 and under 5 years...	...	35·76	
Ratio of male deaths to every 100 female deaths ...	117	Mahomedans	19·68	5 " " 10 "	16·20	
		Budhists	17·04	10 " " 15 "	12·96	
		Other classes	27·60	15 " " 20 "	16·20	
					20 " " 30 "	16·56	
					30 " " 40 "	18·12	
					40 " " 50 "	22·56	
					50 " " 60 "	30·60	
					60 years and upwards	45·00	

R. LIDDERDALE, M.D., Deputy Surgeon-General,

The 16th September 1887.

Sanitary Commissioner for Bengal.

Statement showing the Results of the Registration of Deaths in the Districts in Bengali for

[illegible]

MEMORANDUM.

THE returns from the principal Municipalities in Bengal presented, during the week ending 3rd September 1887, the following results :—

1. That births and deaths were recorded in these Municipalities at the rates respectively of 17·1 and 25·1 per 1,000 of population, as opposed to 19· and 28·4 per 1,000 in the preceding week ending 27th August, indicating a large reduction in the registration of both the events.

2. That these events were returned in the highest proportions from the following Municipalities :—

<i>Births.</i>			<i>Deaths.</i>		
		Ratio per mille.			Ratio per mille.
Monghyr	...	41·6	Gya	...	54·6
Bhagulpore	...	37·1	Arrah	...	45·5
Gya	...	35·5	Puri	...	42·0
Durbhanga	...	33·8	Suburbs of Calcutta	...	36·2
			Bhagulpore	...	35·3
			Monghyr	...	32·5
			Ranaghat	...	29·9
			Serampore	...	29·4

3. That, in comparison with the results of the preceding week, there was a considerable reduction in the death-rate from cholera; no variations in fatality from small-pox and injury; and only small differences in the casualty-rates from the rest of the death-causes :—

			Ratio per mille during the weeks ending—	
			3rd September 1887.	27th August 1887.
Cholera	2·6	4·9
Small-pox	·1	·1
Fever	9·7	10·4
Bowel-complaints	4·8	4·5
Injury	·3	·3
Other causes	7·6	8·2

4. That the Municipalities named below appear to have suffered the most from the diseases indicated in the foregoing table, excepting small-pox and injury, the casualties from which were nowhere above normal :—

<i>Cholera.</i>		<i>Fever.</i>		<i>Bowel-Complaints.</i>		<i>Other Causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.

Friday (6 p.m.), the 23rd of September 1887	1724	to 24th September 1887	1730
		Weekly Return of Traffic Receipts on Indian Railways ...	ib.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 24th September 1887.

No.	District and date of return.	Rainfall at Sudder station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIVN.	1 Burdwan, Sept. 24, '87	2.54	Weather—seasonable. Crop prospects improved by rain during week, but more wanted in some tracts, especially in Cutwa. Prices easier. Cholera abated. Fever prevalent.
	Cutwa	1.26	
	Cutwa	0.35	
	2 Bankoora „ 24, '87	1.75	Weather—seasonable. <i>Amu</i> being harvested. Standing crops doing well. Prices stationary. Public health good.
	Raneegunge	0.44	
	Bishenpur	2.58	
3 Beerbhoom „ 25, '87	2.65	Weather—cool and showery. More rain needed for paddy, which is, however, a very promising crop. Sugarcane coming up well. Prices falling and markets very dull. Cattle-disease reported from north of district. A good deal of fever everywhere.	
Rampur Haut	1.46		
4 Midnapur „ 24, '87	0.55	Thickly clouded, with occasional foul weather. The prospects of the rice crop are generally good, the only exceptions being certain parts of Ghattal and Contai sub-divisions, which have suffered from floods. Public health is good, but there are reported a few cases of cholera and malarious fever.	
5 Hooghly „ 24, „	0.71	Weather—cloudy and rainy. The rain has been seasonable and sufficient. No further damage to the crops is apprehended.	
Serampur	1.05		
Howrah „ 24, '87	2.49	Weather—hot and sultry, with slight showers of rain. Harvesting of jute and <i>amu</i> proceeding. Prospects of <i>amu</i> and sugarcane continue good.	
Central Districts.			
PRESIDENCY DIVN.	6 24-Perghs., Sept. 24, '87	4.78	Weather—unsettled; cloudy and hot with occasional showers. Harvesting of <i>amu</i> nearly complete. Rain has done much good to <i>amu</i> . Prospects of jute and sugarcane good. Public health generally good, but a few cases of cholera and fever reported from Buxirhat and Sudder sub-divisions.
	7 Nuddea „ 24, „	4.40	Weather—seasonable. Prospects generally good. Rain of the week has benefited <i>amu</i> crop. Prospects of jute and sugarcane favourable. <i>Til</i> , chillief and <i>arkar</i> very slightly damaged by flood. River very much lower. Fever prevalent.
	Kushtea	0.71	
	Meherpur	1.58	
	Chaudanga	1.60	Weather—hot with occasional heavy showers. Late rice has benefited much from late rain. Prospects good. Public health good.
	Ranaghat	3.97	
	8 Khoolna „ 24, '87	0.90	Week's rainfall has been good and weather tolerably cool. Harvesting of <i>amu</i> paddy nearly finished. Prospects of <i>amu</i> crop excellent in Magurah and good in other sub-divisions. Public health good.
	9 Jessore „ 24, „	2.79	
	Jhenidah	0.86	
	Magurah	Nil	Weather—seasonable: rain at intervals. Prospect of <i>amu</i> good. Sowing of <i>til</i> and <i>kalai</i> commenced. Sugarcane and jute progressing. Public health good. Fever prevails in Lalbagh sub-division.
10 Moorshedabad „ 24, '87	3.77		
Lalbagh	2.53		
Jungipore	1.56	Weather—hot and close. Standing crops doing well. Prospects of <i>hoimanti</i> paddy fair. Harvesting of jute nearly finished. Rice 13 to 26 seers per rupee.	
11 Dinagepur „ 24, '87	1.68		
Thakurgaon	3.36	Weather—cloudy and showery. Prospects of <i>amu</i> paddy and other crops generally good. Public health fair.	
12 Rajshahye „ 24, '87	1.28		
Nattore	1.80	Weather—seasonable. Prospects of crops good. Jute being harvested. Fever prevailing at head-quarters.	
Nowgong	2.88		
13 Rungpur „ 24, „	2.91	Weather—hot, but cloudy. Rain wanted for <i>amu</i> crop throughout the district. Transplantation going on. Harvesting of <i>amu</i> and jute-steeping in progress.	
Gaibanda	0.88		
Kurigram	1.26	Weather—seasonable. Rivers falling. Public health and prospect of crops good.	
14 Bogra „ 24, '87	1.50		
Sherpur	1.94	Weather—hot. State and prospects of crops good.	
Nowkhilla	1.80		
15 Pubna „ 24, '87	0.46	Weather—seasonable. Prospects of crops good. Jute rather bad. More rain wanted. Cattle-disease prevails in Mynagori. Public health good.	
Serajgunge	5.01		
16 Darjeeling „ 24, '87	1.71		
Julpigoree	0.87		
Eastern Districts.			
DACCA DIVISION.	18 Dacca, Sept. 24, '87	0.64	Weather—hot. Harvesting of jute still continues. Prospects of crops good. Rivers gradually falling. Public health generally good.
	19 Furreedpur „ 24, '87	0.64	Weather—cloudy with occasional light showers. <i>Amu</i> promises well. Outturn of <i>amu</i> good. General health good.
	Goalundo	0.35	
	Madaripur	1.92	Weather—seasonable but rain somewhat scanty. Transplantation of <i>amu</i> paddy not yet finished. Prospect of crops favourable. General health good.
	20 Backergunge „ 23, '87	3.37	
	21 Mymensingh „ 23, '87	1.76	Rain on six days of the week; heavy on the 20th. Weather stormy. Prospect of crops good.
	Jamalpur	1.85	
	Kishoregunge	1.27	
	Attea	0.61	
	Netrokona	0.67	

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIV.	22 Chittagong, Sept. 27, '87	1.08	Weather—seasonable. Prospects of <i>amun</i> and sugarcane good. Cholera reported; public health otherwise good. Prices stationary. Report not received.
	23 Noakhally	
	24 Tipperah " 22 "	0.84	Weather—hot. <i>Amun</i> paddy on high lands has begun to be affected. Heavy rain is wanted to better the prospects, which up to now are fair.
	Brahmanbariah	0.94	
	Chandpur " 20 "	0.63	Weather—sunshiny and excessively hot at noon. Occasional fall of rain during the week. Harvesting of <i>jum</i> paddy continues. Cotton doing well. Transplantation of paddy on low lands now over. Public health good.
	Chittagong Hill Tracts.	0.96	
	25 Hill Tipperah " 21 "	0.60	Weather—seasonable. Transplantation of <i>amun</i> paddy is being stopped. Sugarcane and <i>jum</i> crops doing well. Public health good.
BEHAR.			
PATNA DIV.	26 Patna Sept. 24, '87	1.73	Weather—hot and clear. Reaping of <i>bhadoi</i> crops completed. Paddy growing well. Sowing of castor continues. Cholera still reported in Behar; otherwise public health good.
	Barh	2.40	
	27 "y. " 24 "	7.03	Weather—fair. <i>Bhadoi</i> reaped. Paddy good. Cholera and fever reported from almost all parts of district.
	28 Shahabad " 24 "	1.77	Weather—bright and clear. Harvesting of <i>bhadoi</i> approaching to a close. Rice doing well, but a little more rain wanted. Prospects continue promising. Public health good. Prices stationary.
	29 Durbhunga " 24 "	1.13	Weather—seasonable. Harvesting of <i>bhadoi</i> crops nearly completed. Prospects of rice continue favourable. Transplantation of tobacco seedlings in progress.
PRESIDENCY DIV.	Madhubani	1.70	Price of common rice averages 19 seers per rupee. Public health generally good.
	Tajpur	2.55	
	30 Mozufferpur " 24 "	1.47	Weather very variable. Little rain has fallen during the week and more wanted. <i>Bhadoi</i> crops are being harvested. Prospects of all crops excellent.
	31 Saran " 24 "	0.81	Weather—days hot, mornings cool. Prospects of crops continue good, but rain much wanted for <i>aghani</i> rice. Cholera abating; otherwise public health good.
	Sewan	2.09	
	Gopalgunge	0.26	
	32 Champaran " 21 "	3.91	Weather—hot with westerly wind. Prospects of <i>bhadoi</i> crops good. Harvesting of <i>makai</i> in progress. <i>Aghani</i> looks promising, but more rain wanted. Public health fair. Prices remain stationary.
	Bettwa	0.48	
PRESIDENCY DIV.	33 Monguvt. Sept. 21, '87	2.73	Weather—hot and sultry in the first part of the week, a little cool in the latter part with westerly wind. Prospects of winter rice continue favourable.
	Begusarai	3.46	<i>Bhadoi</i> crops have been harvested with favourable outturn. A little cholera in the Sudder sub-division; otherwise public health good.
	Jamui	2.68	
	34 Huzulpur " 24 "	0.75	Weather—warm with little cloud and westerly breeze. Harvesting of early rice and <i>munra</i> closing with good outturn. Late rice doing well.
	35 Patna " 24 "	0.79	Weather—rather hot for the time of year. <i>Aghani</i> promising well. <i>Bhadoi</i> and <i>jute</i> being harvested. Public health very bad.
	36 Malda " 24 "	0.73	Weather—seasonable. <i>Bhadoi</i> harvest still going on in some places. Winter paddy very promising. <i>Kalai</i> thriving. Common rice selling at 22 seers per rupee. Fever very prevalent.
	Chanchal	1.07	
	Sibganje	1.27	
	Gajole	0.1	
	37 Southal Pergas. " 24 "	3.51	Stormy, ending with cool fair weather and north winds. Indian-corn harvest ended with good outturn. More rain wanted in Deoghur. <i>Sergoeja</i> and <i>kuorti</i> sowing begun. Fever in Rajmehal.
ORISSA.	Deoghur	1.53	
	Jamtara	1.64	
	Godda	0.36	
	Rajmehal	1.12	
	Pakour	5.61	
ORISSA DIV.	38 Cuttack " 23 "	3.40	Weather—cloudy and rainy at times. Reaping of <i>beali</i> rice still continues. <i>Sarad</i> rice growing well. Ordinary fever prevails. Cases of cholera still reported; otherwise public health good. Prices of rice unchanged.
	39 Pooree " 22 "	4.86	Weather—cloudy and rainy. Prospect of <i>sarad</i> crop on the Chilka tracts bad. Weeding in progress. Common rice 23 seers 10 chittacks per rupee in Sudder sub-division and 20 seers 6 chittacks per rupee in Khoorda sub-division. Public health good.
	40 Balasore " 23, "	0.60	Weather—cloudy and seasonable. Weeding of <i>sarad</i> crop advancing. <i>Beali</i> paddy being reaped. Prospects of crops generally good. Public health good except a few cases of cholera in Chandbally and Bhadruck.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, Sept. 23, '87	2.09	Weather—fine. A heavy storm of rain at head-quarters on 20th. Recent rain has done good, but more required. All standing crops look well. <i>Bhadoi</i> being harvested with fair outturn. General health good.
42	Lohardugga " 24 "	1.78	Weather—seasonable; cool. Slight rain during the week; more wanted. Prospects of rice good. Prices as before. Cholera still prevails; otherwise general health good.
43	Singbhoom " 23 "	3.35	Rain all over the district has done much good. Weather cool and pleasant. Good reports of crops. Ploughing for <i>rabi</i> going on and autumn crops being reaped. General health good.
44	Manbhoom " 24 "	0.82	Weather—much cooler. More rain still wanted in parts of district for high land paddy. <i>Ilkang</i> and other autumn crops being harvested with good outturn. Public health good.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns missing, the corresponding spaces in the total rainfall column are left blank.

CALCUTTA, the 27th September 1887.

**SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE
23RD OF SEPTEMBER 1887.**

At the close of the previous week the meteorological conditions were almost normal over the greater part of the province, except that pressure was rather lower than usual. A fairly steady monsoon current was blowing from the Bay of Bengal, and easterly and south-easterly winds were reported from almost all stations. Conditions were almost unchanged on the 17th, and on this day light but rather local rain was reported from the greater part of the province. On the 18th the changes of pressure over the province were a little irregular, and at the western stations winds became rather westerly, showing that the westerly current blowing from the Arabian Sea was again beginning to influence Bengal. On the 18th rainfall was rather irregularly distributed, and the greater part of the centre of the province received little or no rain. On the 19th pressure commenced to fall, the fall being rather large in North Bengal and Assam, and the area of lowest pressure at the Bay stations was transferred to the north-west angle of the Bay and the Orissa Coast; the westerly winds strengthened, and winds became westerly and south-westerly over the greater part of the province. On this day also general and rather heavy rain was received in Behar and North Bengal. On the 20th a brisk fall of pressure took place over parts of South-West Bengal, and pressure became distinctly low, a band of low pressure apparently stretching from South-West Bengal through West Bengal into Behar. Winds also commenced to show a very faint tendency to circulation over Bengal, and rain again fell over a considerable part of Behar and North Bengal. On the 21st pressure continued to fall, and a low pressure area was formed over the whole of the centre of the province, while on the 22nd a distinct barometric depression accompanied by cyclonic circulation of winds had formed over the head of the Bay, the centre being only a short distance south of the Sunderbuns and between Saugor Island and Burrisal. On the 23rd the depression was still only of slight intensity and had scarcely moved its position, and its centre on this day was probably almost over the coast line of the Sunderbuns. During the formation of the depression the monsoon current was as usual prevented from blowing over the province, and rain almost ceased over the interior of Bengal, but at the stations on and near the coast, which were affected by the depression, rather heavy rain fell at the close of the week.

The rainfall of the week has therefore again not been heavy, and all districts have received amounts averaging from about one-and-a-half to two inches. The rainfall has thus been about equal to the normal amount in South-West Bengal, Chutia Nagpur and Behar, while it is seriously in defect in East and North Bengal and Orissa.

Pressure—During the previous week averaged about a tenth of an inch below the normal, but for the greater part of the present week pressure was increasing, and it was only at its close that the southern districts of the province were affected by the formation of the depression at the head of the Bay. The mean pressure for the present week has thus been much more nearly normal, and though pressure is at almost all stations below the average, the variations as a rule are not larger than two or three hundredths of an inch. Taking only those stations into consideration from which observations have been received for a considerable period, and which therefore yield reliable averages, the mean pressure of the whole of Bengal for the week has been 0·021 inch below the normal, and the extreme variations are only from a defect of 0·041 inch at Jessore to an excess of 0·004 inch at Cuttack. In Assam pressure has been more largely below the normal, the defect varying from 0·037 inch at Sibsaugor to one of 0·071 inch at Dhubri, the mean defect for Assam for the week being 0·054 inch.

Temperature—The variations of temperature from the normal of the week are small and in no district equal a degree. In East Bengal and North Bengal the mean temperature has been above the normal by 0·3° and 0·2° respectively, but all other districts show defects. In Orissa, North Behar and Chutia Nagpur the defects are small and are less than half a degree, but in South-West Bengal and South Behar the defects are larger and equal 0·7° and 0·9° respectively. For the whole of Bengal temperature has been in defect by 0·3°. In Assam temperature has been above the normal by 0·8°.

Rainfall—Has been moderate in amount in all districts during the week, and the average rainfall in each of the seven meteorological districts has varied between one-and-a-half and two inches. Rainfall is, however, now becoming decidedly less frequent, and the average number of rainy days in the week has been from 2 to 3 in the various districts. Compared with the normal fall for the period, the rainfall in East Bengal has been most largely in defect; North Bengal has also been largely in defect, while in Orissa the defect has been a little less pronounced. The other districts have received falls nearly equal to or in excess of the normal, but while in South-West Bengal and North Behar the excess amounts are very small, in South Behar the excess is considerable. Compared with the normal, and expressed as a percentage of that amount, the actual rainfall in the seven meteorological districts during the past week has been—in Orissa 62 per cent., in South-West Bengal 101 per cent., in East Bengal 50 per cent., in North Bengal 55 per cent., in North Behar 106 per cent., in South Behar 130 per cent., and in Chutia Nagpur 93 per cent. Taking each of these districts as having an equal value in the calculation, the

average rainfall of the province for the past week has been equal to 85 per cent. of the normal.

The rainfall for the whole of September has been generally deficient in Bengal. This can be most clearly seen by giving the figures representing the rainfall for each week in each of the seven districts expressed as a percentage of the normal fall.

Rainfall expressed as a percentage of the normal fall.

Meteorological District.			From 2nd September to 9th September 1887.	From 9th September to 16th September 1887.	From 16th September to 23rd September 1887.	Average of the first three weeks of September.
Orissa	23	142	62	76
South-West Bengal	42	144	101	96
East Bengal	31	128	50	70
North Bengal	173	36	55	88
North Behar	122	20	106	83
South Behar	102	63	130	98
Chutia Nagpore	58	112	93	86
Average for whole province			78	92	85	86

All districts except South Behar and South-West Bengal have therefore received a decidedly defective rainfall during September, and in Orissa and East Bengal, and in the northern districts of the province, the defects have been large.

Taking up the rainfall of the province rather more in detail, during the week under review the following districts have received particularly scanty falls:—parts of the Hooghly, Burdwan, Jessore, Khoolna, and Bankoorah districts, the whole of the Furreedpore, Dacca, and Commilla districts and part of Mymensingh, and the Maldah district. The extreme scantiness of the rainfall at some of the stations in East Bengal during the week may be shown by the fact that in the Furreedpore district the average fall for the week has been 0.20 inch, the normal fall for the period being 1.80 inches; in the Dacca district the actual fall has averaged 0.55 inch against the normal 2.67 inches; and in the Commilla district the fall has averaged, so far as the reports have been received up to the present, about a tenth of an inch against the normal 2.63 inches. In fact, since the first of the month up to the 18th the station of Commilla has only received 2.55 inches, while the normal fall is 9.61 inches, and since the 15th of May it has only received 40.91 inches, the normal for the period being 69.30 inches. Chandpore also in the Tipperah district has only received 2.23 inches of rain since the 1st of the month up to the 22nd against the normal fall of 10.24 inches, and since the 15th of May the actual fall has been 32.27 inches against the normal fall of 70.93 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 23rd of September 1887:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

The mean pressure of the seven days

The average pressure of the corresponding period for 24 years, S. G.'s Office

The total number of hours of bright sunshine

The maximum possible number of hours of sunshine

The mean temperature of the seven days

The average temperature of the corresponding period for 24 years, S. G.'s Office

The extreme variation of temperature

The maximum temperature

The highest velocity of the wind in one hour

The highest pressure of wind on one square foot

The mean relative humidity

The average relative humidity of the corresponding period for 24 years, S. G.'s Office

The total fall of rain from 18th to 24th September 1887

The average fall of the corresponding period for 24 years, S. G.'s Office

The total fall from 1st January to 24th September 1887

The average fall of the corresponding period for 24 years, S. G.'s Office

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lightning, d dew.

A. PENLER,

for Offg. Meteorological Reporter to the Govt. of India.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 1st October 1887.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.	
BENGAL.				
Western Districts.				
BURDWAN DIVN.	1 Burdwan, Oct. 1, '87	0.63	Weather—seasonable. Prospects of crops favourable, but more rain wanted. Public health generally good. Cholera reported from Ryna thana. Price of rice stationary.	
	Culna	1.37		
	Cutwa	1.59		
	Rancegunge	0.01		
	2 Bankoora „ 1, '87	0.09		
3 Beerbhoom „ 1, '87	0.57	Weather—seasonable. Rain very much wanted in all parts of the district. <i>Amun</i> crop on high lands will be damaged if it does not rain soon. Prices stationary. Public health good.		
	Rampur Haut		1.75	
4 Midnapur „ 1 '87	0.25	Weather—dry generally. Prospects of crops hopeful, except partly in thanas Pataspur and Bhagwanpur in Contai sub-division. More rain wanted in Ghatal sub-division. Public health good.		
5 Hooghly „ 1, „	0.38	Weather—hot. State and prospects of all crops favourable, though in places more moisture is required for winter rice. Cholera reported from one village in Serampur sub-division.		
	Scrampur		1.97	
Howrah „ 1, '87	0.14	Weather—sultry with clear sky. Prospects of rice crop fair, but more rain required. Sugarcane on high lands doing well. <i>Aus dhán</i> and jute harvest continues.		
	Oolooberiah		Nil	
Central Districts.				
PRESIDENCY DIVN.	6 24-Parghas., Oct. 1, '87	0.44	Weather—seasonable. <i>Aus</i> harvest practically over. Sugarcane and jute doing well. Prospects of <i>amun</i> crop have improved with the recent rain. Public health generally good.	
	7 Nudda „ 1, „	1.73		
	Kushtia	3.62	Weather—hot with showers, especially in the early part of the week. Prospects good. <i>Amun</i> , sugarcane, <i>til</i> , <i>arhar</i> and chillies doing well. Flood level falling steadily. Public health good, except that there is still a good deal of fever.	
	Meherpur	4.99		
	Chundanga	4.85		
	Ranaghat	3.12		
	8 Khoolna „ 1, '87	1.88	Weather—hot with some rain in the first part of the week. Prospects continue favourable owing to recent rain. Public health good.	
	9 Jessore „ 1, „	2.91	Weather—hot and bright after good showers. The early morning is tolerably cool. Harvesting of <i>aus</i> is finished. Prospect of <i>amun</i> is good, and the late showers seem to promise a good deal of benefit towards this crop. Public health good.	
		Jhenidah		2.38
		Magurah		1.2
Narail		2.9		
10 Moorsheadabad „ 1, '87	7.65	Weather—seasonable. Prospects of <i>amun</i> good. Sowing of <i>til</i> and <i>kalai</i> going on. Public health generally good.		
	Kandi		0.59	
	Jungipur		0.58	
			0.71	
RAJSHAHY DIVN.	11 Dinagepur „ 1, '8	1.01	Weather—seasonable. State and prospects of <i>haimanti</i> paddy good. Harvesting of jute nearly finished. Rice 18 to 26 seers per rupee.	
	Toukurgaon	0.51		
	12 Rajshahye „ 1, '87	1.88	Weather—clear and bright. Prospects of <i>amun</i> paddy and other crops continue generally good. Public health fair.	
	Nattore	2.70		
	Nowgong	1.96	Weather—seasonable. Transplanting of <i>amun</i> is over. Harvesting of jute continues. Public health fair.	
	13 Rungpur „ 1, „	1.69		
	Nilphamari	1.07	Weather—cooler day by day. Sunny days with cool winds. Transplantation of <i>amun</i> is nearly over. Harvesting of <i>aus</i> and jute-steeping going on. Public health generally good. Cow-pox continues to be reported from Sherpur thana.	
	Gaibanda	0.85		
	Kurigram	1.26		
	14 Bogra „ 1, '87	1.41		
Sherpur	2.92	Weather—seasonable. Rivers have fallen. Public health and prospect of crops good.		
Nowkhilla	2.65			
15 Pubna „ 1, '8	1.45	Weather—fine on the whole. State and prospects of crops good.		
16 Darjeeling „ 1, '87	2.66			
17 Julpigoree „ 1, „	2.64	Weather—mornings and evenings cool; days warm. Prospects of crops good. Lands are being prepared for winter crops. Cattle-disease yet prevails in Rajganj and Moynagori. Public health good.		
Eastern Districts.				
Dacca Division.	18 Dacca, Oct. 1, '87	Nil	Weather—seasonable. Harvesting of jute nearly completed; that of <i>aus</i> paddy rapidly going on. Cultivation for mustard and pulses commenced. Prospects of crops good. Public health fair.	
	Manickgunge	0.81		
	Munshigunge	1.04		
	Nraingunge	0.7		
	19 Furreedpur „ 1, '87	1.42	Weather—cloudy with occasional showers. Prospects of <i>amun</i> crop good. Public health good. Rivers falling.	
		Goalundo		1.21
	Madaripur	0.77	Report not received.	
	20 Backergunge		
	21 Mymensingh Sept., 30, '87	3.55		Rain on four days; 1.68 inches on 29th. Weather cloudy. Prospects of crops good.
	Jamalpur	1.34		
Kishoregunge	0.67			
Attea	0.80			
Netrokona	3.47			

No	District and date of return	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date
BENGAL—contd.			
<i>Eastern Districts—contd.</i>			
CHITTAGONG DIVN.	22 Chittagong, Oct. 4, '87	0.6	Weather—seasonable. <i>Amun</i> and sugarcane thriving. Cholera reported; public health otherwise good. Prices stationary.
	23 Noakholly Sept. 30, "	2.50	Weather—seasonable. Prospects of <i>amun</i> fair. New <i>aus</i> rice has come to market, and its price has fallen to 27 seers per rupee. General health fair.
	24 Tipperah " 29, "	1.23	Weather—seasonable and occasionally cloudy. The little rain has done some good. Prospects of crops still pretty fair. Paddy on comparatively high lands has begun to suffer, and unless there is heavy rainfall soon the crop in general will be considerably affected.
	Brahmanbariah " " "	1.43	
	Chanapur " " "	0.50	
CHITTAGONG DIVN.	Chittagong Hill Tracts, " 27, "	3.67	Weather—rainy during the middle of the week, cold at night. Foggy this morning (27th). Cotton doing well. Harvesting of joom paddy continues. Transplanting of plough-paddy over. Prospects of sugarcane good.
	25 Hill Tipperah " 28, "	1.95	Weather—rainy and stormy. Prospects of <i>amun</i> paddy and sugarcane fair. Jute and joom crops being reaped. Public health good.
BEHAR.			
PATNA DIVN.	26 Patna Oct. 1, '87	Nil	West wind; sky clear. Prospects of rice crop fair, but more rain wanted on high lands. <i>Rahur</i> and cotton doing well. Lands being prepared for other <i>rubbi</i> crops. No cholera cases reported from Behar sub-division.
	27 " " " 1, "	Nil	Weather—fair. Paddy suffering for want of rain. Cholera and fever reported from some stations.
	28 Shahabad " 1, "	Nil	Weather—seasonable. Harvesting of <i>bhadoi</i> crops almost completed. Paddy coming up well, but more rain wanted. Public health generally good. Prices stationary.
	29 Darbhanga " 1, "	0.05	Weather—days hot and mornings cool. Harvesting of <i>bhadoi</i> completed. More rain needed for rice crop, which is, however, very promising. <i>Urid</i> coming up well. Price of common rice averages 19 seers per rupee. Public health generally good. Some fever about.
	30 Mozufferpur " 1, "	Nil	Weather—clear. Rain wanted for rice crop. Harvesting of <i>bhadoi</i> in progress, and prospects of all crops excellent.
PATNA DIVN.	31 " " " 1, "	Nil	Weather—days hot, mornings cool. Prospects of crops continue good, but rain much wanted for <i>aghani</i> paddy. Fields are being prepared for <i>rubbi</i> sowings. Public health on the whole good.
	32 Champaran " 1, "	Nil	Weather—hot. Harvesting of <i>bhadoi</i> crops nearly completed. Prospects of <i>aghani</i> crops promising, but more rain wanted on high land. Mahai of indigo finished. Prices stationary. Public health good.
	33 Munger " 1, "	Nil	Weather—days hot, mornings cool. Prospects of winter rice continue promising, but rain still wanted for a good crop. A few cases of cholera reported from the Sudder and Begoserni sub-divisions. Prices easy.
	34 Begoserni " 1, "	1.12	Weather—warm, but getting cool in the morning. Sky clear. Harvesting of <i>marus</i> completed, that of early rice going on with good outturn. Late rice doing well, but a good shower of rain wanted.
	35 Patna " 1, "	Nil	Weather—continues hot. <i>Bhadoi</i> has been harvested. <i>Aghani</i> promises well. Lands for tobacco and rapeseeds are being prepared.
PRESIDENCY DIVN.	36 Arrah " 1, "	0.23	Weather—fine and hot. Harvesting of <i>bhadoi</i> nearly completed with good outturn. Winter paddy still very promising, but more rain will be needed.
	37 " " " 1, "	0.22	
	38 " " " 1, "	0.23	
	39 " " " 1, "	0.51	
	40 " " " 1, "	0.5	
PRESIDENCY DIVN.	41 " " " 1, "	Nil	Weather—northerly breeze; clouds gathering; days hot. Indian-corn harvested. Rain generally wanted for all crops. Public health fair.
	42 " " " 1, "	1.18	
PRESIDENCY DIVN.	43 " " " 1, "	0.24	
	44 " " " 1, "	0.24	
ORISSA.			
ORISSA DIVN.	35 Cuttack Sept. 30, '87	Nil	Weather—fair. <i>Beali</i> being cut and gathered. <i>Sarad</i> growing well. Cases of cholera still reported; otherwise public health good. Price of rice unchanged.
	36 Pooree " 29, "	0.04	Weather—hot and cloudy. Weeding of <i>sarad</i> in progress. Sufficient rain wanted for <i>sarad</i> crop. Common rice 20 seers 8 chittacks per rupee in Sudder sub-division, and 20 seers 2 chittacks in Khoorda sub-division. Public health good.
	40 Balasore " 30, "	0.30	Weather—seasonable. <i>Beali</i> paddy being harvested. Weeding of <i>sarad</i> crop has greatly advanced. Prospects of crops generally good. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
CHOTA NAGPORE DIVN.	41 Hazaribagh, Sept. 30, '87	Nil	Weather—bright. Rain urgently wanted all over the district. Rice on higher lands reported to be suffering for want of rain. <i>Bhadoi</i> being harvested with fair outturn generally. General health good.
	42 Lohardugga Oct. 1, "	Nil	Weather—hot and cloudy. Rain urgently required all over the district. Prospects of crops depend on further rainfall. Prices steady. Cholera decreasing.
	43 Singbhum Sept. 30, "	Nil	Weather—clear; cool in the morning and hot during the day. In some parts want of rain for paddy crop is very keenly felt. <i>Gora dhan</i> harvested; outturn estimated at 12 annas on average. <i>Bhadoi</i> crop reaped with fair outturn. Sugarcane thriving. Cattle-disease in Seraikella, and fever to some extent in thanas Chybassa and Seraikella. Public health otherwise good.
	44 Manbhum Oct. 1, "	Nil	Weather—cool and pleasant. Rain urgently wanted for high land paddy. Public health fair.
CHOTA NAGPORE DIVN.	45 " " " 1, "	0.09	
	46 " " " 1, "	0.09
